Well, I'm trying to but it is a difficult environment where everyone
spells out the rules of what "should have been stated" some time
after a debate-discussion-argument has started. :-)

In another thread there is chastisement for "not stating numbers"
which were clearly stated in the beginning, then more criticsm
for "not stating correct numbers" about those "non-existant
numbers."

Now you are stating that the FCC's EM spectrum auctions are
"contracts awarded to the lowest bidder?" Sorry, I can't find
that in the FCC Handbook. Please explain.

I'm having trouble finding information on the FCC website that
tells of "ham band auctions" that may take place in the future.
Any tips or information on such future activities would be
appreciated. Thank you.

Chuck Yeager's Bell rocket plane was named "Glamorous Glennis."

I don't know if he ever had a P-51 of his own, but it's not in the "survivors" list of Mustangs at:

www.p-51mustangs-aliveandwell.com

The closest one there is "Glamorous Gal," a P-51D-30NA, tail number N251HR owned by Howard Ross.

Nursie is trying to waffle on this one by trying to change the subject
in a following message in this thread.

I'm still waiting to hear who (or whom) I was supposed to meet
in person in the last year, last two years, or last three years
who is also a poster in this newsgroup.

I remember anyone I've talked to in person going back at
least ten or more years.

I think nursie is seeing people that aren't there...

Oh, my, bigbadassmarine is all a-twitter over profanity!!!!   :-)

[no wonder the USMC let him go...]

Nursie has to show actual, real quotes of the above "liberal use of
profanity."  Emphasis on liberal.

[you are unaffected by criticsm but the word is "ineffective," nursie]

>>A lot of discussion on Marine Radio isn't about ham radio at all.
```

>
>   It is when that operation fosters illegal operations that migrate to
>Amatuer allocations.

There are no amatuer allocations in US radio.

Nursie consistently writes on amatuer radio. Tsk, tsk, tsk.

>   If you think that's the reason any of us are adamantly against the
>proliferation of CB type operations on unauthorized frequencies, you are a
>bigger idiot than I thought, and Lennie, I already know that you're a pretty
>big idiot.

Nursie has a vivid imagination...and no life experience awareness
of the entire 42 year span of CB.

>   Putz.

Nursie uses this word a great deal. It is a not-nice word of
Yiddish equivalent to the colloquial American "dickhead."

Whether written in Yiddish, English, or American, it is still
profanity. Since nursie uses it so much, nursie looked in a
mirror when charging "liberal use of profanity."

Tsk, tsk, tsk.

<snip to another item taken out of context>

>>...now why must there continue to be a morse code test for
>>amateur radio licences other than ITU-R S25.5?
>
>   YOU are the ONLY one arguing this, Lennie.

Incorrect. Faulty. Error. Mistake.

>The rest of us have tried to
>move on, but you keep INSISTING that "EVERYONE" is trying to somehow retard
>the growth of Amatuer Radio by insisting on keeping code testing.

Again incorrect. Faulty. Error. Mistake.

Test element 1 for a US amateur radio license examination is
still code testing, still required for a General or Extra class
license.

>   Like it or not, just about everyone here EXCEPT YOU has accepted the
>fact that the FCC will dispense with code testing after the treaty has been
>ammended and ratified.

Once again incorrect. Faulty. Error. Mistake. Tsk, tsk, tsk.

Firstly, the "fact" is nothing of the kind. It is just a supposition by nursie and one or two others in here.

Secondly, the FCC has said nothing about "dispensing with a code test in the future." The FCC said only that, in 1990 and 1999, that the code test is not considered of sufficient value for the FCC's purpose of licensing amateurs as part of its amateur radio regulation task.

Thirdly, the current ITU-R WRC agendas for the whole conference in 2003 and the preliminary conference in 2002 have nothing about S25.5 (commonly and mistakenly called "the treaty") alteration, modification, or changing.

Note: Only S25, the entire body of ITU-R amateur radio simplified standards is indicated as being an assignement of Study Group 8.

>   We forgive you for being ignorant, Lennie.
>
>   We forgive you for being arrogant.
>
>   We even forgive you for being intolerant.

Nursie should do something about those multiple personalities.

>   But the "Persistantly Nagging" thing is really getting to be a problem.

Well now, nursie does admit to her obsession. There is always optimism for a cure when the patient recognizes her disorder.

>   Again, whether any one of us particularly like or dislike the end of
>code testing, we are getting on with the business of BEING Amateur Radio
>operators.

Are all of nursie's multiple personalities officially and credentially licensed or just one? Interesting law condition which might even tax the fine legal minds mumbling in here.

>That gives us a LOT of room to navigate in, from the basement of the RF
>spectrum to daylight.

Actually, not as much as claimed. US radio spectrum allocations go from 9 KHz on up to 300 GHz. [anything above 300 GHz is not allocated] There are no allocated US amateur frequencies below 1800 KHz.

The "basement of RF" is ELF used by USN submarines for world-wide underwater communications (by data, not CW). Nursie has made no claims of USMC experience in ELF.

"Daylight" could be roughly 1000 nanometers (actually the IR component of daylight) at a frequency of about 300 THz. Several have wondered if nursie has seen any daylight.

> On the other hand, since you refuse to get a license, you are stuck with Part 15 devices, CB radios and TV remotes.

There has never been any "refusal to get a license." That is in nursie's vivid out-of-body imagination working overtime.

My discussion, when not spent 95% refuting nursie's erroneous and false charges, is about the elimination of the code test for an amateur radio license.

Also, nursie's list of radio services useable without an amateur radio license is woefully inadequate. All of broadcasting, private land mobile radio, aviation radio service, several fixed land radio services do not require a license to operate...just for starters. Title 47 Code of Federal Regulations explains it all...dull reading for those liking Archie comic books but it is the law for US civil radio.

> Once again, Lennie the Licenseless is relagated to being on the outside looking in...doomed to be the sopping wet kid with his pitiful nose pushed up against the bakery shop window.

Now, now, nursie, you are getting all twittery and fluttery again.

There is no "doom" or other so-so word pictures, nor any personal gain in arguing for the repeal of the amateur radio code test. Nursie apparently cannot understand that simple fact and lets her vivid imagination (or hallucinations?) rule the four brain cells that process reality.

> Lennie is the Darth Vader of RF.

Nursie runs rampant with fiction again. :-)

Has nursie ever taken the temp of an SSME? Made or even held a space-rated payload? Communicated with a station ON the moon?

No? Poor nursie.

> We all know that inside is a nice guy

>who WANTS to be a part of the party, but he has been too long swayed by the
>Dark Side...

Oh, my, truly hallucinogenic! My advocacy in here is to eliminate the amateur radio code test. The TEST. Hello? Does nursie suffer from too much QRM at her QTH? Too many trips to the white room medicine cabinet?

>It won't be until his demise that he finally realizes that it
>COULD have all been his.

Nursie is not immortal although her other persona (as the Emperor) thinks she is. It is strange that a medical health professional (assuming hospitals actually pay her) has such a preoccupation with death and mortality in others...and trying to use that against them. :-)

Is an amateur radio extra class license the epitome of nursie's life, the "all?" Oh, my, what a limited narrow view.

Gestalt ain't what it used to be. :-)

How do you know? There is a school of thought that says otherwise.

Generalizations are dangerous. So is ignoring a large body of experience which shows trends that are dangerous. Many homosexual men are known to prey specifically on young boys. Should parents just ignore that fact since they are a minority of homosexual men?

It always amazes me that so many highly educated people are incapable of seeing the larger picture. And in so many different ways. Cecil thinks that just because ham radio is a hobby it can't be serious or dangerous. You'd think that he doesn't know that situations can change very quickly. And Jim thinks that just because he never had an interest in CW that he could possibly ever have a need to use it under any circumstnces.

Nor have thgey since the introduction of factory built units. So you then believe that there is never a need for a ham to be able to build anything at all. Very curious. If you had your way, nothing not on the leding edge would be allowed to remain in existance. You come across as the most zealous of zealots.

It's nice if they do
> but it is not necessary just as it was not necessary for you to build
> your own tubes.

Your comparison is without merit. Building a vacuum tube and constructing a working radio of discrete componants are light years apart.

> As the level of integration goes up, the necessary

Nonsense. The stuff builds itself?

>

Ah, so you believe that no ham should be required to fill any function other than the most important one. We see. Whatta concept.

Cecil the Lame scores again with a slap shot to the audience.
I already have far more vacuum tubes I could expect to use any any
conceivable circumstances. What hams need is some of the expertise to
use thosetubes and also some transistors to build a working radio set.
Transmitter and receiver. I was looking at a 50's CQ magazine articlethe
other day where a ham built a small transciever for working 540 and 80
meter CW. It had a VFO builtin and a Superheterodye receiver. It used
four vacuum tubes. I was impressed.
You couldn't do that with four transistors.

How much bonus money is the ARRL Board paying you for you to imply something to the readers by making a statement like that? For the Board to say they are not going to propose eliminating code, but they won't oppose a change, is the same thing.
That's like saying: we're not going to set the building on fire, but if one starts, we'll let it burn.

It's either the sin of commission or the sin of omission. I guess the ARRL will get what it wants, to dumb down amateur radio further. This time it won't have to lift a finger to do it. They can come out looking like the good-guy. Thank Ed, checks in the mail.

Hey, Cecil, I saw this in a local paper today and, for some reason, immediately thought of you.

A 24 year old Marshville (NC) man was charged April 8th with shoplifting and disorderly conduct. <name withheld> entered a Conway convenience store and attempted to purchase an alcoholic beverage. When the clerk refused to sell (due to a ban on Sunday alcohol sales), the man berated the clerk, threw money on the counter and left with the alcohol anyway. The clerk called police with a description of the vehicle. Due to the encouragement of a female companion who was waiting in the car, however, <name withheld> shortly reentered the store and put the alcohol back on the counter. Police arrived a few minutes later to arrest the suspect. The suspect was released without bail on a notice to appear citation.

It appears you're not the only person who feels he has inalienable right to buy alcohol on Sunday? However, you can bet your sweet bippie that <name withheld> won't try to exercise that right in exactly the same way again.

Hey, no need to ever apologize for talking about radio with me - I truly enjoy the subject. However, I haven't been too involved with CB over the last few years. In fact, all I have right now is the obligatory, but rarely used, CB radio in my SUV. All other equipment has been put away except for the antenna outside the house (which I use for shortwave and scanner reception at the moment - an Antron makes a good antenna for this). But, I did have a blast with CB years ago and do plan to get involved again one day. Take care, Bert.

Bill Sohl wrote:

> [snip] Me thinks in the scope of radio
> enforcement, any half baked attorney
> would clean the clock of a local cop who
> couldn't show the required knowledge. [snip]

What "required knowledge," Bill? A cop doesn't have to be an expert to recognize and gather evidence. For example, a cop doesn't have to be a gun expert to pick up stray bullets or shell casings off the ground for evidence. Or a gun expert to recognize a sawed off shotgun. Or a medical expert to recognize an injury has occurred. Or a alcohol expert to recognize the intoxicated. Or a drug expert to recognize illegal drugs. Or an electronics expert to recognize what a television is before deciding it is stolen. And the same with almost everything else the cop does.

In whatever situation, all the cop has to have is enough knowledge to do his job, which is to gather evidence properly or perform whatever test is available properly. If expert testimony is needed, again that usually comes from outside law enforcement circles.

And there is no reason to believe that it will be any different when it comes to enforcing CB regulations. The only skills a cop will need is the ability to recognize an illegal device and gather it for evidence. And, as I've already said in another message, it does not take great skill or knowledge to do that. If expert evidence is needed, that can be obtained by having the device tested by an expert after it is collected from the scene. And, in most cases, that expert will not even have to show up in court - his report will stand unless challenged.

Oh, come on, guys (Ed, Richard, Larry, Cecil, and Dick). Read the darn subject line. When Jim said to that "we need to eliminate code entirely," he was obviously addressing the subject (code testing). He even mentioned "classifications based upon code speed," which is a testing issue having little to do with people using code on the radio. And he is right - when it comes to code testing, code probably should be a thing of the past.

It says what it says. And there certainly are those who would outlaw CW
because it makes them feel bad or some other really good reason. Denial
runs deep.

Don't you love these guys that sign their artwork? Can't fault a guy for voicing his opinion, that's how we all learn, but Jeez, have the balls to admit who you are!

I wonder what suggestion or implementation all the folks that love to bash the new rules came up with as a solution to the problem of declining participants. I don't think I've ever read any on the groups. I guess they're too busy protecting their turf. Maybe a ham boot camp that includes PT, engineering, 25 wpm code, demerits, cigarette smoking, etc., all on the prospect's nickel.

I propose a new class of license, the "LORD" Class. Just be able to have a closed mind, no solutions, pass the old advanced test, be able to work at a minimum of 25 wpm and you will have "Lord" privileges. You can do what you please, say what you please, buy what you please, go as fast as you please and not be required to help anyone or anything - ever! Your word will be treated as scripture and all will bow at your presence! Having any ticket less that Lord Class will tag you as incompetent (with a Good Buddy armband requirement), give restaurant owners the right to not serve you and dogs permission to bite you.

I'm not saying that the rule changes were good or bad, we'll all admit the overall abilities of the older hams are far above many of the new folks, but did any of you good ol boys ever think that by relaxing the code requirements, interest in the hobby would increase? How many folks have gotten their tickets under the new rules and advanced themselves because of a greater desire to participate? Come on, raise your hands! I don't feel anyone thinks less of you because of the new rules, but I can tell you that I fully respect the knowledge and talent you have, which is far above mine. At this point I can't keep up with your conversations, but you know what? One day I will. How about that? the "new" rules may have given birth to "fans"!

I do not get paid any bonus to participate on rec.radio.amateur.policy.

Do you have a particular reason to want to make your post in secret? You raised some points well worth discussing and you need not be ashamed of them.

I have to chuckle at the use of the "polite" term "figure of speech." It would be more accurate to call it an exaggeration.

> But there ARE lots of trained (and not so well trained) monkeys on the bands.

Let me correct that; it would be more accurate to call it an insult.

Have you memorized those 1000 Russian definitions in a weekend to show us all how easy it is to learn without learning? I thought not...

>From: Dick Carroll dixie@townsqr.com

>I can't be responsible for your refusal to read in detail all the NCI
>postings of the past few years.

I have read most of them in detail, Dick, and those that I have read have been very clear that NCI does not oppose the use of Morse code on the ham bands.

Can you provide references to those posts "by NCI" that state otherwise?

> You're the guy who just can't believe that the question pool exams can't be
> passed without learning all the detailed material ...

I am the guy who believes that it is possible for someone to memorize 1000 questions without learning anything, but that most hams do what I did when I got my General -- a combination of learning, memorizing, lucky guessing and just plain hoping that some questions are not on the exam. I have posted this view a number of times. Did you miss them, or are you making up an "interpretation" of what I said to bolster your point?

>and many study guides show only the barest minimum of information,

The most popular study guides are the ones that give explanations for why the correct answers are correct.

Maybe the study guide for the General should be reduced to 16 pages like it was in 1964... Instead of those "barest minimum" pages, we now have a Tech study guide of over 200 pages...

> and a number of posters here have stated cagorically that they
> passed the tests 'studying' exactly that way.

"A number?" I don't think that "a number" of posters has discussed what methods they used to pass their tests, and of those that have, I can think of only two who claimed that they didn't learn anything, and one of those was talking about his General back in the 50s. Of the rest, most seem to fall into my category of having learned/memorized/guessed.

>You are deliberately turning your back to the realities of the
>situation

I am deliberately disagreeing with you, Dick.

>That sets prececent for your attitude toward NCI and their
>goals.

I am not a member of NCI. ARRL could care less what organizations I belong to, as long as I do my job.

I operate a fair amount in the lower portion of the HF bands, Dick, and I
haven't heard this mode war.  Can you provide some examples of when and where
it occured?  What did Cecil miss on the air?

You can prove it by memorizing those 1000 Russian words in a weekend. But in accordance with the above, you can do so 333 words at a time. If it is as "easy as falling off a log" as you once said, I am sure you would do it just to make your point.

> Worse, you refuse to believe it when I and many others tell you outright,
> from both watching it happen and from those who have done it, that it is
happening.

"Many" others? I can think of only two other people who have made that claim here, Dick. Do 3 make a "many to you?"

Did you know they did it by reading their secret thoughts, or do you have something a bit more concrete for this one?

>> Tube therey should be part of the basics today?
>> Why?

> For the same reason that Morse code should be.

Do you really believe that Morse code testing and the testing about tube theory should be on the same par? If so, do you want to include enough tube theory that people need to spend dozens, if not more, hours to learn it and that they have to answer 7 of the 10 questions about this theory correctly or they don't pass, or do you want to revise the Morse code testing so it can be passed after an hour or two of study and if the applicant gets all the questions wrong, he or she will still pass if the overall score is >75%?

>Cecil the Lame scores again with a slap shot to the audience.

Uh, oh, this is devolving to gratuitous insult. ..

>What hams need is some of the expertise to
>use thosetubes and also some transistors to build a working radio set.

The 16 pages I studied to pass my General in 1964 did not give me the expertise to build a working radio set. Neither did the Extra I passed in the 70s. Why are you asking that hams today have to achieve more than you or I did? I think I turned out okay after studying 16 pages to get all amateur privleges.

>I was looking at a 50's CQ magazine articlethe
>other day where a ham built a small transciever for working 540 and 80
>meter CW. It had a VFO builtin and a Superheterodye receiver. It used
>four vacuum tubes. I was impressed.

In the 1950s, only a small percentage of hams could have designed that and they could not have designed that on the basis of having passed their Extra Class exam. They learned more electronics than was on the exam, either professionally, or as a result of what they did within Amateur Radio.

>You couldn't do that with four transistors.

You could do that with one IC... And, like the simple construction projects of today, that 4-device circuit was the exception that disproved the rule.

> Cecil: It is still completly possible for hams to build their own
>stations using discrete components, it is done all the time. But NOT by
>many recent licensees who memorized the question pool..

And you know this how? I could not have built a station from scratch as a result of passing the tests I took in the 60s to get my license. I needed a bit of trial and error.

And today, it is lots easier than it was then to build equipment.

The real fallacy in this 5-miles-to-school scenario is that most "old time" hams built their own equipment. They owned Hallicrafters or Johnson commercial gear, for the most part. Those that did build probably built a Heathkit (connect the red wire to pin 3; there are three wires on that pin now; solder them).

> Ah, so you believe that no ham should be required to fill any function
>other than the most important one. We see. Whatta concept.

Hams are not required to fulfill any function, Dick. To require a ham to do emergency communications (or practice thereof) would require a rule that stipulates that a ham must conduct N hours of emergency communication within his or her license term. To require a ham be able to build would require a rule that stipulates certain construction achievements. Those requirements have never existed in the US, to my knowledge, nor have the tests of any era I have direct knowlege of tested the ability of the applicant to do the type of construction you are discussing.

Ed,

Hans proposed a substantial simpler Part 97.

To which I replied: "Too simple, never fly".

Larry

Here in NJ, in Bergen County and a few other surrounding counties, not only the cell phones were out during Floyd, but landline as well.

A major control point for the phone company was under water. You could only make landline calls within your local switch's area. There was NO linking between central offices.

Stayed that way for a few days.

As noted in other posts about CPR, well, CPR does save more lives and does it on a day-to-day basis.

I just happen to own a company that teaches CPR and the use of defibrillators to the general public, corporations, organizations and to anywhere where people tend to gather.

Considering most state laws require reporting and medical oversight everytime an automatic external defibrillator (AED) is used, we have already seen our students save lives.

What's probably better is to have an adult conversation about code vs. no-code, cut the personal attacks out except for emailing each other directly, and yes, learn CPR as well. While you're at it, learn how to use an AED along with the CPR.

For every minute that passes from the time cardiac arrest starts, approximately 7-10 percent of survivability is lost (AHA statistic).

And of course, as we ALL know, any website that Lennie quotes is THE definitive source of information, irrefuteable at any level.

While perhaps not his personal aircraft, Chuck has recently appeared in several advertisements stooping in front of a Mustang with his wife's name on it.

>The closest one there is "Glamorous Gal," a P-51D-30NA, tail
>number N251HR owned by Howard Ross.

And while we are at it, Oh Malcontented One, WHAT does all this have to do with AMATEUR RADIO POLICY, Lennie? Not that I care, but YOU seem to have made a point on SEVERAL occassions in just the last few days with follks who dared deviate from what YOU thought the topic should be.

Seems you have been using that two-faced mirror again.

Not that we would expect any different.

Feed 'em both. Tapes to congresscritters would be a political lobbying
maneuver, the tapes to the FCC for their reasons. Work it from the top
down *and* from the bottom up. Keep in mind that the FCC folk would
much rather not get Congress into their turf, 'snot a comfortable
situation for them so of course they wouldn't be big on us taking our
squawks beyond the FCC.
>

```
>
Yes. Problem being that they don't do it often enough to impress the
horde. They spanked one last week to the tune of $13,500 and yesterday
there were a half dozen of 'em in the 10m cw segement. Getting whacked
by the FCC is statistically a very low risk wherein lies the
ineffectiveness of the rare spankings. Bang ten of 'em a week and
maybe . . .

>them as they still work their illicit activities.

For the most part, freebander activities are of litle
consequence to legitamate hams...as long as that
freebanding stays out of the ham bands. Presumably,
the freebanding is in that "no man's land" of spectrum
that seems to have no stated users at all.

I have posted this before...the best counter to
freebanding is to give the "freeband" back to
hams and then the hams will be proactive
users and monitors of any illegal activity which
can be then passed on (reports, data, audio tapes)
to the FCC for enforcement.

If the freebanders just operate in the freeband space, who
really cares? That's no different than me not worrying
if somebody is speeding on a deserted highway.

Cheers,
Bill K2UNK

Grand conspiracy theory again Dick?

Let me be very specific: IF NCI ever takes
a position to forbid morse use, I will resign
immediately from the NCI BOD and as a member.

>You're the guy who just can't believe
>that the question pool exams can't be passed without learning all the

>exactly that way.

Passing the General theory test in 1957/58 didn't
require much different either. Memorization and
the ability to solve a few basic algebra formulas
(without knowing the theory that established the
formula) was all it took for a teenager.

> You are deliberately turning your back to the realities of the
>situation. That sets prececent for your attitude toward NCI and their
>goals. See no evil, hear no evil, speak no evil.

Yes Dick, that great conspiracy is there. Hey,
we all are part of the one world government movement too,
and then there's the secret society of the bell, and
there's also the (insert name of any paranoid
belief).

Cheers,
Bill K2UNK

As I said, I frankly don't remember the reason but it seemed entirely
inappropriate and trivial at the time, to me. Maybe they were trying to
get FCC's attention. I imagine they suceeded.

Yep, and during that outage, the use of VHF FM
served the day quite well. The outages were very localized
since the typical telco central office in NJ probably covers a
radius of 10-20 miles at most...and often considerable
less. Throughout the outages, there were many
VHF repeaters active and in use for emergency comms.

>Oh, my, bigbadassmarine is all a-twitter over profanity!!!!

Having been in the Armed Forces somehow makes it "OK" to be guttermouthed?

>Nursie has to show actual, real quotes of the above "liberal use of
>profanity." Emphasis on liberal.

Above quote deeply appreciated to make point. Thanks, Lennie.

>[you are unaffected by criticsm but the word is "ineffective," nursie]

Bored again, I see, Lennie. Must be rough, having all those great retirement options, only to spend them parked in front of the CRT looking for opportunities to elevate yourself.

Nice try.

>Nursie consistently writes on amatuer radio. Tsk, tsk, tsk.

Again, I see. No "argument" to the context of the comments. Not that I expect any. You have not been able to defend your positions on other topics, I doubt to see anything meaningful in the future.

>Nursie uses this word a great deal. It is a not-nice word of
>Yiddish equivalent to the colloquial American "dickhead."

Really? I wasn't aware of that particular definition. Interesting how everything in nature finds it's own level, though.

>Test element 1 for a US amateur radio license examination is
>still code testing, still required for a General or Extra class
>license.

Yep, and still the MINIMUM the FCC determined from PUBLIC opinion on what would be appropropriate until the treaty is ammended.

You are STILL trying to act as though this is an issue put thre by the FCC just to taunt you. The FCC has made it clear that it's hands are tied to the treaty. The present code test fulfills both the spirit and the letter of the law.

Phil Kane have very effectively explained to you that a treaty ratified by the United States IS US law.

>Firstly, the "fact" is nothing of the kind. It is just a supposition
>by nursie and one or two others in here

"Supposition" or not, this has been addressed by moe than one FCC official at one time or another and it has been made clear that the FCC is tired of this argument. They WILL eliminate the test after the treaty is allowed.

>Secondly, the FCC has said nothing about "dispensing with a
>code test in the future." The FCC said only that, in 1990 and
>1999, that the code test is not considered of sufficient value
>for the FCC's purpose of licensing amateurs as part of its
>amateur radio regulation task.

You ahve nnot been paying attention to anything except what YOU want to hear. I don't necessarily want code testing to completely go away, but even >>I<< can hear the FCC loud and clear.

What's YOUR problem, Oh Lifeless One?

>Thirdly, the current ITU-R WRC agendas for the whole
>conference in 2003 and the preliminary conference in 2002
>have nothing about S25.5 (commonly and mistakenly
>called "the treaty") alteration, modification, or changing.

Again, Lennie has NOT been paying attention, but that's OK, we accept his oversights.

And there is NOTHING "mistaken" about calling it "the treaty". S25.5 IS part and parcel of overall ITU regulations which ARE themselves part of international treaties to which the United States is signatory.

Perhaps Phil can spend some more time on the intracacies of the United States' legal obligations to you in an 8th-grade level YOU can understand?

>Note: Only S25, the entire body of ITU-R amateur radio
>simplified standards is indicated as being an assignement
>of Study Group 8.

Of which S25.5 is a hotly discussed and important topic to most administrations.

>Nursie should do something about those multiple personalities.

Nothing "multiple" about accepting you as a fool, Lennie.

>Well now, nursie does admit to her obsession. There is always
>optimism for a cure when the patient recognizes her disorder.

Now what can we do to get you to admit yours?

>Actually, not as much as claimed. US radio spectrum allocations
>go from 9 KHz on up to 300 GHz.

And any Amateur allocations still provide me (and most other Radio Amateurs) with somewhere in the "high-90's" of a percent MORE spectrum RIGHT NOW than YOU could use today, Lennie, when one adds up Part 15 and Part 95 subparts that you are "authorized" to use.

>The "basement of RF" is ELF ....

In which we MAY find Lennie at 1750 meters.

>"Daylight" could be roughly 1000 nanometers (actually the IR
>component of daylight) at a frequency of about 300 THz.

On the other end, he may add a modulator to a laser pen for "point-to-point" communications.

>Several have wondered if nursie has seen any daylight.

Just you and Hans...And I still wonder about this since NO ONE has ever seen the two of you in the same room...Hmmmmmm?!?!?!

>There has never been any "refusal to get a license." That is in
>nursie's vivid out-of-body imagination working overtime.

Leonard H. Anderson is again lying.

>My discussion, when not spent 95% refuting nursie's erroneous
>and false charges, is about the elimination of the code test for
>an amateur radio license.

I am not making any "claims". And if it WEREN'T true, why would you have to TRY and refute ANYTHING, Lennie? The archives of USENET would have long ago borne you out.

They haven't.

>Also, nursie's list of radio services useable without an amateur
>radio license is woefully inadequate.

An Amateur Radio license is only good in the Amatuer Radio Service.

>All of broadcasting,
>private land mobile radio, aviation radio service, several fixed
>land radio services do not require a license to operate...just
>for starters.

YOU cannot operate a radio station in ANY service (Parts 15 and 95 notwithstanding) without a STATION license. That station license will specify which discreet channel(s), mode and power levels you may operate that station at. YOUR commercial license says so, right on the back.

UNLESS, od course, you can make a valid argument as to why the FCC is WRONG...?!?!

>My advocacy in here is to eliminate the amateur radio code test. The TEST.

Yep. And the FCC has already made written policy for short term retention of the code TEST, and has stated their intentions, both in formal comments and personal "asides" of Commission officers and members.

It's over with, Lennie. You can pontificate about how you are avenging the weak and downtrodden ALL YOU WANT, but to what avail?

Lennie, PLEASE seek help. Reams of facts and ACTIONS by numerous agencies and organizations prove that you are the proverbial "day late and a dollar short" on almost daily basis, yet you STILL keep trying to ram those windmills.

Help. Lennie...SEEK HELP!

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Commercial gear has been available since at least the
1930s. Since that time (70+ years) it is absolutely
true that a ham might never need to be able to build
anything. The issue isn't the choice to build, Cecil doesn't
oppose that at all. Cecil merely notes that today, for
most hams, building there own is NOT a choice. In
the 50s and 60s, we could "build our own" and save money
because parts were available from junked TVs, old military
surplus, etc. Them days are over.

And any discrete component radio today is pretty
basic when compared to most any commercial rigs.

>> As the level of integration goes up, the necessary
>> knowledge goes down. That's the truism of technical progress.
>
>Nonsense. The stuff builds itself?

The engineers build it...the same as they do for
TVs, VCRs, Stereos, etc. The same advances that
make commercial rigs so much more attractive today
are what killed Eico, Heathkit, Knightkit and others.

Do you know ANYONE that builds there own VCRs,
TVs, Stereos, etc? All were, in the best, routinely
homebrewed (except, of course VCRs).

I am not the most active station on the air, Vince, but I am going to have to ask you to define/prove TWO things:

(1) How is the ARRL responsible for a policy shift the FCC initiated and implemented?

(2) How ahve the bands changed?

Hansel (minu Gretel) slung this crap:

>> Due to lack of hostile targets in peacetime, preparation for war can
>>consist of vectoring allied fighters to shoot down missionary planes, and sinking
>>fishing boats full of schoolchildren.

Yeah...the Joint Chiefs just sit around LOOKING for some innocents to kill for sport, Hans.

>And anyone not prepared to fight for freedon must be prepared to LOSE
>it. I don't know whose that is--it just seemed appropriate.

Forget it, Jerry...Hans spent his first "career" sitting in some radio room in the Navy somewhere and thinks he fought for something.

Now he thinks he can melt away the last few years of his life as some "learned elder statesman" from his keyboard in Minnesota. Fact is that he didn't learn anything...Just marked his time till he could collect his retirement.

The Left Coast Putz and the Great White Yutz. What a pair.

> Are you preaching to U S Navy Master Chief (Ret.) Hans Brakow?

It's Brakob, Phil. And Hans' retired grade do NOT mean that anything he has to say on defense-related topics makes his word sancrosanct, any more than my service in the Marines makes mine immediately beyond reconsideration.

None the less, it would appear that Hans didn't learn anything while accumulating enough frequent flyer miles to acquire that title. Hans was proabaly on the "ROAD" program...(R)etired (O)n (A)ctive (D)uty.

The incidents cited by Hans were tragic and horrific.

Should we STOP trying to intercept drugs or practicing emergency surfacing techniques on submarines because they happened? I don't think so.

Should we learn from them and move forward...?!?! Hmmmmm....?!?!?! Me thinks that a far better way to proceed than to be making the snide, demeaning sleights he has. Not very well thought out and directed at the wrong parties.

The Dope War is the DIRECT cause of the deaths of two innocent people
and the possibly permanent crippling of another.

Net gain -- none.

> Are you
> planning to write that on their grave stones also? Sorry, but those
> two people are not victims of the drug war. They're victims of a

Sorry, this is not correct.

> and a pilot that didn't monitor the proper frequencies.

Actually, he was monitoring the frequencies that he was assigned to
monitor.

> Had either of those two things occurred, those people would be alive today
(drug war or not).

You must be so proud that you can find a way to get off the hook for your money being spent to kill a missionary and her 7-month-old daughter.

However, the fact is that they were breaking no law, they were targetted by a multimillion-dollar AMERICAN "interdiction" jet, which spent an hour leading Peruvian fighters to the missionaries. This is not the first time that this activity has resulted in the shootdown of innocent people, it just happens to be the first time that the victims couldn't be smeared as drug smugglers following the crash.

The official statement from the US State Department, made to justify the killing, is a lie (the claim is made that the plane entered Peruvian airspace from Colombia, when in fact the plane never left Peru at any time during the trip).

I dunno about you, Dwight, but when the government has to lie to get out of trouble, clearly what they were doing is WRONG.

When the Dope War is the excuse for this kind of activity, even if NOBODY had died, don't you see a problem here?

>Sadly they are the latest innocent victims in America's ever growing drug
>war.

They are just the most obvious.

According to the AMA, there may be as many as 75 to 200 drug related deaths of children (defined as under 21 by them) in the United States alone DAILY. This includes deaths from the drug use itself, and violence related to the culture.

That's EVERY DAY. Where is the indignation and the pontificating from Hans and the others over THOSE deaths?

THOSE deaths aren't spectacular and DON'T fit Hans' rant against me, ergo they go unnoticed and without comment. Go figure.

These were horrific deaths. I hope there are some sort of repercussions for the controller who directed the attack and the pilot who pulled the trigger...but this situation should generate new intercept techniques and visual identification of targets.

A fly-by of the Cessna and a demand to land would have certainly been acknowledged and complied with by the missionary pilot. A tragedy would have been averted.

Drug related deaths and tragedies won't end until the apathy about drug use and it's terrible toll on human life and our families ends.

Kids are not excited by radio....PERIOD.

It is old, it has no mystique, it is nothing special. It like getting excited about a telephone., or a cell phone.

The problem is not CW, or a lack of CW. CW is meaningless, except to those who use it.

>Second, the ARRL can't win. If they support all hams passing a 30 WPM code
>test, the coders are happy and everyone else gets pissed. If they support
>no-code, all the old timers that cling to the past get pissed. They can't
>win.

Getting new activity has nothing to do with old-timers or new timers. Radio used to be cutting edge, and now it isn't. People used to like to fuss around with stuff and build stuff, now they don't.

The world changes, and the current trend is away from working for anything..or learning how stuff actually works.

The effect of eliminating code is simply to piss off the people who enjoy CW, and it will certainly NOT rekindle interest is old stale technology like radio.

It isn't old timers against "new age" radio operators. It is people who grew up loving radio and who were thrilled by the concept of talking to people all over the world trying to understand how people view it as something no more magic than a telephone.

Hell, look at CB. It peaked and died way off. The only real activity that is increasing is pirates without tickets of any kind. They are on 160, 80, 30,20,15, and ten meters...and there are more every month. That's where the future of radio is...in not having ANY license. And nothing we can do will change that, all we can do is make it more uncomfortable for people who used to enjoy it.

From Websters: "Outdated - outmoded" I used the word, Vince, so I
get to pick the definition from the list of valid definitions.
If you want to use a different definition, then make your own
statement. My statement stands. You lose.

Unfortunately that's the way most things work. You do what you can to prevent known dangers and work with what results as best you can.

You can be sure that keeping known adult homosexuals from leading Boy Scouts will prevent some cases of abuse, if not all.

Homosexuals have the right to be different. They DON'T have the right to force it on the rest.

Ed likes to ignore facts, like who is it that has stridently demanded
their "right" to the airwaves, whether or not they conformed to the
requirements.

Sure I'll explain it. You say that if they use their callsign you have
no problem with them, them youstudiously ignore the second half of the
issue. What does THAT mean if not that you'd rather ignore them?

Who are those people, Dick, and do you think the FCC can be intimidated
by their demands?

Maybe you'd better dig back into the archives and refresh your fading memory on the subject, OM and find out just who did what to whom. I don't take that sort of treaemant lightly. In case you don't know, one cannot deliberately trash someone else then expect to receive the best sort of treatment in return. Some people don't take well to that sort of abuse-that which was handed out by so many of the codehaters posting here. I'll never again have positive feelings about some of them and I don't see that changing. For sure you ignoring all they did and criticising me for responding won't do it. 'insults and innuendo' is basically fact, whether or not you wish to accept it. Yeah, it sure would have been nice if all this crap had never started. But I didn't start it. I can't end it. But I won't capitulate to it.

So you'd rather ignore that I dropped my membership becasue the ARRL
sued the FCC instead you'd rather focus on the trivial reason why they
did it. I see.

God believing something turns it into reality, Dick. Does your believing
something turn it into reality? If so, please believe that I will win the
Texas Lottery. I have presented evidence that foreign hams don't cause
chaos in their unsegmented ham bands. You, OTOH, have presented your
feelings instead of any evidence. Why do the PACTOR Extras stay out of
the lower 25 KHz of 40m? It is perfectly legal to operate PACTOR there.

"Land Mobile" globally from 6765 to 7000. Not much going on that I can
hear.
>
Only 7000-7100 is exclusively ham radio globally. 7100-7300 is shared
with broadcasting globally. Many couutries don't let hams above 7200.
>
Lotta scuttlebutt floating around on this one. It's based on first
getting an agreement with the broadcasters to stay out of the 40m ham
band at the next ITU gathering. Whch may or may not fly at the outset.
SWL broadcsating is growing, the heat is on.
>
 If such an agreement is reached the scuttlebutt indicates that the
40m band could become either 6.900-7.200 or 6.900-7.100. Seems like
there is some possibility of losing 100kHz of the 40m band in trade
for getting rid of the broasdcasters.
>
Personally I see a lotta potential for being pain in the butt no
matter which way it might go if changes are made, might be better to
leave 40m as is. None of the existing "legal" HF ham xcvrs can
transmit between 6900 and 7000 for instance. Snip, snip . .

Who knows when the aliens are going to land? Your paranoid delusions are getting out of hand, Dick. Do you try to interfere with everyone else's personal business in all walks of life or is it confined to the field of amateur radio?

> But "himself" isn't the only one that is involved.

But he has a right to privacy, Dick. He has a right to make his own mistakes. He doesn't appreciate you sticking your nose into his personal business. Please stop trying to protect him from himself. One man's danger

is another man's thrill.

The discussion was airplanes falling out of the air, not hams falling
out of the air.

Then you must admit that it is also prudent to keep heterosexual males
from young girls based on a considerable body of experience. You wouldn't
be a hypocrite would you? Has anyone kept you away from young girls
lately, Dick?

You can be sure that keeping known adult heterosexual (males) from leading Girl Scouts will prevent some cases of abuse. You can be sure that staying home in bed will prevent auto accidents. Where does it all end?

What we appear to be seeing is the effect of allowing the government to
own public facilities. That is akin to the devine right of kings and
Libertarians are against such.

Don't know the details, Dwight, but I can state the Libertarian position
in general. The individual who owns the property gets to make the rules
concerning the use of the property. "Public facilities" as they exist
today, would be phased out under Libertarianism.

```

There's a Windows based program called "NuMorse" at

http://www.jonal.net/marc/files.htm

It can use either the PC speaker or a soundcard for output. Have not used the program, so can't comment on how good it is, but I know some folks who've used it and liked it.

Let me help you put this Captain's punishment in prospective, Dwight.
When I was in the Army in Bad Kissengen Germany with the 3rd Infantry
Division a Private, the lowest rank in the US Army, refused a Sergeants order
to go into a garbage loader and find some lost military book. Then a officer
ordered him to do the same thing and he refused, demanding protection to help
from being exposed to disease.
For that "criminal act" he received 45 days restriction to barracks,
lost two months pay and was assigned to extra duty for 45 days. Upon
completion of that sentence he was kicked out of the Army, lost his entire
college fund of $30,000 and had to reimburse the Army his enlistment bonus.

And you think this Navy Captain who get a slap on the wrist and will retire
with a nice pension and benefits that negligently killed nine people due
to his dereliction of duty should not be punished?

The pilot said he did file a flight plan and did identify himself
over the radio. There is even a recording of his frantic radio
messages.

That is rude and insulting, Dick. Is this an example of how old timers are all gentlemen, as you implied in an earlier posts.

If the best you can manage is to devolve this into a petty insult, I see little reason to continue. It reminds me of my grammar school days when a kid would be caught being wrong and respond with an insult to try to salvage what little he could from a losing situation. I had expected better of you, Dick. I am disappointed.

But it's probably fair to say that hams did originate most of the ham radio designs in those publications.

Perhaps you are not aware of the number of conversations I have had with Brennan price on the various ways to address the 10-meter intrusion problems. I didn't mention it here because I thought we were all in agreement that 10-meter intrusion is a Bad Thing, so I didn't see a need to state the obvious. Obviously there was a need to state the obvious, so let me do so; 10-meter intrusion by people who are operating outside the scope of Part 97 is a bad thing.

Pardon my sarcasm, but I think in the final analysis, this woman and her

infant daughter will be written off as "collateral damage" by the CIA and
their Peruvian minions. Just like the kids at Waco, Oklahoma City and
Ruby Ridge. In their eyes, Law Enforcement is too important to worry about
civilians who wander into the line of fire.

Yup - back when those frequencies were used by the LAPD.

I remember it well, Dick, and I spoke out against what I felt was
mistreatment back then, too. (Ask Carl.)  And they, like you, presumed that
```

I was speaking out because I disagreed with their views on code testing; I can't count the number of times that Carl Stevenson "knew" that I and ARRL had a "secret agenda" to keep code testing forever. It is unfortunate that things seem to have come full circle. I don't know what it is about being on the "losing" side that seems to bring out the worst in people.

> In case you don't know, one cannot deliberately trash someone else then
expect to
> receive the best sort of treatment in return.

Do you mean like one person telling another to go soak his head? ...

> Some people don't take well to that sort of abuse-that which was handed
out by so
> many of the codehaters posting here.

And who is handing out the abuse now?

> I'll never again have positive feelings about some of them and I
> don't see that changing.

My point exactly, Dick; you are perpetuating a cycle that will leave many newcomers not having positive feelings about you, old timers in general and the message that you think you are offering about the value of Morse code. In case you don't know, one cannot deliberately trash someone else then expect to receive the best sort of treatment in return. What really gets to me is that the conduct you are choosing is really undermining the only way we are going to have left to promote the use of Morse code.

> For sure you ignoring all they did and criticising me for responding won't
do it.

What is with you and this obsession with the word "ignoring," Dick? The reason I am not discussing the reprehensible conduct by some of the NCTA folks several years back is that, well, that was several years back and this is now. If you feel I am "ignoring" things that happened years ago because I don't discuss them now, I will agree with you, as long as we have made it clear what you mean by "ignoring."

>Yeah, it sure would have been nice if all this crap had never started. But
I didn't
> start it. I can't end it. But I won't capitulate to it.

Yes, you can end it, Dick; we are all responsible for our conduct and, if you meant the first half of your post, you know the net effect of the choices you are making right now in "not ending" it. Unfortunately, some of the rest of us have to watch you tear down Morse code and watch you discourage new hams from ever wanting to learn it.

Continue if you must, but don't try to say that someone "made" you do this. You are choosing to do and say everything you do and say and you are completely aware of the consequences and that you are perpetuating the crap.

>None of the existing "legal" HF ham xcvrs can
>transmit between 6900 and 7000 for instance. Snip, snip . .

My Southgate Type 7 transceiver already operates down to 6900 kHz. ;-)
Perfectly legal, too. (the rig, that is. I don't transmit with it below 7000).

Many of the most modern current rigs (Elecraft K2, FT-817, FT-1000MP, etc.) will simply need a firmware upgrade - easy way for the mfrs. to make a few bucks. Classic rigs like the S-line, Drake line and Heath "3395 second IF" rigs will simply need a new heterodyne xtal and a realignment. It's the rigs in the middle (too old to be supported by the mfrs. but new enough to be firmware-controlled) that will suffer the worst.

--

Which is better for ham radio: the 40 meter status quo mess that goes back at least as far as 1938, or accepting a shift to a nonharmonic assignments that eliminates sharing? Or possibly accepting the loss of 100 kHz in return for a worldwide 200 kHz exclusive amateur segment?

Check out the MorseCat program at http://www.qsl.net/dk5ci/ I have it on my Win 98 computer and it
works just fine. You can switch it to use the pc speaker or the sound card and speakers. Best part
is it's FREE not one of those shareware programs.

Don't you know, these guys don't care what happens to amateur radio. They want it to stay exactly the same as it was for the next 20 years, they're too rigid to adapt to any changes. Then in twenty years they'll be dead, and they could care less what happens after that. It's the infantile "I want what I want, and I want it NOW!" syndrome in a 50+ body. Too bad they're too big to spank.

Great post! The few kids that have an interest in radio usually have a parent or other older relative that's a ham. Most of the technogeeks today are interested in computers.

Burt Fisher, who is a bane of this newsgroup because of *how* he says things, has essentially been saying the same thing for years. Ham radio is predominately a hobby for white, overweight, retirees who need something to keep them away from their wives. Younger people who a avid hams are usually social outcasts in their peer group. One only needs to attend a large hamfest to confirm this. Dayton draws quite a few characters. (I usually get a laugh from the ones who plaster antennas all over themselves)

Wayne Green amuses me when he gets on his high horse about ham radio's dwindling ranks. The interest isn't there. Even if it is, kids will grow bored with ham radio when they hear a bunch od old men on the HF frequencies talking about the weather, health problems, or "rig hr is...". As for contests, I'm tired of those after about 15 minutes. The same goes for DX and other "wallpaper" collecting.

...and if you dare to trash morse code testing - in particular, the now-defunct high-speed code testing - you're a liberal, communist, pinko (or to quote Rush Limbo, a "long-haired, dope-smoking, FM type".)

  Can you offer any examples of other nations who have HF licensed
(1.5KW authorized and frequently used on SSB) in the high numbers that
we have?
 I thought not. In fact I was sure of it.

 And there has been no move to eliminate mode segments yet. Stick around
and see what happens when NCI gets that one through.

Ah, so everyone alway says exactly what they mean, and always means
exactly what they say.Especialaly whren there is an Agenda at work.
After 8 years of Bill Clinton, you still subscribe. Right.

If you can read you already know but prefer to avoid it. It can be a bit unpleasant to reach disturbing conclusions from all the small tips and hints that aggregate into a clear 'position'. Such smokescreening is done routinely, in fact little in politics is done otherwise. I suppose ham radio is different, though. Right.

That was the prevailing attitude of most hams-until the illegals DID begin infringing on the ham bands. And now easy ham radio licenses brings them on into ham radio, to use their callsign or not, as whim and who is on the other end of the instant QSO dictates.

>
> I have posted this before...the best counter to

Uh, the 'freeband' never did belong to ham radio, none of it is within international allocations (the freebsand is wherever in the specrum participants want it to be), and even if that could be done, FCC would no more be able to police it than it now is. That's a solution?

> If the freebanders just operate in the freeband space, who
> really cares? That's no different than me not worrying
> if somebody is speeding on a deserted highway.

That's the attitude that has allowed that sctivity to expans so enormously.

Dwight,

Thanks for the clarification. I did not intend for code to be abolished.
Code is just another mode for which there should be no specific testing.
After all, there is no testing for packet.

-jim

Dwight Stewart says:

>It appears you're not the only person who feels he has inalienable
>right to buy alcohol on Sunday?

Why does anyone have a problem with Cecil buy beer on Sunday? What is different about having a tall cool one on Sunday as opposed to any other day of the week?

The police have enough work to keep them busy regulating automobile traffic, preventing robberies and crimes of violence and helping lost children and little old ladies find their way home. As long as the police confine themselves to such activities they are respected friends of the public. But as soon as they begin inquiring into people's private morals or enforcing blue laws, they become nothing more than armed clergymen.

Steve Robeson LPN in a fit of patriotic fervor exclaimed:

>"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Due to lack of hostile targets in peacetime, preparation for war can consist of vectoring allied fighters to shoot down missionary planes, and sinking fishing boats full of schoolchildren.

In a sudden fit of awareness of his surroundings, Dick Carroll blurted out:

> Do you really believe that none of the anticoders would dump code
> from ham radio instantly if they just had the opportunity?

> But the drive to abolish mode allocations in the HF
> bands, should it ever come to fruition, might change
> that opportunity.

Since CW is allowed virtually everywhere (no other mode enjoys that status in the US) and is the second most popular mode of operation on HF, your premise that Morse might be banned not only lacks credibility -- it is outright laughable!

I don't doubt that some whacko might propose such a ban, but only a complete paranoid would take the idea seriously.

That's right.

First the ARRL goes ahead and takes away space because they wanted
incentive licensing. That's OK, we should have some goals for
advancement! Everyone got used to that.

Second, the FCC changes testing. Now the same tests are easier to pass. That's OK, it's the trend of the world. But clearly the Extra class is not really "extra" any longer.

Finally, the FCC takes space and effort away by allowing everone to have what amounts to an automatic upgrade. Holders of ALL classes of tickets with more than a "crude test" of 13 wpm are cheated by allowing people to have the same privledges with less effort.

Of course they did that mostly as a result of Kenwood and the no-work people.

Now the ARRL, in spite of overwhelming response that says keep CW, decides they just won't say anything if someone wants to remove CW requirements.

What a bunch of money grabbing fools. Radio isn't dying because of CW, or testing. Radio is dying because no one has the time or wants to make the effort to learn anything. It is no longer magic to sit in a room and talk to people half-way around the world. There is little time or incentive to build things, and anyone who does like to build things can learn more on internet than they ever can on the ham bands.

Ham radio is dying because the world has changed, not because of CW. It will not live no matter what is done, because people aren't all that interested.

All this no-code stuff does is screw up the time we have left, by moving amateur radio towards CB. Hell, CB even died way off. Why would anyone thing Ham radio should be any better at surviving the changes in society?

  The (in)famous 8 and 12 foot limits come from the BOCA and UBC for
  roof-mounted antennas not requiring a full analysis/building permit.

  BOCA/UBC = "safety" standards, not "zoning" regulations, and
  therefore give the municipalities a lot more wriggle room,
  preemption nothwithstanding.

  The last one that I find in the comm law digest is when the
  FCC proposed giving more of the joint ISM-amateur shared bands to
  the non-licensed Part 15 bunch, and the ARRL filed suit in the DC
  Circuit (U S Court of Appeals for the District of Columbia Circuit)
  for an immediate stay preventing the FCC's decision from going into
  effect (and the wireless industry flooding the market with gadgets),
  pending the results of further interference studies which were
  underway.  Just as happened with the earlier Petition for
  Reconsideration, "The Fix Was In" and the court felt that there was
  no need for an immediate stay.  Score: Goldberg 2, Imlay 0.

And what if quasi-marine style "Rambo" cop decides to confiscate my legal IC706 because he is convinced that I am the "CBer" causing the interference to the complainant? You see, Dwight, I know of cops like that around here. Once they strap on a gun and a badge, they think their sh** don't stink, they are right regardless, and a citizen is always wrong. Have you ever tried to explain something to one of THOSE kinds of cops, Dwight? Have you ever been told, "You better shut up, boy, or you'll go to jail"? Even though you were RIGHT, and KNEW it, and only got out, "But, sir, I.......", you ever been yelled at by a Rambo cop even when you had done nothing wrong? What happens when you pull out a license that is SUPPOSED to end the episode, and, not amenable to having his "authority" challenged, he ignores your attempts to explain?

I had one incident where I was able to humiliate an NC Highway Patrolman and was damn glad to do it. I, as a member of CAP, was called to respond to the crash of a light Cessna many years ago. Appointed as temporary Incident Commander by the state authorities, I arrived with two primary duties. One was to secure the area from spectators for the NTSB, the other was to silence the ELT. I arrived just a few minutes after the pilot had been taken away, and drove up to find an NCHP trooper snapping out orders to get spectators to move their cars--which was great. Resplendent in his black and grey uniform, Smokey Bear hat, and the requisite flight sunglasses, he was the epitome of military spit and polish.

I drove up, got out of the car and approached the twisted wreck to locate and silence the ELT. Upon noticing me approaching the craft, he whirled, and yelled, "Just what th' HELL do you think YOU'RE doin'? GET OUT OF THERE---NOW!" I stopped and waited as he marched quickly over to me. I introduced myself, started to explain why I was there, "I have orders to......." "I DON'T GIVE A DAMN WHO YOU ARE, YOU LEAVE THE AREA RIGHT NOW OR I WILL ARREST YOU"----in spite of the fact that I was in uniform which should have told him I wasn't just a curious bystander. I returned to the vehicle, got on the HF radio and informed the NC Wing Emergency Services Officer that the trooper had ordered me away. Col. Reese told me to stand by just a minute. He phoned the NCHP HQ in Raleigh. As the trooper once again approached, likely to tell me to drive away. his outside speaker blared, "F741, this is Salisbury." He went to answer. Not knowing what the message was, the speaker once again blared out loudly, "F741, you have a uniformed Civil Air Patrol officer on scene, right?" (answer not known) "TROOPER xxxxxxx, YOU WILL COOPERATE WITH ANY AND ALL CAP MEMBERS ON SCENE AND FOLLOW ANY REASONABLE REQUESTS THEY MIGHT HAVE, IS THAT UNDERSTOOD?!" All this before the civilians he was threatening a few moments before! A much chastened and angry trooper emerged from his car--to the giggles and smirks of those who had witnessed his overbearing and unprofessional conduct towards me. He stared daggers at me during the whole time he was on scene, but never gave me further grief. I just smirked at him every chance I got.

THAT is the kind of officer I am talking about: the one who THINKS he knows it all and the kind that some hapless ham is going to run into someday IF local LEOS do, in fact, enforce regulations. That is what I have always objected to about the local enforcement thing. Most cops are decent, hard working, down to earth people. But there are those who think they can do no wrong.

And *IF* it should happen to me, there will be a lawsuit--guaranteed--if it costs me thousands!

Pleasant Hills, PA, 14 April 2001 -- The FCC Enforcement Bureau's Special Counsel for Amateur Radio, Riley Hollingsworth K4ZDH, spoke for over 45 minutes to a crowd of over 50 Amateur Radio operators at the Blue Flame restaurant on Route 51 this morning. It was one of two talks he was scheduled to give today in the Pittsburgh area, the second being that evening in Monroeville at the Palace Inn hotel.

Hollingsworth covered a wide variety of topics involving the FCC and the Amateur Radio Service, covering enforcement issues, possible International regulatory changes, and some of his views for the future of the Amateur service.

He emphasized several times the importance of "how we sound on the air" both domestically and internationally, and how critical that was at upcoming ITU conferences with other countries - conferences where the rule was, large or small, that "one county(has) one vote -- just like we do." He warned the crowd that there was a good chance that the 40 Meter Amateur band would be reduced by 1/3 (from 300 to 200 kHz wide) at the next World Administrative Radio Conference, and that it was very important that we conduct ourselves well on the air. "Operate as if the whole world is listening!"

On cases of interference and other enforcement issues, Hollingsworth emphasized the need for vigilance against the "proliferation of all that junk out there," citing some specific cases.

He urged amateurs to "hear it, document it, and notify the FCC," and that while it may take 3 to 5 years to get back up to full enforcement levels of years past, enforcement IS back but we should not become complacent about it. He also reminded the audience that enforcement alone won't save Amateur Radio, as "there is no rule against being stupid" on the air.

Hollingsworth compared the existing Amateur Radio spectrum to New York's Central Park, reminding the audience that it was "worth billions" and would become a target if the Amateur service did not manage itself properly. He pointed out that the new demands for spectrum today compared to as little as 15 years ago, and emphasized the need for the Amateur Radio community to have a strong National voice and presence - and that the American Radio Relay League is all we have.

Hollingsworth also discussed briefly the growing problem of restrictive zoning, deeds and covenants, mentioning some of the "horror stories" that the FCC had heard about CC&R's only disclosed at the closing or settlement, when it was too late for the home buyer to do anything about it. And he brought up some recent legislation in Texas that would have essentially prohibited all towers (including Amateur) over 25 feet high throughout the state, that the ARRL was able to resolve in our favor. He emphasized that the FCC would only take action to strengthen PRB-1 over deed restrictions if the Amateur community continued to provide the FCC with factual information and insist that action be taken.

Hollingsworth also had praise for the Amateur community in their efforts to innovate new communications techniques, specifically mentioning the new digital PSK-31 mode as something "amazing" and a "big draw for people." He urged the audience to "spark your own enthusiasm" on this and other new communication modes.

"Amateur Radio is at a crossroads right now," and Hollingsworth added that with the convergence of computer and radio technology, we have "the greatest potential" to grow in the last 20 to 25 years.

He pointed out that while it was important to try and draw younger people into the Service, we should remember that Amateur Radio appeals to all age groups. He also urged the Amateur community to continue to train and educate incoming amateurs, stating that "we
have a duty to teach new operators everything we know."
But he also urged us to "stay away from the negative operators" and to not "give them a safe harbor "as the survival of Amateur Radio was at stake. "Negative operators need to learn that Amateur Radio is not the training ground for "the next Jerry Springer," and that with the technology now available to the FCC monitoring stations (despite the closing of many local field offices) that they "can and will be caught, sooner or later."

He also urged Amateurs to get more publicity out about themselves and what they do, stating that "we're not equipped to give ourselves credit." He cited the publicity following recent pirate attacks on shipping in the Caribbean as an example of what we should be doing, and singling out ABC's "20/20" program for getting the story
right - "the best publicity we've had in 20 years." But the lack of publicity of the importance of Amateur Radio to the Hurricane Watch and other events of that scope is something we need to do more about.

On the matter of the Amateur Service restructuring, Hollingsworth emphasized that it was "done" and that we would look back on this at the end of the decade as a "stroke of brilliance." He also pointed out that a side effect has been an upswing in the use by Amateurs of Morse Code communication. More Amateurs are turning or returning to the mode since higher speeds are no longer mandated, citing the analogy "the best way to kill a good book is to put it on the required reading list." He felt that this showed that it wasn't the code speed that was important, but the code itself.

Hollingsworth also touched briefly on the positive relationship that the ARRL President is developing with the FCC commissioners, and that the ARRL and that the ARRL will be giving a presentation and demonstration to the FCC Commissioners once all of the new members have been seated. He brought up that FCC Chairman Powell is very enthusiastic and thinks very positively of the Amateur service. But he also brought up that without Senator Barry Goldwater or FCC Commissioner Lee in Washington any more, we have "no built in safety mechanism" or "insurance policy" and that it is up to us. He also discussed the ARRL's upcoming Big Project to try and put an Amateur station in every elementary school in the country, and the great potential that AMSAT-OSCAR 40 will present to us, even with all of it's problems.

He concluded by reminding everyone present that we need to realize "what a great gift (Amateur Radio) is," but that like any great gifts, it comes with great responsibilities too.

Yeah, I know--let's just grow our hair long, move to Haiut (sic) Asbury,
play guitars, have love-ins. Let's just get rid of all our defensive
weapons and EVERYBODY in the world will join us in peace. Typical
drippy-hippy, leftist tripe. It is that very preparation for war that
prevents it. And no one goes out and practices on innocent civilians.
At least not the Western nations.

And anyone not prepared to fight for freedon must be prepared to LOSE
it. I don't know whose that is--it just seemed appropriate.

Yup,

Dick and I exchanged a couple emails about this very thing. The trouble is that when you mix in a group of "dominant" personalities, this case gay scoutmasters or older scouts who are gay, the young ones are vulnerable due tho the fact that at the ages of 11-13, they are awakening to a whole new set of changes in their bodies and minds. They are curious, eager for information, and even confused about the things that are happening to them. So if a "gay" person (still like the original terms like queer, fag, fairy, etc, because they fit better) kinda brings up the subject of sex to the younger ones, it is possible to lead them into something they are not equipped to deal with--which is why there are age of consent laws. The older Scouts are more settled and not as impressionable--and they are bigger so they can whup hell outta someone that tries that! LOL!

It has always made me wonder why the queers are so all-fired bent on getting into Scouts by and while rubbing their lifestyle in our faces. They already CAN participate in Scouts! All they gotta do is join, do the activities, keep quiet about their sexual prefs., and keep their

hands to themselves. But can they DO that? I would rather deny the
privilege to one group in order to protect our most precious resource:
our kids. Better safe than sorry sounds about right.

Jerry Oxendine says:

> And no one goes out and practices on innocent civilians.
> At least not the Western nations.

Over the weekend, US and Peruvian warplanes cooperated in shooting
down an unarmed missionary flight, killing Veronica Bowers, KD4CKM
and her infant daughter, while practicing interception techniques.

A few weeks ago a US warship sank a Japanese fishing boat, killing
9, including schoolchildren, while practicing surfacing their boat.

Last I checked, both the US and Peru were "Western nations".

Good luck on this one now.

Ed, look at the bright point. Thank heavens for the internet. Look at some of the posts. We could be listening to some of these threads on 75 or 20 meters. For what it is worth, do you think that there should be a sanity test for the amateur license? Hey, it's beautiful here in Rochester, NY, for once. Over 80 degrees. I'm gonna start the grill.

73 from Rochester, NY

Except for very limited application (e.g. power amps), what
is any other use of tubes in amateur radio today?
There is not a single tube regularly in use in any ham or consumer
electronics I have in my home.  I have two antique ham
recievers that have tubes...but they are not in any
daily use at all.  The reality is that my ancient S-20R
reciever is just used for AM broadcast when I am in
my garage.

>There are millions of electron tubes in existance, and many
>hams still use tube type gear, some of which is hybridized such that the
>drive and final amplifier stages are tube type.

IF any ham wants to use tube equipment, that's fine, but
that doesn't make it a required subject area for all hams.
Power amps maybe, but that'd be a strech too as many
of the under 300 watt units are also solid state today.
```

>Othere still use gear
>based on vacuum tubes, and many still build simple tube type ham gear
>for use on the ham bands.

Godd for them. That is "live in the past" technology.
Why anyone builds tube equipment today that can
just as easily be done with solid state defies logic.

>All news to you, isnt' it?

Not at all. I just disagree with the need for ALL hams
to be tested on archaic technology. The fact that it is
used by some hams doesn't change the fact that it
is obsolete (stand by for Vinnie B diatribe :-)

> The point is clear: Just because more efficient technologies have taken
>over the mainstream of communications in no invalidates the usefulness
>of the eariler technilogies still in existance. When they become as hard
>to find as a wireline telegraph installation, then it might be time to
>write them off completely.

No one is asking you or anyone else to write-off
the technology IF you like it. The issue is valid
licensing requirements. Just how much tube
technology do you think technician and/or EE
students get these days?

Cheers,

Additionally, very few hams actually DESIGNED and
built their own station equipment. Most of us that
did any homebrew usually followed a construction
article from the pages of the ARRL handbook,
QST, CQ magazine, Pop. Electronics and/or others.
It was much more of a "kit" project except instead
of Heathkit gathering all the components and providing
all the predrilled/punched/labeled hardware we did it
ourselves.

Yep, and or followed "construction articles" per my comment
above.

Don't try spending it though.

The fact remains that only some people have raised that
argument and I am not oe of them. The code test should
end simly because it isn't needed. Any talk of increasing
hams should be a different discussion.

Cheers,
Bill K2UNK

I had over 100 tubes, many brand new. I donated
them all to a fellow employee that is heavy into
antique radios. He was very pleased.

>What hams need is some of the expertise to
>use thosetubes and also some transistors to build a working radio set.

Why? There are excellent chip sets that do it all
these days.

>Transmitter and receiver. I was looking at a 50's CQ magazine articlethe

>meter CW. It had a VFO builtin and a Superheterodye receiver. It used
>four vacuum tubes. I was impressed.
>You couldn't do that with four transistors.

One reason that 4 tubes cut it was because the later tubes
were often two or even three tubes in one tube envelope.
Could you replace one dual triode with one transistor...
not at all, but you can often replace multiple tubes/transistors with
one IC chip.

Cheers,
Bill K2UNK

Without passing judgement on the 8' limit,
the fact remains that you can engage in
very credible communications with antennae
that fits in that 8' limit. I have worked Europe, Hawaii
and others with just a 10m dipole INSIDE my attic.

>be a gun expert to pick up stray bullets or shell casings off the
>ground for evidence.

True, but then you had better have a ballistics
expert testify as to the meaning of what was found.

>Or a gun expert to recognize a sawed off shotgun.

An obvious situation for anyone. Bad example.

>Or a medical expert to recognize an injury has occurred. Or
>a alcohol expert to recognize the intoxicated.

Actually, the police are quizzed extensively on DWI
testing and lose caes where proper procedures are

not followed.

>Or a drug expert to
>recognize illegal drugs.

If I hand pills to a cop, how does s/he tell if they are
legal medications (prescription or over the counter)
or if they are illicit drugs. It takes an expert analysis
to testify as to what something (drugs) actually is.

>Or an electronics expert to recognize what a
>television is before deciding it is stolen.

Actually, unless it can be identified by some particular
aspect, such proof is not as easy as it might appear.

>And the same with almost
>everything else the cop does.

Dream on.

> In whatever situation, all the cop has to have is enough knowledge
>to do his job, which is to gather evidence properly or perform
>whatever test is available properly.

If you don't think cops need to be qualified/certified
on certain technologies, you have much to learn.
Here in NJ, a cop needs to be trained and "certified"
to use and be able to testify as to the readings
obtained with a noise meter in cases involving nuisance
complaints due to noise.

> If expert testimony is needed,
>again that usually comes from outside law enforcement circles.

If the "measurment process is flawed" that taints
the evidence.

> And there is no reason to believe that it will be any different when
>it comes to enforcing CB regulations. The only skills a cop will need
>is the ability to recognize an illegal device and gather it for
>evidence.

PLEASE tell us how a cop can do that at all? There are
thousands of legal CB radios that can modified without
much difficulty and which, when modified,
show no external signs of being modified.

>And, as I've already said in another message, it does not
>take great skill or knowledge to do that. If expert evidence is
>needed, that can be obtained by having the device tested by an expert
>after it is collected from the scene. And, in most cases, that expert
>will not even have to show up in court - his report will stand unless challenged.

No attorney of any credibility will allow an expert witness
report stand on stipulation.

Cheers,
Bill K2UNK

How could we even "dump" code at all? Do you
believe that code, as a mode, would ever be "outlawed"
at the international level? much less by the FCC?

>So it makes much more sense to just be congenial and say "We really
>don't care if you use it.." knowing full well there's nothing they can
>do about it - now. But the drive to abolish mode allocations in the HF

>international allocations (the freebsand is wherever in the specrum
>participants want it to be), and even if that could be done, FCC would
>no more be able to police it than it now is. That's a solution?

It could be. The FCC could consider making that "freeband"
spectrum a US ham band allowing limited power to avoid
interference to other services which are in other countries.

The question is: Just what and where is any legal use being
made of that "freeband" spectrum?

>> If the freebanders just operate in the freeband space, who
>> really cares? That's no different than me not worrying
>> if somebody is speeding on a deserted highway.
>
>That's the attitude that has allowed that sctivity to expans so
>enormously.

But the enforcement has NEVER been something expected
of nor committed to by hams at all.

Cheers,
Bill K2UNK

BULLSHIT!   What technology?   More details please.

The commission is running a bargain basement interferometer system that they built in house, after stealing the plans from a commercial outfit in California.   It has never worked worth a shit and is down more than it is up. They've never solved the problem of lightning strikes. When it's up, the accuracy stinks.   Their stupidity was in not contracting out to have a superior system built. The piece of shit system they built is a standard joke within private industry circles. The software they're using was stolen from the U.S. Navy and was never intended to be used with the hardware they stole.   The commission has never solved the software-hardware mismatch and never will.   At an industry trade show, I once heard the FCC system referred to as a "Chinese mattress spring, held together with bubble gum and bailing wire."

Somebody was duped and wrote the following fairy tale:

and that with the technology now available to the FCC monitoring stations (despite the closing of many local field offices) that they "can and will be caught, sooner or later."

I can tell you why I don't believe Bill Clinton any longer; he lied and got
caught at it several times.

It seems that your only reason for assuming that people are lying is that
sometimes some people lie. I need more to call a person a liar, Dick, and I
need more to be persuaded that someone is lying. "Might be so is" might be
a good enough standard for you, but it is not good enough for me.

But thanks for the explanation of how you came to your conclusions. It does
put things into a better perspective.

I have read the same words you have read and do not believe there is a
secret agenda to ban Morse code use from the ham bands.

> It can be a bit unpleasant to reach disturbing conclusions from all the
small tips
> and hints that aggregate into a clear 'position'.

I agree, reaching "conclusions" from non-existant "small tips and hints" is
unpleasant, indeed. If you believe it to be unpleasant, why do you do it?

> Such smokescreening is done routinely, in fact little in politics is done
otherwise.

Most of the smokescreening I have seen in politics involves trying to
persuade people that there is some secret and nefarious agenda in place by
the opposing party.  It is usually done with inuendo, rather than concrete
examples.

Can you offer more than a vague generalization that there are small tips and
hints that "prove" that Bill is lying when he tells us that NCI does not
have a secret agenda to eliminate Morse code use on the ham bands?

There are none that meet those criteria.

Now, I answered your question; will you answer mine?

 Apparently one of the murdered missionaries in Peru was a ham.
Sadly they are the latest innocent victims in America's ever growing drug
war.

Well I would like to see you talk uhf/vhf with a 8' height restriction, can you do it yes barely, and only if you are into repeaters. Is it reasonable No Not at all.. I cannot even put up a R-7 in my backyard the size of the lot is 150' x 225' plenty of room . There is a Home depot within 200' of my front door the roof top is higher than my antennas are allowed, the local post office which is directly across the street, the flag pole is higher than any antenna I can have. A ham in our town got a variance for a 35' tower 2 months before I applied for my permit. The top of my house is 22' to the peak, so any other ham/ non-ham with a roof top of 35' in my town will at least have better coverage then me. Why should I have to use dipoles, and inferior compromise antennas Where is the reasonable accommodation. I have had legal counsel the ARRL's said they couldn't do anything, I have went to Superior Court to fight the planning boards desicion the judges discussion was for me to re- apply and the town was to consider Prb-1, which they knew about all along and did consider in the first place. But they felt the towns concerns out-weighed Prb-1. My antenna was labeled an attractive nuisance, an eyesore, among other things. I had spoken to Chris Imlay when this happened and he was going to try and help, but of course he did not. I just hope other hams don't run into this problem because when someone like me gets turned down they now have shot down the rest of us.

Bill, So am I stuck on 10 meters then?
Don't think I can fit a 80 meter dipole in my attic, nor 40 nor 20 I would like a beam antenna is that reasonable, perhaps I want a vertical antenna I cannot have one I don't live in a town house, or condo I live on a residential/commercial street in a rural type area, The light posts at the Post office across the street from my house are Higher than any antenna I can Have. You try to live in a town like this. Any Offers of help are appreciated.

Why you don't just put a small ball and pulley on the top of the antenna and call it a flagpole. What's their requirements for flagpoles?

I deal with over 400 police depts in NJ. I fix the traffic radar they use, the video cameras and the mobile data terminals(computers)most have no clue about electronics, nor the desire to learn about it They have a hard time figuring which brand radar they use what Band it transmits on etc, How in the world are they going to know about CB radios unless they take a training course and are well versed in CB's I just don't see that happening at this time there are many mor problems to solve ...

This is pretty much what hams are doing to day, too, only I believe that there are more of them now than then. I think the little Tuna Tin 2 kit sold over 800. I doubt that more than 800 people duplicated any particular project from the 50s and 60s.

Actually, you come across as the fascist - trying to force people to learn something for their own good. The need for a ham to be able to build anything comes from that ham as an act of freedom of choice. I know that you do NOT believe in freedom of choice, Dick, but freedom of choice is imminently appropriate in a hobby in a free society.

Building electronic equipment is NOT a requirement for hams. Some choose to build and some choose not to build. That is exactly as it should be. We don't need fascism in this country.

It is a big if to assume that NCI will someday set a policy that it wants to eliminate mode segments. With that big if in mind, do you think that they should have the right to ask the FCC for that rules change, or that they should be stopped somehow?

What end result do you envision to this thread?

You have just reached a new and very deep, like outta sight, LOW.
To opportunistically use this tragic, preventable incident to further
your private jihad against all code testing is reprehensible beyond all
rationalization.

Here's what the discussion was about, Dick.
Have you ever asked yourself: What is the most important function that
hams perform? What knowledge/skill does a ham need to perform that
function? Should arbitrary knowledge/skill requirements keep people
capable of performing that most important function out of the ARS?

Larry,

To use the story of two tragic deaths in order to further editorialize on your pet anti-morse testing peeve makes you look like an unfeeling jerk. The woman's death had nothing to do with amateur radio or with her lack of HF access.

But taking an exam *IS* a requirement for hams so there's no analogy. But
it is true that someone who is not going to operate need not take an exam.

Lots of STUFF to do at www.ab7sl.com such as...

All - NEW - W9INN antenna page!!

1. Ham Radio Links (some unusual)
2. Several Ham Radio Web Rings !
3.AB7SL Biography
4.Personal Photos
5.Station Description
6.Software Downloads
7.The DX Page (w / Telnet links)
8.Downloadable IOTA List
9.W7NH - Elmer Tribute
8.Prescott Arizona Page
9.Online DX Logbook
10.3D Art Gallery (downloads)
11.Music Page (downloads)
12.Frequently Asked Questions
13.Free-For-All Links Page
14.Guestbook
15.Equipment Photos
16.Downloadable DXCC Countries List
17.Downloadable ITU Prefixes List

18.W9INN Antennas Page

I have made it clear, Dick, but you must have missed it. I would require
knowledge of rules, regulations, operating procedures, and safety. Anything
else can be learned as needed.

Libertarians are the the most skillful people that I know of at
recognizing real evil, Dick. Evil does not lurk behind every bush.

I don't work on stuff that I know nothing about, Dick, do you?
If someone is foolish enough to work on a 1,500 watt transmitter without
knowing what he's doing, he deserves to be on the list for the Darwin awards.
And I don't recall any Q&As on any of the exams that would qualify someone to
work on a 1,500 watt transmitter.

Is there a governmental requirement to pass a test on poisonous snakes
before anyone is allowed to pick one up? Get real, Dick. Only a fool
would think there is a way to protect a fool from himself.

I used to jump off two-story houses for fun. But what does falling have
to do with ham radio? Maybe you need a T-shirt that says:

"I'VE FALLEN AND CAN'T REACH MY VIBROPLEX"

> Are you really that far out of touch?

Your statement says exactly the same thing, Dick. If you are going to condemn all homosexual males for the actions of a few, then to be consistent, you must condemn all males for the actions of a few or all blacks for the actions of the few or all whites for the actions of a few or all Jews for the actions of a few or all Germans for the actions of a few. It is a never-ending slippery slope.

> The Boy Scouts should not allow homosexuals to be scout leaders for

> That alone is sufficient reason to eliminate homosexuals as scout
> leaders or officials in any capacity.

Then using exactly the same logic, heterosexual males should not be involved in the Girl Scouts where all those juvenile females are concentrated. After all, there are twice as many pedophiles among heterosexual males as there are among homosexual males.

But you missed my Libertarian point. If the Boy Scouts do not accept any public funding then they should have a right to bar anyone for any reason.

Hi,
I am looking for a morse code practice program for Windows 98.
It can not be a DOS program because my sound card will not work
with it and my computer has no PC speaker. I have hunted
around and only find DOS type programs or programs that require
a PC speaker.

Anyone have any ideas?

Thanks,

Your terminology is suspect as usual. "Most important" may not be congruent with all the elements of satisfied by the 'basis and purpose". If there was no reason for ham radio other than for emergency communications and the only requirement for those operators was merely

PTT or keyboard operating skill, then there would be no valid for the existance of an amateur radio service. You can't separate that single operator function from the other parts. An operator may need technical skills as well as just the ability to talk into a microphine. He might have to install a station and build and erect an antenna, solder PL259's to coax, install open wire line, build a twin lead Jpole for 2meters etc. in an emergency situation. Your point is way too dull to be effective.

Only in YOUR mind. Do you believe all the SSB yakkers would refrain from using the lower ends of the bands without the mode segmenting? I certainly don't.

The difference is that you and I have knowledge enough to learn what we
are about to get into. Licensees whose entire body of technical
knowledge consists of an afternoon with Gordon West do not.

> If someone is foolish enough to work on a 1,500 watt transmitter without

And it's not just the new licensee that is involved. Who knows who he
may inadvertantly and unknowingly expose to hazards?

>
> Is there a governmental requirement to pass a test on poisonous snakes

 But "himself" isn't the only one that is involved.
 Hey Cecil, pick up that pretty black, yellow, and red rope lying there
will you?

Besides there are no frequency restrictions on hams in South America.
If you have a license you get to operate.

So what do you think of LA's recent decision to limit the boy scout's use of public facilities in that city, Cecil? A large number of groups, like the boy scouts, use those facilities each year and I'm sure the city has not checked membership rules of those other groups. In other words, the boy scouts were singled out solely because gay groups decided to target that specific organization. Of course, this leaves the boy scouts in a no-win situation - the best way to fight this rule is to find other organizations with similar rules (showing the rule was unfairly applied to them alone), however to do so would mean those other organizations might face the same harassment the scouts are now facing (something that nobody would wish on their worst enemy). I'm ashamed the city of Los Angeles, one of the largest cities in this country, would choose gay groups over the BSA (and I'm sure those gay groups still get to use the public facilities in LA).

Anyone can have a beer anytime they want, Hans. However, since the state is responsible for licensing alcohol sales, they have the right to set rules concerning those sales. And, in some parts of this country, the residents of those states feel a law restricting sales on Sunday is exactly what they want. By the way, the primary reason for these laws is to shut down bars, and strip clubs, so people don't have to deal with that nonsense on their way to and from church on Sunday (or, for those not so religious, while out on family recreational activities).

> [snip] But as soon as they begin
> inquiring into people's private morals
> or enforcing blue laws, they become
> nothing more than armed clergymen.

The police don't enforce the blue laws, Hans. That is the responsibility of the businesses with alcohol licenses (in the story I gave, the police were enforcing the shoplifting law, not the blue law). And, again, nobody is "inquiring into people's private morals." You're free to get as drunk as your morals desire - even on Sunday, Hans.

I know you don't like not having the ability to buy alcohol on Sunday, but you're not the sole resident of this country (and neither is Cecil). When the state makes laws, they have to find a balance between what you want and what others want. And I'm sure lawmakers felt that allowing you to buy alcohol six days a week, and banning sales one day a week, was a more than generous balance between the desires of those who want to get drunk and those who want no sales at all.

13.10.010 Shortwave radio receiver defined.

As used in this chapter, "shortwave radio receiver" means and includes any radio receiver or other device capable of receiving messages or communications transmitted on any radio transmission station operating on a frequency between 1600 kilocycles and 2500 kilocycles, or on a frequency between 30 megacycles and 40 megacycles, or between 150 megacycles and 160 megacycles. (Ord. 5462 � 1, 1950: Ord. 4322 � 1, 1944.)

13.10.020 Installing or using shortwave radios in vehicles prohibited without permit.

Except as provided in Section 13.20.050 of this chapter, every person who, without obtaining a permit from the sheriff or from the forester and fire warden authorizing him to do so, equips any vehicle with, or operates any vehicle equipped with, a shortwave radio receiver, is guilty of an infraction. (Ord. 83-0066 � 90, 1983: Ord. 5462 � 2, 1950: Ord. 4322 � 2, 1944.)

13.10.050 Exemptions from permit requirements.

The provisions of Section 13.10.020 of this chapter do not apply to:

A. A vehicle owned or operated by the United States, the state of California, any county, city and county, or municipality of this state, or any subdivision, agency or instrumentality of the foregoing if the department head or other governmental officer in responsible control over the operation of such vehicle has expressly ordered, authorized or approved the use of a shortwave radio receiver therein;

B. Any vehicle owned or operated by a person or association of persons licensed by the Federal Communications Commission to operate a fixed or mobile shortwave transmission station, one of the authorized purposes of which is to communicate by radio with such vehicle or with other vehicles owned or operated by such person or association. The owner of such vehicle coming within the foregoing exemption shall inform the sheriff of such use and give him the license number of the vehicle. Failure to do so is a misdemeanor;

C. Mobile telephone equipment for use in conjunction with communication service furnished by public utilities under the jurisdiction of the Public Utilities Commission of the state of California or the Federal Communications Commission. (Ord. 4861 � 1, 1947; Ord. 4322 � 4, 1942.)

13.10.070 Violation -- Penalty.

Violation of this chapter is an infraction punishable by:

A. A fine not exceeding $50.00 for a first violation;

B. A fine not exceeding $100.00 for a second violation within one year;

C. A fine not exceeding $250.00 for each additional violation within one year. (Ord. 12264 � 1, 1980: Ord. 4322 � 7, 1942.)

13.10.080 Severability.

If any provisions of the ordinance codified in this chapter, or the application thereof to any person or circumstance is held invalid, the remainder of such ordinance, and the application of such provision to other persons or circumstances, shall not be affected thereby. (Ord. 4322 � 6, 1942.)

Yes, I've met arrogant cops before, Jerry. But I've never met one
who would openly, and willfully, violate the law over something
anywhere near as simple as a CB radio complaint would be (and that
includes the cop in your little story). Therefore, to suggest this is
something that the average person should be gravely concerned about
when it comes to HR-2346 is absolutely absurd. In other words, lets
try to keep this discussion within the realm of reality.

No kidding, Bill. That's what I've been saying all along. A cop doesn't have to be an expert to do his job - experts are brought in later, if needed, to testify about any evidence gathered. All the cop has to have is enough knowledge to recognize a probable violation, gather information, and gather evidence. Again, when it comes to HR-2346, any testimony of an electronics nature would involve an expert called during any legal hearing into the matter.

> > In whatever situation, all the cop has to have

Are we talking in circles here, Bill? I just got through saying that a cop has to have enough knowledge to do his job (gather evidence and perform whatever test), and then you come back with a rant about me not thinking a cop needs to be qualified. I'll repeat it again (using your word this time so you'll understand what I'm saying) - yes, a cop has to be "qualified" to do his job. But that does not suggest for a moment that the cop has to be an electronics expert to do his job, or any other kind of an expert to do his job. If expert testimony is required to give details about that illegal radio (or whatever), that expert can be called later in the courtroom.

> PLEASE tell us how a cop can do that at all?

Oh, good grief! I just answered that a few messages ago in this

very thread, Bill. So that I don't have to keep repeating myself for
every single person who joins this thread, please go back and read my
previous answer.

Reports from experts are entered into evidence every day in
courtrooms across America, Bill. And, in the great majority of those
cases, the report is never challenged. In fact, about the only time
it would be challenged is if the lawyer, or his expert, found a
weakness in the report. Otherwise, most opposing lawyers would rather
not draw too much attention to a report that adds evidence against his client.

Actually, Sam (and here is your answer also, Bill), since legal CB equipment has a type-acceptance sticker on it, and illegal equipment does not, here is one extremely simple method that could be used to determine if the device is illegal for the unlicensed operator. And I can think of several additional methods that would be just about as simple.

They were not "practicing interception techniques." They were engaging what they thought was a aircraft transporting drugs, with no flight plan filed and no response to radio challenges.

> A few weeks ago a US warship sank a Japanese
> fishing boat, killing 9, including
> schoolchildren, while practicing surfacing
> their boat.

They were not "practicing surfacing their boat." They were giving a demonstration of that submarine's ability to surface quickly - a demonstration the Captain was ordered to do by fleet headquarters when conducting tours for visitors (more in another thread).

Gee, the deaths of those two people certainly provides another opportunity to trash the drug laws again, doesn't it, Keith? Are you planning to write that on their grave stones also? Sorry, but those two people are not victims of the drug war. They're victims of a flight plan that didn't get listed properly, and a pilot that didn't monitor the proper frequencies. Had either of those two things occurred, those people would be alive today (drug war or not).

Oh, come on, guys (Ed, Richard, Larry, Cecil, and Dick). Read the darn subject line. When Jim said to that "we need to eliminate code entirely," he was obviously addressing the subject (code testing). He even mentioned "classifications based upon code speed," which is a testing issue having little to do with people using code on the radio. And he is right - when it comes to code testing, code probably should be a thing of the past.

It may or may not be prudent but I question whether it is possible.
Depending on safety devices that don't work is at best futile and at worst
fatal.

Don't overthink the problem Dwight. The biggest reason bars close on
Sunday is that the bar owners want to.

Douglas County in NE is 'dry' which in NE means beer and package. Omaha
which covers most of it is quite wet but doesn't open until noon on
Sunday. You have never seen so much beer sold in a six hour period from
6AM to noon anywhere outside the Quebec ballparks where they don't sell in
the stands..

I still can't believe people who keep wanting to hold the code so near and dear. If you want to use this form of communication, great. It is outdated. Keeping it does not attract new hams. Kids with computers are just not excited by the prospect of morse code. People have to get used to change and quit clinging on to the past.

Second, the ARRL can't win. If they support all hams passing a 30 WPM code test, the coders are happy and everyone else gets pissed. If they support no-code, all the old timers that cling to the past get pissed. They can't win.

If little boys are twice as likely to molest little girls, then we keep
little boys away from the Girl Scouts.

If homosexual mean are more likely to molest boys, we keep homosexual men away from Boy Scouts.

So yes, does that answer the question?

Perhaps more hams would be gentle if certain old timers would start setting a good example and acting gentle instead of spouting insults and innuendo. I will believe you are concerned about the gentleness of hams when you feel it applies to your conduct here. I have seen you do many things that I do not consider to be good examples.

Can you explain why you feel that gentle conduct should apply to others and not yourself?

Since I know a good number here have military backgrounds, I'm sure most have followed the events surrounding the submarine accident (involving the Japanese boat several weeks ago). Therefore, I know most will have heard the results of the Captain's Mast today (written reprimand).

I don't think the Captain of that submarine should have received any form of punishment at all. If fleet wanted such a dangerous activity like that done while visitors were aboard, they should at least stand behind the Captain if, and when, an accident occurs. Instead, we have what appears to be yet another military member falling on his sword to cover the shortsightedness of his superiors.

This is especially true when, in my opinion, the Captain didn't really do anything wrong. A big fuss was made about the amount of time he looked through the periscope (about 90 seconds instead of the recommended 180). However, that recommended three minutes is for normal surfacing operations, not the procedure that was being demonstrated - zero seconds are recommended for that procedure (emergency surfacing), so 90 seconds was more than reasonable for a simulation like that.

Furthermore, it really doesn't matter how long he looked through the periscope. Since he had not seen the approaching vessel during the time he was looking (the vessel was not visible in the conditions that existed that day), he would not have saw it approaching no matter how long he had been looking - two minutes or two hours. The accident would still have occurred if that submarine surfaced at that moment.

People have to understand that the military's job is a dangerous one, and occasionally accidents like this are going to happen. There is no way to prevent them. Heck, we have civilian boating accidents all the time, even without the complexities of military missions thrown in. In reality, it is a wonder, and a credit to the military, that we don't have far more accidents. And, like there is often no way to prevent those accidents, there is often no particular person at fault - the accident is simply the result of pushing men and machines to the limits. This incident appears to be one of those accidents where nobody was truly at fault. The procedure that submarine was doing is dramatic and obviously dangerous to nearby vessels. The crew did it's job well (even if not perfectly). The Captain did his job well (even if not perfectly). What more can we expect from human beings?

Anyway, I understand why the Navy decided to punish the Captain, and why the Captain decided to take that punishment without a fight, but I don't think it is right in the end. Doing it for the good of the country, or for the good of the Navy, is not right if an innocent person is punished, or if that hides a real problem (the military's tendency to find a scapegoat whenever something goes wrong, or even when something doesn't go wrong but it looks bad).

> So who says that Bill sets NCI's agenda?

You have, Dick, on numerous occasions. Bill has said that he speaks for NCI when he states that the organization is not opposed to the use of Morse code. The NCI web page states that the organization is not opposed to the use of Morse code. Yet you persist in this "secret agenda" paranoia. NCI has a secret agenda, ARRL has a secret agenda. You probably believe it is coincidence that all of those organizations and individuals whose views differ from your own are hiding some secret.

Yes, I do, Dick. I do a fair amount of travel, mostly on ARRL business, and spend most of my weekends outdoors working on my old pickup truck or my yard.

Why do you ask?

As to my sourpusseshness, I pointed out that it is pretty petty to drop your League membership over something not important enough to remember. I still find that a bit odd.

I wasn't talking about then, Dick; I have no way of knowing how you felt then. Perhaps you chose not to renew your membership without having any bitter feelings at the time.

I just assumed that you were bitter now because you have brought up this undefined and unremembered issue repeatedly on the newsgroup, in a context that led me to believe you were bitter about it. If you assure me that you were not bitter, but disgusted, I will accept you at your word.

Another example of how gentleness has become lost within Amateur Radio, Dick? Good thing you only expect that gentleness be exhibited by others avoiding the use of the CW part of the band with other modes.

Note that I didn't say anything about requiring hams to fulfill any function.
Dick is big on forcing hams to satisfy his idea of what a ham should be.

Not only that, but he falsely implied that I think hams should be required
to fill the most important function. I, not being a fascist, did not say
any such thing.

And I have far more HF transceivers than I could expect to use under
any conceivable circumstances. There's no conceptual difference, Dick.
Both are simply black boxes to which to be interfaced.

> You couldn't do that with four transistors.

Of course, 20 transistors cost less than four tubes. And there probably
exists one IC that will do the job of those 4 tubes.

Somehow, the term "freebander" makes it sound so noble. Substitute "federal felon" for the term "freebander" and see how it reads.

If they use their call signs and talk with others who also have a call sign, it is called Amateur Radio, Dick. I have no problem with that.

I work 40m SSB splits, Dick, with the foreign hams transmitting in
the middle of the CW/data portion of the band. I haven't seen any
wars yet.

The foreign SSB ops in the US CW/data portion of of 40m have
been doing it for many, many years without any detectable chaos.

??? As good as it was built to be, of course.
 Let's see now - you're saying that since no individual can readily
build gear that competes with commercial gear, hams shouldn't need to
build anything. Since they don't need to ever build anything, you agree
with Cecil that there is no reason for hams to know anything about radio
or electronics technology. So we are in the final analysis nothing but a
bunch of CBers in your and NCI's view.

Then you admit that, contrary to your earlier prediction, freebanding is
not associated with restructuring and freebanders were there before
restructuring.

> Why do you almost never hear a CW QSO up in the phone portions, where
> they have always been completely legal?

Your question disproves your argument, Dick. CW is NOT prohibited from
the phone part of the band yet the gentlemen's agreement works there just
fine like it works just fine for foreign ham bands. You shot your own
argument down.

Really!!?? No wonder for most hams building is not a choice! Today they don't learn enough to throw their own HF dipole together! So how the devil would they ever begin go think about building a radio?

Hey Bruce, where are you? You had it right all along,"Without CW it's Just CB"!
These clowns prove it more and more with every post.

It this analogy were true, Cecil, one could argue that the FCC regs do not require a ham to even operate, so under the Cecil principle, no exams would need be given.

I don't think that many are going to buy that one, Cec'.

Bill, is it an NCI policy that hams should not have to know any radio or electronics technology?

Do you think a majority of the present NCI Board of Directors would vote for such a policy?

It's hard to see how any ham could badly injure himself with his IC-706.
It is the responsibility of each individual ham to protect himself from
danger. One shouldn't climb a 100ft tower without a safety harness and I
didn't see a word about that on any of the amateur radio exams I have
ever taken (including the Extra). Please present the Q&A from any of
the exams that will ensure foolproof safety protection for hams.

Ham radio is simply not like falling 10k feet out of the sky. Anyone
who thinks ham radio is anywhere near as dangerous as piloting an
airplane is too far gone to reason with.

I know that. And I know that CW is very much used within the ARS. The same
logic holds. If code should be eliminated then so should horses for the
same reason.

One time there was a 19th century outlaw who killed a guy in Arkansas, stole
his horse, and fled to Texas. He was hanged in Texas for horse theft, not
for murder.

There you go again, creating attitudes that were never there. I was not bitter then. I WAS a bit disgusted with ARRL heirarchy. And it as not the case Phil cited. I remember that one.

Ed, you're turning into a real sourpuss. I mention dropping my League
membership in disgust because ARRL sued the FCC over something so
trivial that several years later I can't recall what the trifling (in my
opinion) matter was about, and suddenly I'm an ogre of some sort. Do you
get out of the house much?

The issue was testing to qualify hams to fulfill the basis and purpose
of ham radio, and Cecil and Ed both know it. They continue to niggle and
nibble at any and all code supporters who stand up for it.

There was a special on Hitler's sex life on the History Channel a few weeks ago. He drove his female cousin crazy with his perversions.

> Generalizations are dangerous. So is ignoring a large body of
> experience which shows trends that are dangerous. Many homosexual men

A minority of men are murderers. Do you ignore them? Do you consider every man a murderer until proven otherwise? There is an extreme danger in collectivism. That has been proven over and over down through history. When are we ever going to learn to protect ourselves and our loved ones in general and judge each individual in particular?

Little girls are twice as likely to be molested by a heterosexual male as little boys are likely to be molested by a homosexual male. Should we not protect our little girls? A strange male is twice as likely to be a molester of little girls as he is to be a molester of little boys.

Condemning all members of any group for the actions of some members of the group is simply an evil thing to do. That is the basis for collectivisms like racism and sexism.

However, private organizations should have the right to admit or reject anyone they choose. If the Boy Scouts don't accept any public money, they have the logical right to reject men with brown eyes if they so choose. I know that's politically incorrect, but that's the way things should be. It broadly comes under the heading of property rights.

Mrs. Roni L. Bower, KD4CKM, and infant daughter, silent key.

From QRZ, written by PATRICK HERMAN
~~~~~~
The Missionary plane shot down over Peru by the Peruvian military, included the loss of a ham. Veronica "RONNIE" Bowers KD4CKN. Ronnie and her husband Jim Bowers KD4CKM were on there way to Iquitos Peru from Benjamin Constant in Brazil.

Muskegon, Mich-native Veronica "Roni" Bowers, 37, and her 7-month-old daughter, Charity, were killed and pilot Kevin Donaldson was wounded when their Cessna was shot down by a drug-sniffing Peruvian aircraft. A U.S. surveillance plane monitored Peru's downing of the plane carrying American missionaries, a U.S. Embassy official said Saturday. Map courtesy www.larepublica.com.pe "There was a US government tracking aircraft in the area in support of the Peruvian intercept mission," was the official statement from an embassy official in Lima. "As part of an agreement between the US and Peru, U.S. radar and aircraft provide tracking information to the Peruvian Air Force on planes suspected of smuggling illegal drugs in the region. U.S. government tracking aircraft used for this program are unarmed and do not participate in any way in shooting down suspect planes Jim and Corey returned to the United States Sunday. They are in North Carolina, where they will spend time with family members before returning home to
~~~~~~

Muskegon.

Thanks for all the Prayers, Patrick Herman KI8EP cousin of Jim Bowers"
~~~~~~

The United States government is involves to aerial warfare
in a far off land trying to solve domestic consumption problem.
Makes no sense.

As a Technician Plus, she had no HF frequency privileges
below 28.5mhz other then Morse code CW emissions.
Like many United States missionaries that travel to
distance lands to help other, they need access to
HF bands for long distance communications back
to the United States. Until just recently our government
required applicants to pass an unnecessary 13 & 20 wpm
Morse code exam. This test served no regulator purpose,
and is not in conformity with 5 U.S.C 706.
Makes no sense.

It long past time to delete ITU rule S25.5
and FCC rule 47 CFR 97.503(a).

Larry KC8EPO

No doubt a lot of them do just that.

Thus are the seeds of collectivism. If only one child's life is saved,
guns should be outlawed. It's a slippery slope.

The solution is to allow private organizations to select their members
and reject *anyone* for *any* reason. It falls under the heading of property
rights. IMO, if the Boy Scouts don't accept any public money, then they
have a logical right to bar gays or even anyone with brown eyes.

So far as I am informed there has been no other nation with the numbers of hams that would cause the crossmode congestion of the sort that is rather certain to result if the band mode segments were dropped. I do clearly remember when SSB was beginning to make inroads into AM in the 50's and 60's, here within the US of A... lots of contentious scrapping was invloved.

A lot of the problem is merely the result of prevailing attitudes. If hams were still nearly all gentlemen, as it was, one might suggest that the problem would be self solving. Unfortunately we have far too many hams today who disdain the term.

And at that, the FCC saw fit (rightly I am convinced) to partition the bands long ago, and with good and sufficient reason (probably as much to protect foreigh operations as anything else). Nothing has since happened that would indicate that hams have moved in the direction of better cooperation such that any modification of the band segments is indicated.

Some time ago I heard about a proposal to move the ham band on 40 down a 100KHz, so it would start at 6.9MHz and end at 7.2MHz. Thus avoiding the broadcasters above 7.2MHz. Who/what is allocated in 6.9 to 7MHz anyway?

> Bill, So am I stuck on 10 meters then?

You can do a decent job with an 8ft vertical section and a
large top hat along with a large ground plane. If I were you,
I would install a 100ft by 50ft top hat at exactly the legal
height limit and I would make it as ugly as possible. :-)

You really have no clue, do you? Despite your longtime license.
CW ops stay out of the SSB portions of the band because they WANT to.
The day that band segments are dropped we will see that there is no such
reciprocity from the SSBers. In particular, the code haters.

Well, failing that, I would put up the biggest, ugliest legal
antenna that I could. :-) An 8ft vertical section between a
large ground plane and a large top hat would make a pretty
effective antenna. You could even mount a screwdriver antenna
in those dimensions.

How CAN a fellow of your education be so far off base??

A Tecbnician class license, obtainable easily from sitting through a single day of "cram school" wherein the applicant learns nothing beyond a few memory tricks with which to answer at least 70% of the very questions with their exact answers he learned in the same session -- the graduate gets full 1,500 watt privileges on a vast array of frequencies using gear that he has no clue to what is inside..which at that power level definitely has hazardous voltages that -to me as a former Aircoupe owner and Cessna jock- make a simple takeoff and landing a piece of cake.

Evidently you've never seen the inside of a high powered transmitter. Anyone groping within had better know, and know well, in advance where the gotchas are located.

In case you hadn't heard- you might as well fall 10,000 feet as 10, most of the time. The medics say that if you fall your own height you are at high risk for life threatening injury.

It long past time to delete ITU rule S25.5 and FCC rule 47CFR 97.503(a).
However, we have no objection to the continued use of CW emissions.

Go to http://www.nocode.org/

> Condemning all members of any group for the actions of some members of the group is simply an evil thing to do. That is the basis for collectivisms like racism and sexism.
>
> However, private organizations should have the right to admit or reject anyone they choose. If the Boy Scouts don't accept any public money, they have the logical right to reject men with brown eyes if they so choose. I know that's politically incorrect, but that's the way things should be. It broadly comes under the heading of property rights.

Your logic is really amazing.

Pedophiles, adult males who prey sexually on juvenile males, are a presumably small subset of homosexual males, who comprise a small percentage of all males. How the duece can you equate that to "murderers are a minority of men" and act as though it was in some way equivalent? Are you really that far out of touch?

The Boy Scouts should not allow homosexuals to be scout leaders for the simple reason that it is well known that pedophiles naturally gyrate toward group settings where vulnerable juvenile males are concentrated, and those settings where they are most likely to be able to have close isolated personal contact with the youths.

That alone is sufficient reason to eliminate homosexuals as scout leaders or officials in any capacity.

QUOTE FROM ARRL WEB PAGE

Amateur Radio Numbers Show Post-Restructuring Growth Spurt (Apr 20, 2001) -- Amateur Radio is experiencing a bit of a growth spurt in the wake of the amateur license restructuring that became effective a year ago this month. FCC licensing statistics as of the end of March--the most recent complete figures available--show a net gain of approximately 6600 current licensees, or about 1%, from last April, when restructuring went into effect. Prior to that, the number of amateurs had remained relatively stable since 1998.

END QUOTE

So much for the "new blood" theory of those who professed "Give Them No Code And They Will Come" camp.

Any "salvation" of Amateur Radio will NOT come from dropping the code, either as a testing requirement for HF or no-code for the rest of it, not that any salvation is necessary, but some seem to think so.

This is what Lennie calls a "strawman". The issue has been out there for 40 years now, 10 of which have had a no-code alternative. It's been a panacea, at best.

Other than occassional spurts here and there as other technolgy cycles have come and gone, Amateur Radio has pretty much appealed to a certain type of mindset, and try as some will to make it otherwise so, I imagine it will always remain this way.

Many will argue that there are faster, better ways to communicate. This is true.

But Amateur Radio is as much about FUN as it is about "technology". Anyone can pick up a cellphone, dial a series of numbers and be in contact with someone in Brisbane, Tokyo or Moscow in seconds.

But just dial up "any old number" on the old cellphone and say "howdy", and let me know what your reception on the other end is. When you send "CQ", however, regardless of the mode, you know you are going to be chatting with a like-minded person on the other end.

Not so if you just dial 867-5309 and take your chances...Jenny might just as easily call the cops on you for harrasment as engage you in a conversation.

It's also about learning. And like any other technology or technique, it requires the user to crawl before they can walk and to walk before they can run. And yes, there are those who can stand right up and take off in a trot "in no time flat", but that is the exception...NOT the rule.

Thankfully the FCC has not seen fit to micromanage the licensing structure, but they have, through the input of the ARRL and numerous public comments, created a licensing structure that SHOULD allow the average citizen to advance in such a manner as to have a certain degree of knowledge and competencey when they reach certain levels.

UNfortunately, we presently hamstring (pardon the pun) ourselves with a "program" which does absolutely nothing to really create a learning enviroment, nor does it foster the same degree of respect that it once did BECAUSE of that lack of enviroment.

Amateur licensees USED to have a degree of respect in as much as holding an Amatuer license meant that the holder had assimilated a certain degree of radio technology knowledge.

No longer.

How can we change this?

(1) Close the question pools. I know, "We have heard that before". However often repeated, it still does not make it any less true. Closing the pools to SPECIFIC Q's and A's will force prospective licensees to KNOW something about the subject matter.

(2) Foster and support the "Elmer" concept. Local clubs and individual volunteers who are ready, willing and able to walk the student through the hoops.

(3) Peer pressure of non-compliants. Just like it says. If someone doesn't want to "play nice", we let them know. I whole heartedly agree with those who suggest taht many "newcomers" don't ant to be subjected to the goings-on of some ner'-do-wells. And if this doesn't work, enforcement will. No one want's to swim in a pool that has a certain brown effluent in it...Jammers and the "Liberty Network" idiots (and likeminded jerks) are OUR brown effluent.

(4) Encourage club PARTICIPATION. Thee are lot's of folks who get an Amateur License for no other use than to pass "honey-do" traffic, and that's fine, I guess, but what a waste!

Whatever you do, it's RADIO! Have fun.

73

That's not going to last either. Once the "computer" becomes just another
appliance
that controls data transfer from fiber optic cables to various digital video and

data home gizmos, that'll be the end of it. Who the hell's gonna waste time with an appliance that downloads the latest bread recipes to your digital toaster? Maybe ham radio gets rediscovered.

Great, so there is future for ham radio after all...

Give it a few more years and the Internet as we know it today will be as boring as "rig hr is". Hell, I am already bored with it. You can only absorb so much Usenet crap, e-Bay hype, idiotic personal web pages, chat rooms for morons and porn. In the words of Homer Simpson: "Internet?! Is that thing still around?"

"J. Duffy Beischel" wrote:

> I still can't believe people who keep wanting to hold the code so near and dear. If you want to use this form of communication, great. It is outdated.

With all due respect, this opinion is subjective. Fly fishing is still around but one would hardly call it obsolete just because there are commercial fishing boats out there. When the conditions get marginal and SSB signals fade into the noise, CW is a reliable form of communication. Therefore, people will still be able to dx around the world while those without CW knowledge are restricted by sunspots to talking to their neighbors.

> Keeping it does not attract new hams. Kids with computers are just not excited by the prospect of morse code. People have to get used to change and quit clinging on to the past.

Discarding it doesn't seem to be attracting new hams either. People who view ham radio as a substitute for cellphones are not hams in my dictionary.

> Second, the ARRL can't win. If they support all hams passing a 30 WPM code test, the coders are happy and everyone else gets pissed. If they support no-code, all the old timers that cling to the past get pissed. They can't win.

I somehow fail to see a ten mile lineup of people who can't wait for Morse code to be discontinued so they can jump into 160 m dxing, contesting and building radios. Would eliminating any and all testing increase the number of ham radio operators? Sure it would. Do we want to increase our numbers in such a way? No, we don't.

Awwwwwhhhh Jim, give us an ever-loving break. Nobody at NCI wants to end CW use. They only want to end Morse code skill testing. Skill at PACTOR is not tested for typing ability.

Perhaps, if Dick would give us a list of licensed amateur radio operators
operating outside of Part 97, that would help.

All the hams to whom DXing around the world during the low of the sunspot
cycle is important, will be forced by reality to learn Morse code. Being
forced by reality to learn Morse code is magnitudes superior to being forced
by the FCC to learn Morse code.

> Discarding it doesn't seem to be attracting new hams either.

What????? Subtract out the nocode techs and what have you got?

But, but, but, Jim, using their own argument - isn't it worth it if only one life is saved by calling off the drug war? Is the drug war worth the killing of children? I'm sure this is not the first time but of course, there is a bright side. That dead child will never use drugs so they did him/her a favor. A lot of drug users have been killed by the authorities and saved from ever using drugs again. Some drug users have apparently been murdered by the authorities in order to obtain their possessions under the RICO(sp?) laws.

When a civilian pilot is maimed/blamed and his passengers killed for not being on the "right" frequency over a Western country during peace time, the cat is out of the bag. The anti-drug Nazis are in control. God help the innocents who get stepped on in this fascist process.

These are the words which preceded the question you asked:

> "like who is it that has stridently demanded
> their "right" to the airwaves, whether or not they conformed to the
> requirements."

I find nothing in those words about eliminating CW use. And similarly my response was unrelated to such an idea. Some of the folks on the list have indeed argued that requirements they have not met be eliminated - presumably in order that they might be able to obtain greater privileges.

73, Jim AC6XG

The use of 13 & 20 wpm Morse code exams to bar otherwise
competent missionary operators was also preventable.
Unfortunately, a few procode forever over advocates corrupted
the public due process of FCC. The 13 & 20 wpm exams
should have ended in 1990, not 2000.

You right, below 28.3mhz, or more precisely 28.1mhz,
since Novice and Tech Plus can use data between
28.1 and 28.3mhz.

Actually, the vast majority of these doe-related deaths are a direct result of the Dope War, in the same way similar deaths were common during Prohibition but stopped when that absurd policy went away.

In regards the foreign operation by USA citizens in South America, the FCC web site states: "The FCC does not have or provide information on the specific requirements for reciprocal operation in foreign countries. FCC-licensed amateur operators should make their arrangements with the appropriate governmental agency in the foreign country."

If what you say is true, then we have South American countries permitting USA citizens frequency privileges that their own country denies. Makes no sense.

When the privileges authorized by the FCC license grant are Technician Plus operation privileges, the corresponding CEPT operating privileges are CEPT radio amateur class 1. The Technician plus operating in Europe can use 20 meters, but can not use 20 while in the USA. Makes no sense.

Very true indeed as I certainly owned ham gear before
I was licensed. Likewise the ownership and/or the home
brewing of ham equipment is NOT illegal at all. Individuals
can do so as long as they do not put a ham transmitter on
the air.

That is absolutely not NCI policy.

>Do you think a majority of the present NCI Board of Directors would vote for
>such a policy?

I believe such a vote would fail. I personally, as you and
others know, submitted suggestions to VCC to improve the testing
to make it less prone to memorization. I believe the ability
to radiate power at 1500 watts PEP is not adequately addressed
by ham theory required for technician licenses. I believe
no hams should be limited more regarding power that is
better reflected in the test syllabus for each licnese class.

As a hypothetical, I would have to look at the
specifics. Frankly, I don't see that happening
in any case in the immediate future (1-5 yrs).

The issue may well come to the table, if and
when use of the "non-phone" segments subsides
to where there is clearly congestion in the phone
segments but less than full usage in the non-phone.
That may hinge heavily on the code users to
keep up their use...i.e. use it or lose it.
The refarming of the Novice segments made
good sense to me even though the FCC avoided
it. Ain't much, if any, activity in those segments
at all.

Cheers,
Bill K2UNK

Give us one real reason to build their own radio?
It sure can't be the economics, it sure can't be
to get a better rig, ...

> Hey Bruce, where are you? You had it right all along,"Without CW it's
>Just CB"!
>These clowns prove it more and more with every post.

The problem you and some others have is that you just don't
want to deal with reality. How many people do any work on
their own vehicles anymore...because the complexity
has surpassed the backyard mechanics skill set (and
tool set)? The same is true for most consumer, ham
and industry radio equipment.

Cheers,
Bill K2UNK

Yet you avoid making the specifics as to what that should be.
Are you saying that one of those basis and purpose of
ham radio is to have hams that are capable of DESIGNING
and building their own radio equipment from components?

If you say yes, then I'd say that has generally NOT been the case since beforee WW-II.

Cheers,
Bill K2UNK

>>students get these days?
>
>Who will design the tube amplifiers of the future, Bill?

The point is that the design of those tube amps is far more
a specialty today than the general theory of all tubes
which I learned in tech school in 1962/3. The focus today of
basic circuitry, basic components is solid state. The use
of tubes at all now is very specialized applications.

I'm saying there is no requirement to do so.  The CHOICE of any
individual to build something is their choice.  Build it
```

if you want. I believe, however, that there is no expectation in the FCC that the ability to design and build homebrewed equipment by hams at all.

>Since they don't need to ever build anything, you agree
>with Cecil that there is no reason for hams to know anything about radio
>or electronics technology.

Not at all. There is, I believe, justification for knowing the basics, especially regarding safety to one's self and others, interference, etc. You can not adequately be safety conscience without knowing the basics.

>No Not at all..

Actually, it is very reasoonable for VHF/UHF.

I worked CA, TX, CO and many other states
from my home QTH in NJ on
6m with just a 5 element beam on a short tripod that is only
about 7 (maybe 8) feet above the peak of my roof.

> I cannot even put up a R-7 in my backyard the size of the
>lot is 150' x 225' plenty of room .

You have more than adequate space for an 80m dipole then.

>There is a Home depot within 200' of my
>front door the roof top is higher than my antennas are allowed, the local
>post office which is directly across the street, the flag pole is higher
>than any antenna I can have.

Sounds like you have good reasons to be able to apply
for and get a variance then. YOU are the one that must
live across from that Home Depot. The Home Depot
folks don't care if you want a variance. Woud your
immediate residential neighbors care?

>A ham in our town got a variance for a 35'
>tower 2 months before I applied for my permit. The top of my house is 22' to

>appreciated.

Have you applied for a variance for a simple verticle? If you wanted a 10/12 foot verticle, that would seem to be a pretty reasonable request to get granted.

Have you tried getting other hams in your town to get together to present a proposal to allow the height to be greater than 8 feet? Odds are that 8 foot hight limit was put on the books years ago and none of the current city council members even know why it would be limited to only 8 foot. You might just be able to get them to change it.

For a 40m or 80m dipole, you could run that between trees if the property is big enough. There are also other designs, less than idela perhaps, that could get you on 40m or 80m within that 8 foot space.

If you are just waiting for something in your city to change, don't hold your breath, existing laws are rarely reviewed for current applicability exceptwhen attention is brought to them. The ball is in your court.

Heck, you might think about running for town council yourself to help make things better.

Cheers,
Bill K2UNK

Just who has demanded their "right" to the airwaves
where they have NOT conformed to the requirements?
Not one person on the NCI board has ever made such

a demand. Have we (NCI) petitioned for, commented
on and endorsed changing requirements? Yes we have,
but that is certainly not "demanded their "right" to the airwaves
where they have NOT conformed to the requirements?"

I think that is totally correct. Just as is the case today
with QST and CQ magazine. Pop Electronics? Are they
even still around? If yes, do they devote any space to ham
radio?

Cheers,

Bill K2UNK

Dave, you did not disappoint me with your reply. What else would one expect from a employee of a government agency that recently described the hacking to death of ethic-group women and children as not meeting the precise legal definition genocide.

The death of Ronie Bower and her child is indeed a tragedy. It also shows the failure of US policy. We find USA personal directing a Peru war plane into position to shoot down civilian aircraft. Would we permit that in the United States? I think not.

As for the connection the FCC amateur radio I would recommend that you read
the WT Docket #98-143 comments filed missionaries. They may enlighten you.

Well I have to agree with you on this one Steve. However, I don't see the connection with Hans. The illegal usage of drug in our country is a very serious public health problem. Aerial combat in Peru with civilian aircraft is not going to solve the problem. You should ask some of your local elected representatives to spent a weekend in ER with you. The solution is here not there.

Don't know. Once I got into ham radio, I started reading ham radio
magazines - figuring that would be the place to read about ham radio
related topics. Even today, most of the ham radio electronics
construction projects articles are written by hams.

WASHINGTON (CNN) -- In 1994, the Pentagon opposed providing "real-time" aerial tracking data to assist Peru in its policy of shooting down civilian aircraft suspected of drug smuggling because it could lead "to the death of innocent persons and would likely be a serious diplomatic embarrassment," declassified documents show.

The documents, obtained by the National Security Archive under the Freedom of Information Act, are posted on the Internet at http://www.gwu.edu/~nsarchiv/

Two Americans died Friday when a Peruvian fighter -- with guidance from a U.S. surveillance aircraft that was looking for drug smugglers -- shot down the missionaries' plane.

A State Department memo dated May 1, 1994, outlined the vigorous internal debate over the policy, and warned that the Pentagon had ceased providing "real-time tracking data because of its belief that using weapons against civilian aircraft is "inconsistent with international law."

At one point, the memo warned that "mistakes are likely to occur under any policy that contemplates the use of weapons against civil aircraft in flight, even as a last resort," and that by providing real-time tracking information to Peru and Colombia, the United States is "closely involved in the operation and arguable bears some responsibility."

The Pentagon pointed out that the United States argued vigorously after the Soviet Union shot down a civilian Korean jetliner "such actions violate article 3(d) of the 1944 Convention on Internal Civil Aviation and customary international law."

The State Department was divided on the policy, some arguing that aiding the Peruvians actually saved lives, because it lessened the chances of mistakes. "In a perverse way the DoD (Department of Defense) position increases the risk of loss of innocent life in the Andes," the May 10th memo stated. "DoD provides excellent real-time tracking data. By terminating it they do not necessarily force the Colombian and Peruvian governments to cease their policies."

The issue was settled the next year when President Clinton decided to allow the sharing of tracking assistance "if the President has determined that such actions are necessary because of the threat posed by drugtrafficking [sic] to the national security of that country and that the country has appropriate procedures in place to protect innocent aircraft."

A great eulogy to HPM, but the last word is on page 15, citing the Old Man himself in QST September 1927:

" And as the last embers of the old pipe turn to grey ash, I ask how it all came about : that the ARRL should have succeeded and all its opponents failed. The answer is clear. It is because with our opponents there was always some kind of selfish motive to be served for someone, whereas in ARRL we insisted from the beginning that no selfish motive for anybody or anything should ever prevail. Everything that ARRL undertakes must be 100% for the general good. That policy bred loyalty and confidence. With these two things an organisation can prosper forever."

Food for thought.

In my opinion Maxim's acheivement was the creation of amateur radio as a social organisation.
There were all manner of people experimenting in the early days.
Maxim connected many of them for a common purpose: Relaying messages and thereby overcoming the limits of what was then for most a short range means of communication. He also set up a social organisation with rank and position and defined roles, plus a system of ethics, symbols and signs of recognition.
This system is with today, but sadly is taken for granted and many mistakes are being made at the organisational level, in my opinion.
There were other models: In the UK before WWII the model was the gentlemen amateur scientist: There was an "artificial aerial" ie dummy load license class so chaps could experiment with transmitting technology without actually radiating a signal. And calling CQ was forbidden. They called "testing, testing".
The Soviets ran amateur radio under the Ministry of Sport.
Nowadays because of falling numbers of new entrants to amateur radio there is a push to lower entry standards and remove code qualifications. In the process everything that makes us unique will go.
In ZL all amateurs once had to spend six months on 80m before getting other band privileges. In that six months Elmers and new hams met on the air, assisted one another and in many cases made life long friendships.
Now new hams go on hf and like Tony Hancock in the famous television sketch
"....have friends all over the world. Just don't have any around here."
Removing the probationary period on 80 was meant to encourage new operators,
but instead the numbers dropped and many gave up after a period on the

air.

And in ZL the greatest loss of amateurs is amongst no code licensees.

There is an attempt to solve the problems of amateur radio at by administrative and technical means. I believe these are bound to fail as the problems are social and environmental.

Where are you Hiram? We need you.

73.

What *would* T.O.M say?

I dare not pretend to step into his shoes, but I might dare a synopsis of an imaginery article from TOM, based on his reaction to other observations he had made in print, in yon days of yore . . .

First thing he might do is remind us that we are all young squirts.
Only he had the right to do that.

Then he might remind us about the rotten radio practices that almost beached Amateur radio in the pre 1912 era, because every man did "what was good in his own eyes".

Then, i think, he would walk us down memory lane, as only the Old Man could, considering it would be HIS first hand memory. He would remind us about the previous crisis points, and how we managed to rescue Amateur Radio time and time again thru the demonstration of our SERVICE to our fellows, our competancy and our conduct. Our ability to adapt to a changing environment, and our supreme willingness to study, to show ourselves approved to our fellows, and to the world.

Then he might interject a cameo of sevices performed during the Monongahela Flood Disasters, where Amateur Radio distinguished herself with valour and bravery, especially before the press.

He might remind us that it was this SERVICE, and not our NUMBERS that saved us at Cairo in '27.

Then he would probably conclude with a summary, a typical Maxim maxim: anything worth having is worth working for. We do not build our treasures by lowering it's worth, but by buttressing it's value, it's sanctity, and it's purpose.

We stretch ourselves to meet our goals, not the reverse. And No-Code for the sake of numbers is Rotten Radio, indeed.

And if I would be so rash to conclude, he would
sign off with " T.O.M. "

And I echo your last sentance,:
Where are you, Hiram ? We need you.

NOwhere if it isn't allowed to begin. No prudent parent knowingly allows
his children to be accessed by predators.

You'd do well to be disappointed with yourself. Your own conduct is not exactly exemplary here if I may say. You've cone everything you could to belittle me and my firm assertions on testing which are based on years of hands on experience as a VE while you have none. You seem to believe that you can't be wrong and I can't be right.

And I have given you the very reason why- and exactly why that chaos
WILL result when they abandon band plans in the USA -- there are too few
foreign hams. If you had a clue you'r already know that. But you spend
all your time tinkering with antennas so don't know much about what goes
on on the air.

That is correct.  The FCC pre-emption specifically stated
"transcievers".  No mention was given to separate
recievers (i.e. such as a scanner).  The FCC preemption
protects you if your 2m mobile or HT also can receive
any of the cited frequencies.

Cheers,
Bill K2UNK

1. I am no longer in the employee of the USG.

2. I do not and did not formulate U.S. Foreign Policy in my work in the
communications and information management field.

3. Your attempt to use my past State Department connection as an "Aha!"

is feeble at best.

> The death of Ronie Bower and her child is indeed a tragedy. It also

Larry, do me a favor. Read my response and then attempt a response.
I did not address U.S. drug policy at all.

> As for the connection the FCC amateur radio I would recommend that you read
> the WT Docket #98-143 comments filed missionaries. They may enlighten you.

Take this as fact: The death of the woman and her child had nothing to
do with amateur radio operation or with morse code testing. That you
tried linking the two reveals you to an opportunistic and self-serving
boob.

Hans, thanks a million for that URL! I read the thread and tried
downloading it. Can't say I was impressed by NuMorse as it is really stuck
in LOW gear - complete with the spacing and all. However, at the URL you
gave there was also MorseCat. Now there is a neat program! Ran really nice

in Win98. I tried the cypher groups at 30 - I've got a bit of work to do.
All text is easier, but it has been many years since I copied 40 without
error (that was the fastest tape the US Navy had at Bainbridge Md when I was
there in 1967). Heck, I've got something to play with! I'll have to see
what I can get back to before I get the HF rig.

Thanks and 73 from Rochester, NY
Jim AA2QA

While the following is not *exactly* directly following the line of thought in the thread, I think it is relevant in the light of changes on societal thinking in its pursuit of "enlightenment" and the discarding of past mores.

Historically, homosexual activity has been regarded as deviant, abnormal and, indeed, disgusting. I can agree that to mistreat ANY human being just because that person is known to be "gay" is wrong, however. As long as that person conducts him/herself in a manner that is proper, dignified, and circumspect in public, then I should treat that person the same as anyone else I might deal with in the public arena. Hetersexual persons may be uncomfortable in that person's presence, but the obligation to treat that person kindly is there nonetheless. And I, as well as others not of their persuasion, DO feel ill at ease with those who appear to be "effeminate" or a little too "friendly".

There is another "group" of people called Pedophiles who have an unnatural attraction to children and, indeed, cannot relate to adults of either sex. Their attraction may be to boys or girls, but the majority of pedophiles *seem* to be men for whatever reason.

Everybody has an agenda these days. Remember, I stated earlier that the idea of "gay-ness" was something that was not accepted, or, rather, the attending ACTIVITIES of gays was not accepted. In, say, 1965, the idea of having known gay Scouts, or Scout Masters would not have even been brought up. Today, the issues has taken on the cloak of "rights", and in a more liberal, humanistic society, the gays have seized upon this liberalism to bring forth, not the fact that they are gay, but that they should be allowed to openly practice same, and even teach this "lifestyle" as an equal alternative to the hetrosexual lifestyle to our children.

It has been argued that pedophiles are not necessarily gay, but even using the slide rule of ratios (so many non gay pedos to so many gay ones, etc), it would follow that there ARE some pedophiles that are gay. A certain number of those gay pedos WOULD prey on young children. It is not possible to tell who, how many, where, or when one of those would molest a Scout. In years past, the BSA did have some kids molested by other (gay?) Scouts and they were sued. Farther back, a defined policy to protect Scouts was not in place simply because the mores of the time were *usually* sufficient to deter most molestations. Sure, they did occur, I am sure, but not on a scale that appears to have increased in lockstep and in proportion to the relaxing mores of our society. Thus, a policy to exclude sex offenders, felons, and known gays from scouting was put into place. And that galls the gay/lesbian "rights" crowd.

Back to the pedophiles. There is another movement behind the scenes that hasn't achieved any acceptance-----yet. And they are counting on the lessening of standards, the cheapening of morality to bring forth yet another form of perversion to "normality" under the guise of "rights". Yes, these are the pedophiles, the sex offenders, the "boy lovers" who want laws against adult/child sex lifted so they can engage in sex with our underaged sons and daughters! And if you think it is NOT true, then do what I did. Search on the internet for "Pedophile", NAMBLA (North American Man/Boy Love Association), and "boylover". Find a website---www.boylinks.net. If you haven't been aware of this before, you will be shocked, dismayed, and angered. If you are a parent, as I am, you should be alarmed upon viewing the agenda, the goals of these people, photos of kids, AND stories that will/should infuriate you. Some of it is quite harmless--pictures of kids playing sports and kids just being kids. BUT there are others of NUDE boys that shouldn't even be on the 'net. They are there to appeal to the deviant, sick minds of perverts--perverts that would LOVE to be Scout Masters!

NOW! Those that say, "WHY, society would NEVER accept or legalize what now is considered abhorent, sick, deviant and illegal molestation of our children". And I ask WHY NOT? Again, in 1965 or even later, society would not accept an open, legal "marriage" of gays. It was abhorent, sick, deviant and illegal behavior. Yet today, there are alleged "clergy" that will "marry" queers. Society has become so "enlightened", so sensitive to the issue of "civil rights", that we are blinded to what is RIGHT. So is it, therefore, a surprise that any group with an agenda brings forth said agenda, no matter how deviant and wrong, by cloaking it in a righteous robe of "CIVIL" rights? Yes, they know that this is the only path to their goals--the path that takes a route thru the briars and brambles, the underbrush of liberalism where we cannot see the adversary, and, ultimately blindsides us into conceding THEM their "rights".

Therefore, in order to protect even ONE Scout, one Church youth group, one child from being placed in a position that he/she neither expects or understands, the battle line MUST be drawn and the only way to do that, even at the expense of one homosexual who might NOT molest a child, is to exclude the entire group. The rights of children must be given priority because an adult should be old and mature enough for his wants not to hurt him--especially if he "wants" to molest MY kid!!

In conclusion, two things come to mind. The first is, referring to a comment Dick made earlier; "body of experience". I ask WHOSE body do you want a pervert to have EXPERIENCE with? Your son? Your daughter?

Your 12 year old? Is it OK with you if it happens to be MY 13 year old and not yours? Again, the line must be drawn in the sand somewhere.

The second item is something I have heard and never forgot: "You MUST stand for something, or you'll fall for anything"!

Thanks and 73

Jerry

Steve, I agree with you 100% except for the cellphone thing. That would not have worked very well a couple of years ago in the Northeast. Neither would the internet. People forget that the large infrastucture of our 'normal' communications systems can also be its' downfall. Take out the power over a large area (say a state or three) and suddenly you are either 'wireless' or without communications!

I sure do agree about the Q&A stuff. Heck, let a computer generate the numbers on the spot for the various resistance, reactance, resonant frequency, and other stuff. No two exams the same. Sure, the safety questions, operating proceedure, and similar may be mutiple guess, but again - don't publish them.

Morse code may not make much sense, but the technical aspects have been so dumbed down that I simply checked off random answers to resonant frequency problems since I didn't have a calculator, didn't feel like extracting square roots (I can without guessing), and knew I had enough correct answers to not have to worry about it. Besides, going through the whole smash at once in 1993 took enough time without trying to see how high a score I could get.

You mean "Fixed and Mobile" (an international designation). "Land Mobile" is US slang for same.

International agencies such as national Red Cross/Red Crescent Societies and the Salvation Army use spot frequencies in that region when they need to talk to each other in international disaster relief operations.   In the US, the ARC gets such allocations on an STA basis.

Or was iot the one that the League filed after the loss of the
220-222 MHz portion, and the DC Circuit ruled against the League?
That one doesn't show up in Pike & Fischer so I assume that it may
have been an unpublished summary decision. (Chris is at NAB this
week.)

It's not just a problem of counterfeit stickers. A Type Accepted radio can
have a diode snipped out without disturbing it's sticker.

  If the cop wants to be a "radio cop" he damned well better have
  the qualifications and knowledge that an FCC enforcement agent has
  (electronics technician level) or else he's no better than a "police
  wannabe" trying to do more familiar police duties.

  Your reliance on a sticker/label to determine compliance is about
  as accurate as reading the nameplate on a transformer to determine
  the output voltage that it is supplying.

  The FCC will not and does not rely on that alone to intitate seizure
  of operating equipment (marketing violations are another story) -
  technical measurements are required.

  Rules of evidence.....

  Totally preempted by FCC pronouncement.  Note the frequencies  -
  1940s era.

  I was with the LA Sheriff's Department in the late 1950s and the
  only persons who applied for such permits were sheriff's deputies
  who were required to do so by departmental regulations.

  Minus 2 on the troll-o-meter.

Asking what is the most important function that hams perform is a stupid
question?

  Doesn't the news about the "toilet plunger" assault in NY or the
  Rampart Division falsification-of-evidence mess in LA or the asset
  forfeiture scandals across the country get to your part of the
  world?  (I saw some of that first-hand when I was a reserve officer
  in a major police department.)

  Rodney King's beating was about a speeding violation that went
  "downhill from there".

All you've given is an opinion, Dick. Will chaos happen simply because
your opinion is that it will?

Until the 1965 Watts riots, the LAPD used 1730 and 2366 kHz as dispatch frequencies. The rioters jammed them, so the department finally shut down the 1930s-era AM transmitters. I used to earn coffee money by tuning auto radios to receive 1730 in the mid-1950s.

Following exactly the same reasoning and given that the majority of child molesters are heterosexual, would you say the battle line MUST be drawn and the only way to do that, even at the expense of one heterosexual who might NOT molest a child, is to exclude the entire group?

Oh well, maybe not. Maybe so many present hams will lose interest and
drop out that there WON'T be so many left.

How about the California guy who was shot because they wanted his
property? I saw that on "Investigative Reports".

Man you are *the* study in strangeness....
Should the FCC then be responsible for him legally allowing a child to
have free access to uncovered high voltage because he was not required
to learn that he was dealing with dangerous hardware, and the need to
protect himself and others from it? FCC should become a party to child
neglect?

So I suppose then that you sent your daughters out under the
supervision of known child molesters?

The FCC is not responsible for it. The stupid parent is responsible for it.
Is the federal government responsible for stupid parents allowing their
children access to guns? You liberals want to make individual responsibility
a thing of the past.

We are not talking about known child molesters, Dick. We are talking
about unknown child molesters. There are twice as many heterosexual
child molesters as there are homosexual child molesters.

Vacuum tube design theory, technology, and techniques are
now well known. Specific designs are aided, improved, and
controlled on the production line by solid-state architecture
sensors and computers (TV picture tubes and computer
monitors).

In heavy production worldwide, right now, descending order:

Color screen cathode ray tubes
Magnetrons (microwave oven production)
Travelling Wave Amplifiers (broadband microwave amplifiers)
Broadcast-use power amplifier tubes
Photomultiplier tubes
Electron-multiplier imagers (night vision scopes)

If it is so "meaningless," why is it still required (internationally)
as an HF-privilige license test? Oh...I understand, it is for those
who have been licensed as a long time and had to take the test
in order to get that license. Yup, understandable.

Has the FCC ever, repeat ever hinted at outlawing CW on the
US amateur radio bands? I don't think so.

Strange...I've not seen that in the professional radio-electronics
world. Must be an amateur thing.

>The effect of eliminating code is simply to piss off the people who
>enjoy CW, and it will certainly NOT rekindle interest is old stale
>technology like radio.

Interesting conclusion. "Effect of eliminating code is simply to
piss off the people who enjoy CW..." No one, including NCTAs
in here, are advocating "elimination" of the code.

>It isn't old timers against "new age" radio operators.

No? Define "new age."

>It is people
>who grew up loving radio and who were thrilled by the concept of
>talking to people all over the world trying to understand how people
>view it as something no more magic than a telephone.

NCTAs are a spoiled bunch, no doubt. I'm an NCTA. I was just hitting legal age when I QSYed a 1 KW transmitter for the first time. In 1953.

"Magic." I was at the Magic Castle in Hollywood recently. That's basically a professional magician's club, non-magicians get in only on the invitation of a member (a professional magician). Plenty "magic" there, but it is treated as a guild, a craft, actually a technology of effects. People can appreciate such "magic" even if the magicians think of themselves as entertainer-illusionists.

"Magic" is what you make it, but if entertainer-illusionists make bad magic, folks won't like it.

>Hell, look at CB. It peaked and died way off. The only real activity

>uncomfortable for people who used to enjoy it.

"Discomfort" is caused by trying to keep the past the same even though the technology and everything else has passed them by.

There is plenty that can be done. Learn, grow, keep on advancing. Or complain about discomfort when trying to hold onto the past.

Incorrect.

>The claim
>had always been that the code test requirement was discouraging
>brilliant, computer-literate young people who would magically transform
>the landscape of amateur radio communications technology if only they
>had the fetters of this time-honored mode removed from them.

Incorrect and an attribution of the PCTAs, not the NCTAs. False.

>They
>have claimed the Morse code, and it's testing requirement, to be
>everything from "lame" to "ethnic cleansing" -- and insisted that those
>who support continuance of the testing requirement were not in step
>with the "inclusive" nature of this hobby, and, therefore, politically
>incorrect.

Factually and logically incorrect. NCI is advocating only the
elimination of the morse code TEST.

> No, Bill -- the NCTA and their apologists throughout the years have done
>an excellent job of marrying the concepts of Morse code skill with
>technical stagnation -- thus making proficiency in Morse/CW and technical
>competence mutually exclusive in the extreme.

Morse code skill has never been proven to advance any state of
the radio art in any radio service.

>You would have to undo
>over a decade's worth of Fidonet/Usenet debate on this topic to convince
>me otherwise.

This is not Fidonet. This is not a BBS net of any kind.

>I have read and authored the equivalent of dozens of
>full-length novels' worth of messages that relate to this topic, and can
>call myself an expert on the subject without any fear of exaggeration.

tRoll calls himself an "expert" without any fear. Not a problem.
The problem is that no one else considers him an expert.

>The link between technical incompetence and Morse code skill is the
>very foundation of every argument that has ever been made against the

>pre-Restructuring status quo in code testing.

Incorrect.

>This is the truth, the only truth, and the only reality.

Delusion.

>You cannot ever escape this reality in a
>feeble attempt to justify what has been done to permanently obviate
>any future growth in the use of the Morse/CW mode.

Morse code in its present form of aperiodic on-off signals representing English language alphanumeric and punctuation characters is approximately 157 years old. Given the highly untechnical nature of that, it is unlikely to see any "growth" in technology as applied to radio.

While radio in its infancy could not use any method except on-off keying, radio has developed enormously in the 105 years since its birth. The development no longer requires morse code for any regulatory license test reason.

> Deny this if you will, but it is the truth.

tRoll is advised to follow his own words. There is no longer any valid reason to keep a code test for amateur radio licensing. Deny that if you will, but it IS the truth.

Nursie should have paid attention to what another posted in here on the FCC's Enforcement Bureau...which was correct.

This newsgroup is about policy, not technology. Biot and Savart's Law is not practiced the same as codification of regulations...no more than E and H planes concern aviation. Anyone may initiate the beginning of another newsgroup on microwave technology by contacting two of the radio amateurs who sporadically post in here.

>response was unrelated to such an idea.

Nobody can argue with those first sentences in the paragraph...but:

>Some of the folks on the list
>have indeed argued that requirements they have not met be eliminated -
>presumably in order that they might be able to obtain greater
>privileges.

The last sentence is a presumption...of guilt. Some will see
that presumption as the biased opinions of those who would
personally keep the rank, status, and privileges obtained
through old standards and practices.

Is amateur radio to be graded and judged primarily on the
tested code skills of those who are licensed? If so, why?

No. No more on topic than what has gone down in this
newsgroups in the last few days such as these "subjects:"

Submarines
Ship sinkings

CB radio
Missionary killed
Admiral's Masts
Improper conduct of law enforcement officers
Pedophilia
Homosexuality
Boy Scouts of America
3rd Infantry
Ordinances of Los Angeles County
Presidential politics (particularly Democratic presidents)
Religion

Yes...all very "on topic" to amateur radio policy, amateur radio regulations. Of course, nursie, of course.

"> We are not talking about known child molesters, Dick. We are talking
> about unknown child molesters. There are twice as many heterosexual
> child molesters as there are homosexual child molesters.

So...if we eliminate the homosexuals, we have eliminated one third right off
the bat. Of course your figures are most probably wrong. There is no such
thing as "known child molesters" that usurp such a large group. Your numbers
are wrong and self-serving, especially when dealing with what you admit to
be "unknown" child molesters.
Drop back to square one. In all actuality, you have no numbers, no real
facts to back up your claims. Your claims are nebulous at the very best,
shameful at the worst.

>What was contained in the 16 pages of study guide that got me my General in
>1964 that is lacking on the hundreds of pages people have to study today,
>Larry?

Ed:

Pretty much the same stuff, I rather suspect. The only reason why ham study guides are bigger now is because they contain an entire pool of questions and the exact answers, to be memorized by prospective test-takers. The study guides I used in the early '80's didn't seem that big, either -- but I had learned most of what I knew as a result of 15 years as an electronics hobbyist, so all I really needed to learn were the rules, operational techniques, and other ham-specific details.

>Do you think that it was those 16 pages that made me a valuable
>asset,
>or the things I did after I was given my license?

Both, obviously. I also believe that you are a more valuable asset as a ham because you possess functional proficiency in the Morse code -- something I believe all fully-privileged hams should have. I also believe that functional proficiency in Morse code naturally tends to lead to greater technical competence. People capable of gaining good Morse code skills are also usually at the high end of technical involvement for the same reason -- they aren't afraid to work at learning something useful. The overwhelming majority of the hams I've known that have the highest technical skills have also -- almost to the man -- been code proficient, CW-using, CW-loving Extra-class hams.

There are exceptions, naturally, but for the most part the above is the typical pattern among hams. The exceptions are usually the "repeater gurus" who work full-time in the LMR industry, and can build a linked, wide area coverage system out of the scraps left over from a day's work. I know several of them, and they are "Real Hams" in spite of the fact that they don't know a dit from a beer bottle. However, at least for as long as I've been a ham, they have always been accommodated by the Technician class ticket with it's slow 5 WPM requirement, or, more recently, the No-Code Technician license. They had nothing to complain about, and they usually didn't. It's the people who don't want to know or learn anything other than how to work the PTT that need to be addressed in licensing requirements.

The ARRL has been two-faced on the code requirements issue for at least the last decade. On one hand, they're afraid of offending the "older" hams who comprise a large part of their membership base by giving away too much too fast. On the other, they are chomping at the bit to throw away ALL licensing requirements beyond filling out an application form as quickly as possible, in the belief that this will bring in more potential members and more business for their QST advertisers. They once walked a plank over shark-infested waters; it's been a 2x4 since '91, and will soon be a matchstick.

BTW you're completely wrong about Ed Hare. He's his own man here in r.r.a.p; and has proven so many times. The fact that he's totally in the tank with ARRL policies just means he's working for the right firm. If he worked for me, and said one word not in keeping with company policy, I'd stuff him in a cannon and shoot him out the front door, just to make extra sure it didn't hit him in the ass on his way out!

Bill, I'm not going to get into great details here, but it is not as easy as you imagine. Locate a legal piece of CB radio equipment, locate the FCC info, and then tell me it would be so easy to make up a phony sticker. Let me give you a hint - the FCC is not as stupid as you appear to think.

And, of course, you completely avoided my comment that the FCC info is just one method that could be used to detect an illegal device - that I could think of several other methods that could be used also.

Bill, as you well know, I've already answered that question (you asked it a couple of days ago in this thread). Now, if you don't like the answer I gave, fine. But don't keep repeating the same question like you've never received an answer.

First of all, I'm not relying on anything, Phil. And, as for the police relying on that, if you read back over my comments in this thread, you will see that this was offered as only one method, in a range of methods, that could be used to determine if a device is illegal.

In the 200+ page Technician study guide, Now You're Talking, last time I counted, about 80 pages are devoted to the questions. That leaves over 120 pages of other material -- over 100 pages of which are explanatory material for the 80 pages of questions. The Technician is the typical entry point of ham radio today. In my day, it was the Novice, which had a 4-page study guide. Not exactly the "same stuff" by my counts.   Your count may vary.

Didn't you once work as an FCC field investigator, Phil? You know, I can think of one or two incidents where federal law enforcement personnel have went over the edge also. Since you seem to be suggesting that all local law enforcement officers are evil because a handful occasionally go over the edge, should we also think of federal officers the same way because a few occasionally go over the edge also?

What is even more distressing is that you seem to be suggesting that we should have no new laws because of potential police abuse. In fact, your whole opposition to HR-2346 seems to be based on your low opinion of local law enforcement (they're too stupid to enforce this law, too evil, etc). Well, I've got news for you - there are millions in this country that don't think that much more highly of federal law enforcement officers.

For example, when it comes to CB enforcement, I support HR-2346

exactly because I think FCC enforcement personnel has failed miserably
over the last 30 years to enforce the citizens band (a situation that
began long before the FCC started using budgets as an excuse for
everything). In my opinion, local law enforcement can't do any worse
at CB enforcement then FCC personnel have done over the years.

  I'm sorry, contrary to the apparent attitude of many in this
newsgroup, I'm not willing to end law enforcement, and the rule of law
in this country, because a few bad cops occasionally go over the edge.
 The solution is to deal with those out-of-control police officers,
not throw out the laws or resist new ones.

If you think they have an automatic "right" to inspect anyone's
premise because the FCC gets to "inspect a station" on request,
then you have it all wrong. Phil Karn has already
pointed that out to you and others...there is no extension
of that "inspect the station" extended to local police in
the federal law.

Cheers,
Bill K2UNK

Add to that the arrest and handcuffing of a woman for
a seat belt violation in TX.

I am a conservative, but that type of arrest for motor
vehicle violations (other than DUI/DWI) should be
considered illegal.  Sadly, he Supreme Ct ruled 5/4
yesterday that the police can do so.

No cheers on that note.

Neither Phil, nor I, nor anyone else is suggesting that ALL local
law enforcement officers are evil. The point is that there
should not be ANY locals that are in that catagory...AND the
law should be such that it does not foster or offer opportunities
for "evil" behavior by any local cop.

> What is even more distressing is that you seem to be suggesting that
>we should have no new laws because of potential police abuse.

We should be VERRRRY careful to avoid crafting any new
laws that open the door to such abuse. HR-2346 (IMHO) does that.

> In
>fact, your whole opposition to HR-2346 seems to be based on your low
>opinion of local law enforcement (they're too stupid to enforce this

They are not too stupid, they simply do not have the technical
competency to get involved with radio regulations of any kind.

>Well, I've got news for you - there are millions
>in this country that don't think that much more highly of federal law
>enforcement officers.

Abuse by any enforcement agaency (local, county, state or federal)
should be viewed with great disgust by all.

We obviously disagree...and, apparently so does most jurisdictions
since there has been NO rush to enact local legislation as
permitted by HR-2346. I know I would totally oppose it in
my community and I am certain I could convince my town council
peers that it is a subject area best left to the FCC.

> I'm sorry, contrary to the apparent attitude of many in this

We must certainly DEAL with the bad apples. We also need to
avoid creating situations that can foster such bad behavior
under the guise of "doing good."

Cheers,
Bill K2UNK

And you can also nnote the LACK of any specific methods
as suggested by Dwight.  He claims there are several others
he can think of...BUT offers no details.

Cheers,
Bill K2UNK

And once again it is pointed out that His Geezerness has "published" reams of "data" when it suited his rant, yet throws out the "this is about policy" rant when it means squirming out from doing something productive.

Not that I'd expect anything else. It's old pattern stuff now. Same ranting. Same Lennie.

Nonsense, Phil. Police enforce laws all the time without technical knowledge of the technology surrounding the laws they're enforcing. Police have been enforcing scanner laws for years without technical knowledge of radio. Likewise, they have just begun to enforce cellular laws, again without technical knowledge of radio. And local communities have enforced laws regarding antenna structures for years with little or no technical knowledge of radio.

And the same with laws outside of radio - police routinely enforce laws without technical knowledge of the technology surrounding those laws. An officer does not have to know how a bank operates to know that a bank robbery has occurred. A game warden does not have to know about ecology to enforce gaming laws. An officer does not have to know about vehicle design to write a citation for bad brakes. And I could go on and on with examples almost indefinitely.

The point is that it is absurd to suggest that an officer must have technical knowledge before he can enforce a law. As I have said before, all that is required of an officer is that he have enough knowledge to gather information and evidence properly. If "expert" knowledge is required for a piece of evidence, that evidence can be studied by 'experts" after it is gathered from the scene, and that "expert" can be present in the courtroom to give testimony about that evidence.

I was raised in a tiny burg hard by the city limits of Philly. Five
similar surrounding PDs pooled resources to support the communal
police dispatch facility which in the 40s & 50s opersted on some red
Chebby rear fender ball mount & 8 foot whip freq. or another.
>
So anyway Henny Carr the only fulltime cop in town and he lived just
down the street caught wind of the fact that I was eavedropping on
that freq, I guess maybe because I biked my way to one too many
fender-benders looking for blood & gore. Henny was also a bit tired of
the neighbors telling him to do something about my felonious assaults
on their TV reception. Henny caught up with my Dad one day and told
him that I shouldn't be doing either, etc. Was not a good day for
wn3yik.
>
Thus it came to pass that my plea bargain deal was cut: I padded
Henny's living room  AM broadcast rcvr up the dispatch freq so he
could listen too and the rest was forgiven.

Do commercial fishermen have to take a test to demonstrate their fly fishing
skills in order to work on a commercial fishing boat?

> It does NOT cover scanners.

It originally addressed amateur transceivers which have out-of-band RX of
public safety frequencies.  The FCC's RESPONSE does encompass scanners also in
that they found that RX reception of public safety frequencies (HOWEVER
RECEIVED) by licensed amateur radio operators WAS for the "public good."  The
dispute that gave rise to the ruling was that of an amateur transmitter with
expanded RX (i.e. public safety band included) installed in a vehicle and that
local jurisdiction's law banning "mobile scanners."  The local jurisdiction
claimed that the transmitter, by having the expanded RX, violated its scanner
law.

Try reading the BACKGROUND of the notice.

I know you have a "point" hidden somewhere in your mind when you asked
that question. What is the point?

So as long as it's not our ox being gored, everything is just fine?
That is the way fascists operate. Divide and conquer. Does any thinking
person realize that if hams are the only group left with scanner
privileges, those privileges can disappear without much of a whimper.
The ploy is to take away scanner privileges one group at a time.
In the meantime, hams can feel really special since they will be the
last group to lose scanner privileges.

Actually, it's simply a presumption of motivations. Others on the list
have no expectation of personal gain from changes in the requirements.

> Some will see
> that presumption as the biased opinions of those who would

I have no absolutely idea. That topic extends beyond the scope of my
comments.

Testing never totally prohibits stupid behavior.
```

The state licenses drivers who, immediately upon
being licensed can go buy and drive ANY automobile
they want that is "street legal" which could be
a HIGH POWER Porsche, Ferrari, etc and ten go drive
it at excessive speeds. There is NO liability in such
situations attached at all to the licensing entity.

Cheers,
Bill K2UNK

It's a good thing for Hiram that he isn't around.  If he were around, the
present ARRL board of directors and League employees would seek him out and
attempt to destroy him.  They won't accept anyone with an opinion on amateur
radio that differs from their opinion.  The present ARRL leadership would
feel threatened by Hiram because he would not agree that their dumbing down
amateur radio policies would be a bennifit to the service. So, they would
need to destroy him in order to continue their subversive activities.

>Vacuum tube design theory, technology, and techniques are
>now well known.

A good point. A modern engineer who needs to design a tube circuit will find no shortage of reference material and can probably whip one up pretty quickly. It is certainly easier to design a tube amp than it is to design some of the modern VLSI ICs.

I haven't seen any one on the NCI Board propose that people should have access to spectrum without meeting the requirements in Part 97. Can you provide any examples?

There is a big difference between asking that requirements be changed and asking that people be given priveleges without meeting the priveleges.

Are you suggesting that those who serve on the NCI Board should not have the right to petition their government for redress?

>have no expectation of personal gain from changes in the requirements.

I am glad you added the qualifier. I will offer that even those who stand to gain may not have that gain be their primary reason for seeking change. Motivations are really impossible to know, and in all cases where I have seen people here try to proclaim the motivations or others, that proclamation (happenstance?) matches their agenda perfectly.

Your DNA is also about 50% identical to a green pea. Which half of you is the green pea? You share about 95% of your DNA with a toad, which part is that? There are many aspects of life that are identical across all life on Earth. The genes that control cellular mitosis in a green pea, a spider, a frog and you are identical.

>How can we change this?

>   (1) Close the question pools. I know, "We have heard that before".
>However often repeated, it still does not make it any less true. Closing the
>pools to SPECIFIC Q's and A's will force prospective licensees to KNOW
>something about the subject matter.

How would you address the inevitability of these "closed" pools, sent to thousands of VEs, being posted anonymously and thereby "opened?" I have yet to see what I consider to be a workable answer to that one. Back in the days of "closed" pools there were about 2X the number of questions in the FCC pool than would appear on the exam. Half of the time, when one failed a test and went for a retest, he or she was given the exact same test. "Closed" pool? I think not.

Even so, it is easier to learn the fundamental material, at least to the extent that I did when I passed my General, than it is to learn over a thousand questions without understanding. If you disagree, prove me wrong by learning a thousand Russian definitions and I will cede the point.

>   (2) Foster and support the "Elmer" concept. Local clubs and individual
>volunteers who are ready, willing and able to walk the student through the
>hoops.

This is happening right now, Steve. There is always room for more, but I know of few hams who think that Elmers are not important. They all have the ability to be Elmers right now, but are choosing not to. Just what would you do that would make a significant number of hams who are not Elmers right now choose to do so?

>   (3) Peer pressure of non-compliants. Just like it says. If someone
>doesn't want to "play nice", we let them know. I whole heartedly agree with
>those who suggest taht many "newcomers" don't ant to be subjected to the
>goings-on of some ner'-do-wells. And if this doesn't work, enforcement will.

This is happening right now, too, and that is probably the biggest enforcement problem that the FCC has right now. Some of this "peer pressure" consists of carriers and other unwanted interference to those who dare to say "10-4" on the local repeater.

>No one want's to swim in a pool that has a certain brown effluent in
>it...Jammers and the "Liberty Network" idiots (and likeminded jerks) are OUR
>brown effluent.

If the Liberty Net folks jam ongoing communications, they are rulebreakers. If they fail to ID as required, they are rule breakers. But as much as I disagree with some the things that some of them say , I also believe that our Constitution gives them the right to speak their minds. The biggest rules violation related to nets like the Liberty Net is not being done by the net participants, from my listen.

>   (4) Encourage club PARTICIPATION. Thee are lot's of folks who get an
>Amateur License for no other use than to pass "honey-do" traffic, and that's
>fine, I guess, but what a waste!

Ditto my comments about Elmers. Those who are not participating in clubs have every opportunity to do so right now, and are choosing not to. What would you do to get people who are making that choice right now to make a new choice?

>   Whatever you do, it's RADIO! Have fun.

That one just might work.

Liberals have rights, real and imagined. They want government to pass laws that guarantee that no one will violate any of their rights. They have no responsibilities, it is up to government to take responsibility for everything.

Libertarians have rights, real and imagined. They want government to pass no laws that would violate their right to do what they feel is right, which is up to their own individual interpretation. Responsibilities? They take responsibility for only those things that would not hinder the exercising of their rights.

Conservatives have rights, real and imagined as well as responsibilities. They want government to pass laws to remind us the difference between our rights and responsibilities. There can be no freedom without responsibilities.

Power comes not from the freedom to do what you want but from the freedom to do what you ought.

I think it might be more the appearance of not being able to meet
requirements, and deciding that the easiest thing to do would be to
change the requirements.

And, Cecil, people paralyzed from the neck down are suffering from an affliction, either from birth or accident, right? They are not able to fly airplanes and cannot pass the requirements to get a an ATR rating, or get a job as a pilot. So using the theory of not excluding a group, then we must allowed paralyzed men and women to fly airliners? Out of that group of people, we may find a 'few' that could overcome the obstacles, maybe using special control devices. Yet, finding a way to accomodate those few would be prohibitively expensive, so, in a sense, we are "discriminating" against handicapped people. Still, people who have disabilities, or limiting factors in their lives, learn to accept these limitations, and go on with life. That is what the "gays" should do in this case--realize why such restrictions are in place, realize that the risks are too high not to do our best to keep even one abuser away from the kids, and find other adults of *like* (shudder) propensities instead of insisting on access to Scouts. But they are NOT going to do that. I still wonder why it is just SO important to allow "gays" to be Scout leaders. Yet, knowing that assaults HAVE occurred, organizations have been sued, STILL people want to open the doors to the kids to queer leaders. Come on, fellas, we KNOW why they want in. Organizations that have been sued by parents have put into place youth protection policies and background checks which ferreted out a surprising number of undesirables. Civil Air Patrol's Cadet Protection program is modeled on that of the Scouts--almost word for word. Adult members are required to be fingerprinted and submit to a full FBI background check. If there is ANYTHING to indicate homosexuality, child abuse, felonies, or other brushes with the law, that person doesn't get in. When these things began to be put in place, the fags and perverts screamed, "AAAAACK"! "NO FAIR"! "DISCRIMINATION"! "CIVIL RIGHTS"! Simple and plain: they want access to our "cute" little boys! And I say NEVER, NEVER, NEVER, NOT ONLY NO, BUT HELL NEVER!!!!!!!!!!

Unfortunately, there is no way to protect ALL every minute of the day. The never-ending (I'm afraid) slippery slope is the liberalism, the slacking and tearing down of morality, the things that were once considered wrong are now considered right (divorce, excess drinking, headlong pursuit of money, sex outside of marriage, and, of course, being queer). I often wish it were 1946 instead of 2001. All those things went on then, but it wasn't "approved" of. Now it's just BAU (business as usual.)

Interesting, but incorrect, to say the least. I haven't read the article, but I can't imagine what the author thought was going to replace code crunching. While the Internet certainly changed a lot in the everyday life and technology, that is nothing compared to what's coming when the fiber optics gets into our homes and replaces telephone wires and coax cable. All will be video and video will be all. In order to process that enormous amount of digital video, someone will have to write the code. Unless the author imagined that computers will write the code themselves, but this is more of an A.C.Clarke novel.

I don't think ham radio is going anywhere. We may witness a dramatic drop in numbers and activity when the older generations begin to die off, but I have a feeling the developing countries may keep it alive and well. Who knows - maybe there will be a huge pile up of BY and ZA ops trying to work a rare WA7 call.

Uh, CNN has a copy of the flight plan on their web site, obtained
from the flight service company in Iquitos it was filed with. Flight
plans are apparently required for all flights leaving from Iquitos,
so the air traffic control that cleared them would have known of
the flight plan. If CNN could find this, don't you think that the
people who were going to blast them out of the sky could have
been bothered to look as hard as CNN did?

I don't know about those reports you put so much faith in, either. The original report said the plane had been in both Brazil and Columbia prior to the shooting, but there doesn't seem to be any evidence that the plane ever landed anywhere outside Peru. The flight plan had the plane flying from the Amazon River at Iquitos in Peru, to the Rio Yavari, which is the border between Brazil and Peru, at Islandia, Peru. The purpose of the trip was to visit the Peruvian consulate in Benjamin Constant, Brazil, to get a visa for the 7-month-old girl who was shot. The plane flew them to the border, which they crossed on land. The only confusion was that the flight plan was amended with the tower in Iquitos when they left to include an othernight stay in Islandia, rather than a same-day round trip (the flight service company also has a copy of the letter requesting this).

> As for the radio messages, the law enforcement personnel involved
>claim the pilot didn't respond to challenges. Now, that could mean
>that the law enforcement personnel are wrong, or it could mean that
>the pilot didn't respond (still a possibility), or it could mean that
>the pilot was transmitting on a wrong frequency. Whatever the case,
>the parts of the tape I heard didn't contain any attempt by the pilot
>to ID his aircraft - only an unidentified person yelling that they
>were shooting at them.

The recording you are hearing was made by air traffic control at Iquitos with whom the plane was in routine contact with, having been handed off through air traffic control in Columbia (the plane was flying along the Amazon, which is the border between Peru and Columbia for at least some of the flight). Air traffic control in Iquitos report that they were in contact with the plane, and knew who it was. The plane was transmitting on precisely the frequency it was supposed to be or the air traffic center that was controlling the plane wouldn't have had a recording. Neither Iquitos nor Columbian air traffic control reported ever hearing a challenge to the plane on their frequencies, so there is a lot of independent evidence that the pilot was listening to his radio on the frequency he was supposed to be on, and no evidence that he was ever challenged on that frequency.

> I'd like to add one more thing at this point - we still have to
>consider the possibility that this plane was indeed transporting
>drugs. Until the investigation is over, which I assume will include
>attempts to locate the plane, we do not know the whole facts
>surrounding this incident and should not jump to conclusions until we do.

Of course we will have to consider the possibility that you are the drug dealer they were smuggling for too, since while the reports we've had didn't mention anyone who thought that either the missionaries or you were smuggling drugs, that is a negative which is still hard to preclude with certainty. Even if they don't have drugs with them they could have dropped them into the river earlier. But let's consider what independent evidence we do have. The plane was on a route that was consistent with a previously filed flight plan. It was flying at 4,000 feet in broad daylight above the Amazon river, which is exactly where you would expect any float plane following that flight plan to be. It was in contact with air traffic control along the entire route, the air traffic control involved confirms this. The pilot was a missionary who'd been in Peru for 18 years, the passengers were a missionary family with two young children who had a verifiable legitimate purpose for making the trip. It is still possible that they were transporting drugs for you, but it is hard to see how anything they did would make this conclusion so certain that they deserved to be shot down out of the sky and the survivors strafed in the river after the emergency landing.

And in fact all of the above is from reports from the same media you heard your report from, just discovered after the official government version you seem to be relying on. That first report also said the monitoring plane was staffed by "CIA contractors", implying at least a certain arms-length relationship to the government, when in fact the "contractor" turned out to be the US DoD which owned and operated the plane and which is even on record (via FOIA) as being uncomfortable in the role because of the possibility of shooting innocent people. And, of course, only news about Americans makes American news, so we have no idea how many innocent Peruvians, Columbians and Brazilians died this way. Except we do know that the program was suspended for a time in 1997 until congress passed a law absolving the monitoring plane crew of any responsibility for accidents for which the Peruvians were held responsible, so it is a safe bet this wasn't the first such accident.

I've seen estimates that 35,000 people die drug-related deaths in the US every year. Of these the number who die from actual illegal drug use (who the laws were presumably designed to protect?) is about 6,000, with the remainder dying from violence often associated with the distribution, sale and purchase of drugs. And we can surmise that many of the latter deaths are a direct consequence of the laws against drugs since the country has been here before; violent crime in the US dropped by 63% in the year following the repeal of prohibition. I don't use those drugs, and hence couldn't personally care less whether they're legal or not, but I'm still at risk because of the violence. The drug laws are a cure that seem to be worse than the problem being cured. They don't help people who use drugs to stay out of harm's way, and they put people who don't use drugs in harm's way. Like the people in Peru.

Someone is deleting messages again. I see that you've replied to a message from Phil, but that message is missing now (or at least it isn't showing up on my server). So, instead, I'll quickly respond to your message with my response to Phil (or at lease the key point to his message).

> "Phil Kane" wrote...

The same way police officers have been enforcing other laws for years without technical measurements or technical knowledge, Phil. The city (county, or whatever) writes a law that defines what a violation is and the officer enforces that law. Now, I have a question for you - why would an officer have to have technical knowledge of radio to enforce a simple CB violation when that same officer does not have to be an expert on anything else to enforce the many other laws out there? If police officers have to be experts on everything relating to the laws they enforce, there could not possibly be any law enforcement in this country. Your suggestion that enforcement of the potential CB laws will somehow be entirely different than enforcement of other existing laws simply doesn't ring true.

Doesn't knowing how to deal with high voltage come under the heading of "safety"?

>For rules, regulations, operating, and safety.

I'll differ with that by reducing the requirement to just regulation.

The FCC's lawful task is to regulate US civil (non-government) radio. The FCC has determined that licensing of individuals of certain RF emitters along with tests of those individuals is in their task of civil radio regulation.

Test question content, while approved by the FCC, includes operation and safety. The only direct safety aspect is in the (relatively new) questions concerning regulation of RF fields that affect the human body. There is no other regulation concerning the safety of operators who expose themselves to lethal voltages or who fail to take precautions on antenna erection and thereby injure themselves. The test questions on health and safety other than RF exposure fall under the "good operating practices" general questioning group.

Much of the hard-line arguments in here revolve around the "academic" aspect of the license test itself as if it "proves" some form of "expertise" in radio..."proof" of "qualification" (credentialism) above and beyond others by "upgrading."

The FCC is not an academic body. It uses licensing and the tests for licenses as a means of regulation of US civil radio. Hard-line credentialists exaggerate the regulatory testing well beyond its intended purpose.

US amateur radio is an activity carried on without pecuniary interest, hence the name "amateur." It is a hobby which requires regulation due to the physics of radio waves. Amateur radio is not professional radio but so many hard-liners desperately want to be just like professionals in an amateur environment.

Ed:

It would be interesting to learn how many prospective Technicians actually read (note I didn't say "studied" or "learned") the 100-plus pages of explanatory material, as opposed to those who merely learned the right answers to the questions. I learned most of my electronics by building homebrew projects out of magazines (stuff like 6-transistor AM Broadcast radios, light dimmers, power supplies, motor speed controls, etc.) and a couple of dozen Heathkits -- including two HW-8's and an HW-101. These were mainly kits I built for other people -- including 100% of the ham gear! The only Heathkit I ever built for my own personal use was that great little "micro-matic" keyer with the capacitive "touch" paddles! I sold it to KA3T; wish I had it back! Rick - are you out there?

Anyway, I digress...

You're right, the study guides are bigger today than they were in the Jurassic era when you were first licensed. However, I am willing to bet that the average New Ham of today knows a lot less about the technical aspects of the hobby than you and your contemporaries did. Back then, your "Elmers" patiently showed you how to neutralize the finals in your transmitter, or sat with you when you checked into your first CW net. Today, "Elmers" are called on to read instruction manuals for brand new HT's so they can help their "students" figure out how to set the repeater offset and PL tones!

>It is certainly easier to design a tube amp than it is to design some of the
>modern VLSI ICs.

I was only making a point on what is available in current
production of vacuum tubes.

I will differ in your last sentence in that there is no comparison
between "a tube amp" and a "modern VLSI IC." Very Large
Scale Integrated (VLSI) devices do much more than what "a
tube amp" can do. A better comparison is between a tube amp
[amplifier, sic] and a bipolar or field-effect transistor.

On the other hand, the necessary manufacturing equipment and technology needed to make a transistor is far more complicated than for any vacuum tube. That same capital equipment investment permits true mass production of semiconductors, far more than was possible with vacuum tubes.

Long-timers familiar with tubes but not familiar with semiconductors will invariably try to compare semiconductors with tubes using tubes as a baseline. That is not a personal fault but it simply shows an inability to understand the circuit possibilities of semiconductors if not a lack of flexibility to accommodate circuitry not bound by tube architectural rules.

In article <9c55qt$h6f$0@208.206.142.94>, Dick Carroll <dixie@townsqr.com> writes:

> A great eulogy to HPM, but the last word is on page 15, citing the
> Old Man himself in QST September 1927:

<snip>

Eulogy? According to my 1978 ARRL Radio Amateur's Handbook, Hiram Percy Maxim was president of that organization from the start in 1914 to 1936. Unless Maxim's title was "president for life and beyond," he was still alive by 1936.

1936 is five years before the USA became directly involved in World War Two. 1936 is 65 years ago from today. Those born in 1936 are now eligible for retirement benefits.

I have no qualms on praising someone who started the ARRL. I do have quite a bit of a problem with those who long, yearn, or desperately desire a return to the past, complete with all the limitations of technology, the limitations of fewer HF bands of 65 years ago. The standards and practices of 1936 cannot be taken verbatim for the year 2001.

My father and my father in law were both born in the year 1900. That year was one year prior to Marconi's demonstration of the first radio transmission across the atlantic, three years prior to the first successful sustained heavier-than-air flight by the Wright brothers. Both lived to watch Armstrong and Aldrin set foot on the earth's moon over live television. What an exciting time for a single man's life experience!

Dick Carroll wants to return to the past for the "simpler" time of US amateur radio. He can do so less a number of conveniences and medical advances available to humans of today. He can do so using only ordinary, less-advanced vacuum tube technology of the 1930s, using radio equipment manufactured by National Radio or Hallicrafters. He will have to depend on OOK CW when using simpler equipment in order to work above the inherent higher noise level of receiver first-stage tubes. He will have to depend on CW for transmitting at any high power since so few in the 30s could afford the massive audio power amplifiers needed for AM of those times. There would be little or no VHF equipment possible for hams of the 30s (Yagi's parasitic-element beam antenna paper would not be available until after WW2) due to lack of tube technology and lack of theory of such "ultrashort" wavelengths.

Return to 1936 and a "simpler" life? Not for me. I've been privileged to live through most of a technological explosion of knowledge and physics involving electronics and radio. No way would I want to miss such an opportunity by going back to a "simpler" life in the 30s.

I've adapted and continue to adapt to the new, have learned and continue to learn, have appreciated and continue to appreciate the advances, developements, and some utterly new things in radio. I'm sorry that some in amateur radio cannot do any of those. Their loss. I love TODAY and can't wait until tomorrow!

So you made no effort to protect your children from accidental electrocution from your exposed ham gear, which you knew so little about that you too were exposed, even though you had passed a ham license test that authorized you to run high power?

> homosexuals. Why is that, Dick? Do you have some hidden agenda?

Why are you so dense between the ears, Cecil???? At no time did I ever intimate any such thing in any way. The original subject was Boy Scouts and homosexuals being banned from them. You introduced all sorts of oddball side subjects and then 'create' all sorts of attitudes in others which do not exist. Why is that?

No one ever suggested that hetero predator males should be given a pass, except you. Why is that?

In accordance with the enabling legislation a city passes an ordinance that no non-licensed operator may transmit outside the authorized 40 CB channels or with transmitter power exceeding 4 watts output. That's what the enabling Federal legislation is all about..

>Now, I have aquestion for you - why would an officer have to have technical
>knowledge of radio to enforce a simple CB violation when that same
>officer does not have to be an expert on anything else to enforce the
>many other laws out there?

An officer investigating any crime, say a robbery, still has to evaluate "what happened" in terms of the elements of the crime, i.e. did the perpetrator take property from the victim by force or fear (or whatever that state defines as the elemenst of the crime).

How can an officer enforce the radio law, i.e. determine if a transmitting station is in violation of that ordinance, without making technical measurements and evaluating the results of those measurements?

And to open another can of worms which has barely been touched on, how will that officer conclusively determine thzt the suspect is in fact theperson making the suspected transmissions? Will the officer be equipped with a very proprietary (and long out of production) FCC Model DR-27 fit-in-the-palm-of-the hand "snifter" (directional receiver) which can determine which of two antennas five feet apart (say on two adjacent buildings) the signal is coming from? And know how to use it and interpret what he finds?

As I said earlier, if the officer is going to enforce radio laws, he has to be qualified to understand what he is doing. And when those

measurements are made and evaluated, the qualifications of the
maker/evaluator bear directly on the credibility of those
measurments and conclusions. Any decent defense attorney will jump
on that first thing.

Must be their training.

'Bout 40 years ago I spent a couple Army years stationed in New Jersey within commuting distance of NYC. I was riding the local commuter bus into Port Authority Terminal going on leave one busy, congested Friday afternoon. The long line of busses exited the Holland Tunnel and continued to the first intersection where they turned right to go the last several blocks to the terminal. The traffic cop at the intersection was busily directing all the busses to make the right turn, but when my bus got there, he inexplicibly directed the driver to go straight ahead. Well, the driver didn't WANT to go straight ahead, he was on on final approach to the terminal, almost had it in sight, and he wasn't about to be shunted away, deep into the city, away from his destination, for no obvious reason. So he made the right turn same as all the other busses had, against the traffic cop's directions.

But Alas, we had to stop in a short distance due to traffic at a red light ahead. Of course the traffic cop was right there, rap! rap! rap! ing on the bus door. The driver opened it, and the stream of invective was immediate and at a high dB level. But - the light ahead turned green, the bus driver closed the door in the cop's face and away down the street we went. But - again, traffic stopped at a red light ahead halted us quickly. Again, Rap! Rap! Rap! on the door. Again, the driver opened it. This time instead of the jabbing finger on the hand accompanying the loud invective, the hand held a waving Service Revolver, the dB level was louder, if that was possible. And .....again, the traffic light ahead turned green, and damned if the driver didn't again close the door - but this time, he trapped the cop's hand and arm, gun and all, and literally dragged the cop down the street, with the arm, hand, waving revolver, all too visible to the stunned passengres - to yet another red light where we again stopped.

Where they came from I have no idea, but suddenly the bus was swarmed with blue uniforms. They pounced on the driver and dragged him away, leaving the bus with engine idling and loaded with passengers, sitting in the middle of the busy New York street.

By that time we were within a few blocks of Port Authority terminal, and I had another bus to catch, so I grabbed my bags and hiked the rest of the distance.

I later read in the paper that they charged the driver with a long list of offenses including assaulting an officer.

Whew.....

You would lose the bet, Larry. It is impossible to know less about the technical aspects of the hobby than I did when I got my Conditional license in 1952.

Yep, in my opinion it does. Other opinions may vary. But, to the best of my knowledge, it's not on the exams now so may be considered trivial. One wonders what the Q&A would be like. "One should not grab 2500 volts DC because: A. ..., B. ..., C. ..., D. ..."

I didn't have any exposed ham gear and I didn't run high power while I had kids, Dick. It is the responsibility of anyone who runs high power to deal with the associated problems. It is not the responsibility of the feds. You do-gooder liberals are always poking your noses into other people's business for the purpose of satisfying your personal power trips.

Please post some details about kids who have gotten hurt while messing
with their Dad's ham gear.

Larry,

Throw away ALL licensing requirements? Just what
in the history of the code/no code deabte has been
said by ANY ARRL member, Director, staffer that
even remotely could be viewed as supporting such
an extreme position?

Cheers,
Bill K2UNK

The point, Your Geezerness, is not what OTHERS have posted.

It's about you.

YOU frequently assail myself and others about what is and is not "proper" discussions in this NG, yet you frequently take liberties with what is "allowable".

If you walked the walk for the talk you talk, I'd take no issue with you on it. BUT...just like just about everything ELSE you post in here, there's what you SAY and there is what you DO.

The two are NOT the same.

As usual.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

>  Nonsense, Phil.  Police enforce laws all the time without technical
>knowledge of the technology surrounding the laws they're enforcing.
>Police have been enforcing scanner laws for years without technical
>knowledge of radio.

First, there are only a handful of states that even have scanner
laws.  Second, the enforcement of such a law is far less
technical because the radio is in plain sight during a
```

traffic stop. Third, in those states with scanner laws, the locals, prior to federal preemption rling, DID abuse hams with mobiles that had extended recieve capability.

>Likewise, they have just begun to enforce
>cellular laws, again without technical knowledge of radio.

I know of NO local enforcement enforcing cellular laws... unless you mean the outright prohibition of using a cellphone while driving. That, again, is an overt act that is not "technical" in terms of determination by a local.

>And local
>communities have enforced laws regarding antenna structures for years
>with little or no technical knowledge of radio.

That's because the issues and facts are NOT technical (as in radio technical), but rather they are solely a function of physical construction, dimensions, materials, etc. Enforcement of a zoning violation regarding an antenna simply requires visual appearances and need never involve any actual use of that antenna (or antenna structure) for recieving or transmitting.

> And the same with laws outside of radio - police routinely enforce
>laws without technical knowledge of the technology surrounding those
>laws. An officer does not have to know how a bank operates to know
>that a bank robbery has occurred. A game warden does not have to know
>about ecology to enforce gaming laws.

These are all totally "physical" evidence issues. None involve technical competence...although gaming laws can involve the very specific identification of species (e.g. shooting a protected animal vs one not protected).

>An officer does not have to
>know about vehicle design to write a citation for bad brakes.

Police issue tickets for failure to stop. How can they issue a ticket for faulty brakes unless there is a test of those brakes. 40+ years of driving and I have never met anyone that has been cited for "faulty brakes."
Bad example.

>And I
>could go on and on with examples almost indefinitely.

And none of these examples get into the issues that surround operating a CB (legal or otherwise) from the confines of someone's home. That is still something you won't address with any common sense (IMHO).

> The point is that it is absurd to suggest that an officer must have
>technical knowledge before he can enforce a law. As I have said
>before, all that is required of an officer is that he have enough

>studied by 'experts" after it is gathered from the scene, and that
>"expert" can be present in the courtroom to give testimony about that evidence.

And in the HR-2346 situation, you are (IMHO as well as that
of Phil Kane (sorry Phil, in another post I said Phil Karn))
wrong. Your comments and opinons so far fail to adequately
address just how the local LEO gets to first "gather any
evidence at all in situations involving private residences.

Cheers,
Bill K2UNK

Cecil, I said they were "engaging what they _THOUGHT_ was a aircraft transporting drugs, with no flight plan filed and no response to radio challenges." An investigation is under way and it may take some time before we know all the details. However, according to reports, either the flight plan didn't actually get filed (contrary to claims otherwise) or flight plan didn't get listed properly.

As for the radio messages, the law enforcement personnel involved claim the pilot didn't respond to challenges. Now, that could mean that the law enforcement personnel are wrong, or it could mean that the pilot didn't respond (still a possibility), or it could mean that the pilot was transmitting on a wrong frequency. Whatever the case, the parts of the tape I heard didn't contain any attempt by the pilot to ID his aircraft - only an unidentified person yelling that they were shooting at them.

I'd like to add one more thing at this point - we still have to consider the possibility that this plane was indeed transporting drugs. Until the investigation is over, which I assume will include attempts to locate the plane, we do not know the whole facts surrounding this incident and should not jump to conclusions until we do.

Interesting response. I don't want to get into a libertarian versus whatever discussion at this point (I've got too many discussions going on already), but I do intent to talk with you further about this in the future.

  Wow, the newsgroups must have been really acting up last night.
I've seen a lot of the same messages posted over and over last night,
which suggests users must have had a problem getting messages to send properly.

> I sure do agree about the Q&A stuff. Heck, let a computer generate the numbers on the spot for the various resistance, reactance, resonant frequency, and other stuff. No two exams the same. Sure, the safety questions, operating proceedure, and similar may be mutiple guess, but again - don't publish them.

I remember this issue has come up here before from time to time, and I agree with your point about the exact questions and answers not being published. While you don't want to make the exams at the "engineering" level, all Hams need to have a grasp of the basics however. Memorizing the answers, by highlighting them in a "study guide", then picking them out on the exam just does not do it. I am surprised by the fair number of Hams who don't feel "comfortable" without the means to memorize the exam questions. I feel as time goes by that more Hams are turning out to be "appliance operators" who can read the owners manual, but have little to no understanding of what goes on under the covers.

While real project construction many not be as common as it once was Hams should be encouraged to do at least some basic "paper" design work. I may not do much construction work for Ham Radio, I do plenty for work where I spend half my time in the lab, I do like to understand what make my equipment tick. In that light I get out the CAD software, calculator, and books to analyze something I'm interested in. I don't see where learning in Ham Radio should stop with the last page in the rigs owners manual.

Oh no, Larry didn't work, work, work and expend a large amount of effort
and energy in the learning process. He already knew most of the material.

That's cheating. Shame, shame!

At Intel, the most technically qualified hams were Advanced class.
Most of the Extras were engineer-wannabes.

And if we eliminate the heterosexuals, we have eliminated two thirds
right off the bat.

> Of course your figures are most probably wrong.

Check them out yourself. Records indicate that twice as many little
girls as little boys are molested.

Since I have daughters, I am sensitive to this issue. Why is most
of the energy focused on molested boys when there are twice as many
molested girls? Is it somehow OK for little girls to be molested?
Is molestation of little girls more "natural" thus more understandable
and acceptable?

Yeah, Right! The FCC licenses a new ham to use high power supplied by high voltage based on testing ol flawed and that he isn't required to know the characteristics of his own hardware, and they have no responsibility for it.

Why is testing needed at all?

So it's OK to send your kids out with the homosexual kind because
there's only half as many of them. I think we understand where you're
coming from.

Tell ya what Cecil.... You support me in keeping the homosexual predators away from my grandsons in the Boy Scouts and for darn sure I'll support whatever method you deem appropriate in kkeeping the heterosexual predators from your girls in their scouting activities.

But somehow your drift here is toward letting them all have at all kids in every instance. WHy is that?

If you don't submit to arrest for a seat belt violation
then you will be arrested for resisting arrest.

Vote Libertarian. We are against victimless crime laws.

Actually the no-code techs had only a slight impact in active amateurs. Most of them are never active.

For example, at MFJ Enterprises dozens of employees became no-code techs. Within a year, only ONE remained active.

Among the people I know, most of the no-code techs are wives of amateurs who got a license to avoid cellular phone charges, or couples who did the same. Now that cell rates have dropped, so have the antennas.

No-code numbers look good on paper, but I'm sure most of them are actually not active. We ran into that here in my county, when we tried to get people interested in Skywarn and emergency communication. Virtually all no-code techs who replied d said they were no longer interested.

73 Tom

So an innocent pilot flying over Western territory in peacetime
deserves to be shot down simply for making a human error? Everyone
makes human errors at one time or another so everyone should be
shot? I think I understand you, Dwight, and it frightens me.

By all means, kill everyone associated with drugs. That will certainly
eliminate the problem. Killing innocents in the process is merely

acceptable collateral damage.

Dick Carroll said:

>Yeah, Right! The FCC licenses a new ham to use high power supplied by
>high voltage based on testing ol flawed and that he isn't required to
>know the characteristics of his own hardware, and they have no
>responsibility for it.

HUMOR IMPAIRED INDUHVIDUALS HIT DELETE KEY NOW.

The world is methodically being dumbed down by government efforts to protect us from stupid people.

Stupid drivers don't recognize the dangers of speed, so they drive too fast and kill themselves. The government regulates speed, so now more stupid people survive.

Stupid pedestrians don't know enough to not step out into a busy street, so they get injured and killed trying to cross the street. The government makes laws giving them the right-of-way, so now more stupid people survive.

Stupid parents don't recognize the value of childhood innoculations. The government makes them vaccinate their children before entering school, so now more stupid people survive.

Stupid hams don't know enough to keep their fingers out of 3KV plate transformers, so they get fried in their own juice. Dick would have the government protect them, and more stupid people would survive.

In the ways of Mother Nature, stupidity was kept in check because stupid people generally didn't survive to breeding age, thus our species tended to get smarter over time.

But stupidity begets stupidity, so we are being overwhelmed by a tsunami of stupidity. The tsunami is triggered by the government protection of stupid people, which allows them to survive to reproduce.

<BSEG>

Hans

That is akin to grabbing a fan belt when the motor is running. I don't recall any Q&A on my driver's license exam about not grabbing a fan belt while the motor is running and not allowing children to grab it either.

Libertarians are against laws that try to protect people from themselves and laws for which there is no victim. Dick, like many liberals, advocate such laws to advance his personal agenda. He took lessons from Hillary Clinton.

In a sudden fit of awareness of his surroundings, Dwight Stewart blurted out:

> However, according to reports, either the flight plan didn't
> actually get filed (contrary to claims otherwise) or flight
> plan didn't get listed properly.

Last time I checked, "failure to file a flight plan" was not an offense punishable by death.

That's good to hear, Dick. Why did you wait so long to say it? I was
always suspicious of males around my girls. Have you heard about the
rash of statutory rapes by high school coaches? Is that no big deal
to you?

> But somehow your drift here is toward letting them all have at all kids
> in every instance. WHy is that?

You're wrong about that, Dick. I advocate being suspicious of everyone,
not just homosexuals. You, OTOH, seem to advocate suspicion only of
homosexuals. Why is that, Dick? Do you have some hidden agenda?

In a sudden fit of awareness of his surroundings, Dwight Stewart blurted out:

> Bill, I'm not going to get into great details here, but it is not as
>easy as you imagine. Locate a legal piece of CB radio equipment,
>locate the FCC info, and then tell me it would be so easy to make up a

>phony sticker.

With my flatbed scanner, some touchup with a graphics program, and sticky-back labels through my printer, I could produce them by the hundreds in the next ten minutes.   Wouldn't be adequate to fool an FCC instspector, but it sure would be more than enough to fool Deputy Barney Fife.

You got it backwards, Dick. It is not OK to send your kids out with
anyone without checking the person out. Your little girls are in
twice as much danger as your little boys, or don't you care?

Maybe in wartime, but certainly not in peacetime over a "friendly"
country. But you have to admit, Hans, if we kill off the human race
in the process of protecting it from drugs, the drug problem will
go away.

The current trend toward protect-you-from-yourself government (put you in cuffs for not wearing a seat belt, for example) will eventually get us to the point of a over-reaching catch-all law which says:

"Everything not specifically prohibited is mandatory.
Violation of this rule is punishable by summary execution."

I'm all for offing the dope peddlers, but there was no evidence (zilch, none, nada, zero) that this craft was carrying drugs. It engaged in no evasive maneuvers, it was in contact with it's destination airfield by radio, and even a superficial visual flyby would have revealed that it was occupied by a couple of children and their parents.

Pure and simple murder, but it will be brushed off as a "regrettable accident".

Although the ship's commander is ultimately responsible for what happens to his ship, there has been NO discussion (at last any that I've seen or heard) regarding the reason for having civilians onboard. I'm reasonably certain Cmdr Waddle did not invite them, but that he was ordered ("required"?) to take them for a ride. Who is responsible for THAT?

The policy for siteseeing excursions needs to be dumped. If it wasn't for that, they'd never been at sea. Give'em tours dockside, it's not Seaworld, it's the Navy dammit.

In my view, the skipper and some crewmembers of Greenville are guilty of manslaughter. Through carelessness, lack of diligent seamanship, and lacksidaisical internal communications, this ultramodern attack submarine failed to detect a 500-ton ship steaming in their oparea, and subsequently sank it with loss of 9 souls embarked. CDR Waddle got off way too easy, no matter how many crocodile tears he sheds on "60 Minutes".

"Jamming?!?" During the first Watts riots I was living at this same
residence and listening in each night with my old National NC-57.
Never heard any jamming. Where was that jamming?

Did you see the one that hit national TV where the South Carolina trooper dragged a woman out of her car screaming a cursing at her over a mere traffic stop? It was caught by his OWN camera.

I *think* that when an aircraft is challenged by hostile planes, it is recognizable internationally(?) that one can slow down, drop flaps, and landing gear (if any) to signify surrender????? Would this have been the correct thing to do by the pilot of the aircraft being challenged to prevent being shot down? Anybody got more details?

jimmy john says:

>Although the ship's commander is ultimately responsible for what happens to
>his ship, there has been NO discussion (at last any that I've seen or heard)
>regarding the reason for having civilians onboard.

Carrying civilians in warships, giving them rides in bombers or tanks, and other similar practices go back generations and are done for very good reasons.

Congressmen are embarked to impress them that the defense dollars are well spent, and to get them to vote favorably for new programs.

High school guidance counselors are taken to sea to see the high tech training available to their students.

Parents/spouses/children of sailors are embarked on "family cruises" to involve them in the environment where their family member works and to make them "part of the Navy team".

Media representatives (TV/newspaper reporters) are embarked to gain favorable press for the military, useful in recruiting campaigns, etc.

Entertainers are embarked on deployed units during the holiday season for morale purposes.

I could go on and on with good reasons why civilians may be embarked in warships.

None of those reasons, however, absolve the ships' captain and crew from the proper and vigilant exectution of their duties. Period.

Really, Jerry? If we bar the homosexuals and also the heterosexuals, I guess

that leaves only the bi-sexuals and trans-sexuals (who have not yet arrived at
their new gender-orientation) in charge of youth groups.

Kinda makes you say hmmmmmmmmmmmmmm!

As another noteworthy example, look at the statistics since code was reduced.

We gain ONLY 6600 new amateurs (1%) in the last year since the code was reduced. We UPGRADED 30% of the amateur population.

Clearly, there were no massive lines of people waiting to get in but hampered by testing. Just as clearly, we gave a "free upgrade" to somewhat less than 1/3 of the amateurs we already had.

Face it folks, the problem isn't testing or anything else. It is social. The cure isn't going to be giving something away that no one wants.

Is it a choice of remembering exactly what to do during a stressful
situation or death by being shot down? Whatever the pilot did or
didn't do, he's only a human civilian noncombatant and may be ignorant
of military aircraft protocol. The fault and blame lies squarely with
the drug policies of the United States and the support of an abjectly
evil agenda which is power, control, and the destruction of individual
rights. Today it's drugs, tomorrow it will be T-bone steaks and SUV's.

And how is said "expert" going to evaluate something that is
volatile, i.e. the frequency and power of operation at the time of
observation, without being "on scene"? No "on scene" determination
of improper operation, no probable cause for a seizure and/or
charge, let alone entry.

Dwight Stewart says:

> The crew did it's job well (even if not perfectly). The Captain did
> his job well (even if not perfectly).

No they did not do their job well.

The crew and the skipper *failed miserably* in this evolution, to the extent that another ship and 9 embarked souls are at the bottom of the Pacific.

The facts are that this crew and skipper, with the facilities of an ultra-modern attack submarine at their disposal, failed to recognize a 500-ton surface vessel steaming within easy acquisition of their active and passive sensors, including (but not limited to) the Mark-I Eyeball.

A number of people were obviously asleep at the switch, and *not* "doing their well" at all!

  That's what I was told by one of the techs at the LA City radio
  shop.....the jamming may have been local to 117th Street and Mona
  Blvd (my old territory just off Central Avenue...)

Absolve? No. Interfere? Yes.

The only way to impress civilians is to give them "live" rides? No.

These are machines of war with incredible power for destruction, not Disney attractions. If a ride is necessary, give it to one or two at a time when there is a REALLY good reason (although I can't imagine a reason that good), not a dozen or two random thrillseekers all at once.

 No way. There were several tests for each class of license. Dick Bash
had to spend a lot of time gathering to get a substantial portion of the
questions.

  Half of the time, when one failed a test and went
> for a retest, he or she was given the exact same test. "Closed" pool? I think
> not.

 Of course FCC kept the tests secret. You must be getting desperate for
material to use here.

> Even so, it is easier to learn the fundamental material, at least to the extent

> thousand Russian definitions and I will cede the point.

 Watch him, Steve, he's got this new mind twist that for some obscure
reason involves Russian definitions.....I guess those English
definitions from Cecil's IEEE dictionary have caused him mental stress.

I'm just throwing your tactics back at you, Dick. Surely you recognize
them.

> > You, OTOH, seem to advocate suspicion only of
> > homosexuals. Why is that, Dick? Do you have some hidden agenda?
>
> Why are you so dense between the ears, Cecil???? At no time did I ever
> intimate any such thing in any way.

So exactly how does it feel to be subjected to false innuendo? I'm
simply using your own techniques against you, Dick. Why is it OK for
you to accuse me of something I didn't say but not OK for me to do
the same thing to you?

> No one ever suggested that hetero predator males should be given a
> pass, except you. Why is that?

There you go subjecting me to a false innuendo again, Dick. Please
quote my posting where I said predator males should be given a pass.
If you cannot, you will have proven that you are just a liar.

You should try reading what I said, Dick, instead of pulling meanings
out of your posterior. What I have said is to check out and judge people
as individuals whether they be homosexual, heterosexual, or whatever.
Your best heterosexual drinking buddy may have his sights set on your
young daughter.

Well, now you have me confused. If homosexuals should be barred because
it might save a little boy from being molested, shouldn't heterosexuals
be barred because it might save a little girl from being molested? Don't
little girls matter as much as little boys?

Incorrect, Kevin. Libertarians believe that the use of force and the threat of force in human interactions should be illegal, i.e. when there is a real victim of a crime, e.g. an armed robbery. We believe that victimless crimes should be repealed. Victimless crimes are the path toward fascism.

Your seemingly don't-care attitude toward the possible molestation of
little girls is very troubling. How about keeping "even one abuser"
away from little girls?

Some of your colleagues have claimed to have all sorts of "rights" with respect to transmitting on the airwaves. Among them are people who had not "conformed to the requirements" they sought to change. That was the truth I saw in the comment.

If it wasn't at least many of them, there would be no market for the book. The question pools are downloadable for free.

>However, I am willing to bet that the average
>New Ham of today knows a lot less about the technical aspects of the hobby
>than you and your contemporaries did.

I gave this some thought a year or so ago when I was standing in front of a Tech class, teaching them about the E and H fields in the near-field of antennas. I don't think that my Novice test asked any questions about antennas at all.

> Today, "Elmers" are called on to read instruction manuals for brand new

> offset and PL tones!

I have fiddled with a few of these new radios, Larry; I am not sure I could easily set a non-standard offset on all of them, even with the manuals. The menus on these things can be several layers deep, with undocumented features.

It makes as much sense to claim that one can easily memorize 1000 Russian defininitions without understanding as it does to claim that one can easily memorize 1000 questions about Amateur Radio without understanding.

I can understand why you choose to call it a "mind twist" instead of doing to demonstrate that your claims are right, though. I would say "good try," but it really was pretty weak.

Yes, we are. Now, as to appearances, would you say that those on the NCI Board that you speculate are trying to reduce the requirements so they don't have to work to gain Amateur Priveleges have put more, or less, work into their work on the NCI Board than they would have put into learning the material to pass the current exams?

I think we can settle this one from the historical record. Dick, you have been a ham longer than I have; can you recall any instance where the child of a ham was electrocuted by touching the uncovered high voltage of a ham radio apparatus? This certainly would have been reported in one or more of the ham rags.

I can recall a post or two that I regret having made. I recall that I apologized for them.

I do recall that I have never resorted to the grammar-school phrase "go soak your head." In grammar school, that sort of conduct would generally get one standing in the corner for a while. I certainly would have disciplined my child if she had acted that way in a public situation.

Additionally, most, if not all, NCI BOD members already
have either an Extra or they have already passed even
the minimum 5wpm now in place.  Ending ALL code
testing doesn't benefit any of the current NCI BOD
members.

Not cynical at all. Practical is the situation.
Tell me you do it for the pure enjoyment and that's
fine. What ever floats your boat, but if enjoyment
is the only reason it doesn't then become an
expectation in the minds of the regulators.

>>Sorry, no sale. The NCTA have always used the need to "advance
>>the state of the art" -- presumably in digital communications technology,
>>as a primary reason to reduce or eliminate the Morse code testing
>>requirement…as if the two were, indeed, mutually exclusive.

>Incorrect.

Leonard H. Anderson is once again LYING. Lennie, YOU YOURSELF have argued that if the code test were completely dropped, all these scores of longing engineers would flood the Amateur Radio ranks and dramatically improve "the state of the art."

What I can't understand is why would these guys be waiting for the opportunity to do this for free, when they could make money at it in the course of thier employ?

>>The claim
>>had always been that the code test requirement was discouraging
>>brilliant, computer-literate young people who would magically transform
>>the landscape of amateur radio communications technology if only they
>>had the fetters of this time-honored mode removed from them.

>Incorrect and an attribution of the PCTAs, not the NCTAs. False.

Leonard H. Anderson is once again LYING. YOU YOURSELF have made these very assertions. These were some of the very first exchanges we had, Lennie.

You are such a lying idiot that you can't even keep your OWN lies straight.

>>They have claimed the Morse code, and it's testing requirement, to be
>>everything from "lame" to "ethnic cleansing" -- and insisted that those
>>who support continuance of the testing requirement were not in step
>>with the "inclusive" nature of this hobby, and, therefore, politically
>>incorrect.

>Factually and logically incorrect. NCI is advocating only the
>elimination of the morse code TEST.

Only correct as applied to NCI. The rest is completely and unalterably correct when applied to YOU, in as much as you are dead center in the "NCTA" camp and have USED such phraseology in many of the thouands of posts you ahve polluted this NG with. To assert otherwisewould only be ONE MORE nail in the "Lennie's Lies" coffin.

>>You would have to undo over a decade's worth of Fidonet/Usenet debate on this topic to >>convince me otherwise.

>This is not Fidonet. This is not a BBS net of any kind.

He did not mention ANY "BBS", and his comments vis-a-vis "Fidonet/Usenet" were correct. How would you claim otherwise?

>tRoll calls himself an "expert" without any fear. Not a problem.
>The problem is that no one else considers him an expert.

Pot/Kettle/Black.

>>The link between technical incompetence and Morse code skill is the
>>very foundation of every argument that has ever been made against the
>>pre-Restructuring status quo in code testing.

>Incorrect.

NOT "incorrect". YOU YOURSELF have claimed that a great number of persons, yourself included, persumably, have not become licensed because of thier intolerance to the concept of learning the Morse Code.

This is an archived fact.

>>This is the truth, the only truth, and the only reality.

>Delusion.

"Delussion"...?!?! Coming from YOU?

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

Perhaps not a practical statement, but no more "delusion(al) than anything YOU have posted!

>Morse code in its present form of aperiodic on-off signals
>representing English language alphanumeric and punctuation
>characters is approximately 157 years old. Given the highly
>untechnical nature of that, it is unlikely to see any "growth"
>in technology as applied to radio.

And dropping a line with a hook and some form of bait into water in order to coax a fish onto that hook is centuries old, but it still works.

>tRoll is advised to follow his own words

Pot/kettle/black...AGAIN!

>There is no longer any valid reason to keep a code test for amateur radio
>licensing.

The law, Lennie. The ITU says it's the law. The Congress of the United States has ratified the treaty, thereby MAKING it the law of the United States. The FCC has said, officially, that it will "revisit" the code testing issue when they are no longer bound by the treaty. FCC officials, including Riley, have said in publically made comments that they have every expectation that Morse Code testing will be dropped shortly after the treaty is ammended and ratified.

That, however, has not prevented or detered YOU from continuing to charge full-bore at windmills, now has it?

>Deny that if you will, but it IS the truth.

Double on you.

Geez-O-Mighty...Here we go with the "back when I was a whipper-snapper..." rant again.

>"Discomfort" is caused by trying to keep the past the same even
>though the technology and everything else has passed them by.

Only YOU are trying to keep anything "the same", Lennie. You continue to try (unsucessfully) to make people believe that anyone/everyone who disagrees with you that "they" are trying to maintain some archaic standards.

You are, of course, wrong, but you keep repeating it. And in order to offset the "Lie Oft Repeated" syndrome, it must be continually rebuked.

>Learn, grow, keep on advancing.
>Or complain about discomfort when trying to hold onto the past.

It must be VERY uncomfortable for YOU, Lennie, trying to perpetuate your jihad against "old tymee" Amateur Radio afficiondos as "trying to hold onto the past" when every indication in every forum is that you are wrong.

VERY uncomfortable.

>Give us one real reason to build their own radio?
>It sure can't be the economics, it sure can't be
>to get a better rig, ...

This is from the same fellow who thinks "8 feet above the roof" is an acceptable height limit for amateur antennas.

There are any number of "real reasons" (what is an un-real reason, BTW?) an amateur might want to build their own radio.

..maybe they want to experiment with a new DSP filtering scheme.
..maybe they'd like to try class D amplification.
..maybe they have a new idea for a "mainframe radio" architecture.
..maybe they were just bored on a cold Saturday afternoon and wanted something to do to warm their hands.
..maybe they took 97.1(b) seriously.
..maybe they wanted to revoke their membership in QCAO.

Are you typical of other NCI Directors, or are there some who understand the difference between Part 95 and Part 97 radio services.

Hans, K0HB

So, did you write to them and explain what's wrong with this picture? Or are you bitching here because it's easy?

In any case, the FCC doesn't have any reason to tell the states what to do unless the person is already licensed at the federal level.

The states are free to make laws governing roads and road vehicles all they want. How else can you explain California's separate environmental regulation for cars? And likewise, states can tell you what you may and may not transport in that car.

So this battle has already been divided up at the state level. The only place to win it is at the state level. Unfortunately, I don't live in that state. The day Maryland decides to do anything this stupid, they'll hear from me. Unfortunately, a resident of the State of Maryland has only so much pull in other state houses...

Sure is.

It is not the responsibility
> of the feds.

Right, their responsibility is to see that people the ylicense are basically qualified to fulfill the responsibilitied for which they are being licensed. Including the safety responsibilities. What is it about this that you can't understand?

You do-gooder liberals are always poking your noses into
> other people's business for the purpose of satisfying your personal
> power trips.
>

Ah, reverting again to your favorite theme, the whatchacallits- ad hominies.

> Please post some details about kids who have gotten hurt while messing
> with their Dad's ham gear.

Who said it has to be the kids? They're just one of the many REAL possibilities involved, the scope of which cannot be predicted. Hence the safety factor involved necesary in licensing. Understanding is necessary. Word associations made to match a group of words which the testee has not learned the meanings with questioins which he similarly has not learned the background material for do not teach concepts.

Texas doesn't (yet) have a scanner law. When and if we do,
I will certainly contact my representatives. Time was when
it was legal to collect and listen to any RF. IMO, that's
the way things should be. If someone doesn't want their
RF transmissions to be monitored, they should encrypt them.

What is it about the legal concept of an ordinary prudent man that
you do not understand? On the driver's license exam, nobody is tested
on whether to grab a hot radiator or not.

As usual, you present absolutely zero evidence to back up your claims.
Where did you get the idea that the world should revolve around your
personal whims?

>need to destroy him in order to continue their subversive activities.

I enjoy a cordial relationship with many current and former members of the ARRL
Board, current and former ARRL officers, and various League employees and other

ARRL volunteer leadership types.

My opinions on amateur radio matters often differ markedly from theirs, but so far none of them have tried to destroy me, members of my family, my pets, or my property or reputation.

I have noticed they sometimes seek me out, but rather than attempt to destroy me they solicit my opinion. They have not seemed threatened if that opinion is not the same as theirs.

I'd be very interested in hearing specific details where ARRL has destroyed another ham, and the details of the subversion which followed.

73, Hans, K0HB

PS: Maybe they are using microwaves or infrared energy against me, like someone is using against KH6UH?

April 17, 2001

Mr. Jerry P. Wine
98 281 Ualo Street
Honolulu, HI 96701-4644

RE: Warning Notice--Amateur License KH6UH

Dear Mr. Wine:

On March 22, 2001, we notified you that information before the Commission indicated that on March 12, 2001, you used the frequency 146.52 MHz, and the WH6CZB frequency of 148.80 MHz, for lengthy broadcasting, effectively preventing the use of those frequencies by other Amateurs.

In our letter we warned that if such operation were repeated, we would initiate enforcement action against your license. Pursuant to Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), we required you to respond to our letter within 20 days. Finally, we notified you that you would be expected to comply with any requests by the licensee or control operator of the WH6CZB repeater not to utilize the repeater system.

As near as we are able to determine from your responses dated March 27 and April 11, 2001, you stated that you hold several patents, are an inventor and that several acquaintances who saw a patent application of yours passed away unexpectedly. You stated that you considered such situation to be an emergency because you were being targeted with microwaves, infrared energy, or poisoned, and therefore you utilized the WH6CZB repeater.

Please be advised that the information in your reply does not justify or excuse your actions on the repeater. Concerns such as those are more appropriately the jurisdiction of local authorities. Future incidents such as those described above will lead to enforcement action against your license.

> really was pretty weak.

And I can understand why you refuse to acknowledge that which I figured
out after some time as a VE. The people who study the question pools

with only the intent of getting the license - and there are numerous of these people - don't memorize the questions and answers since that would be a very difficult and uninformed, and unnecessary, way to do it. They read the questions and the single correct answer until they can pick out the two as pairs on the test. There is absolutely no need to know what the content means, nor any need to memorize. It's called association. It works and it is used. Ignore and refuse to believe it as you prefer.

I do know that the setting in which one gets started means everything to the amount of learning the newcomer gets. If he attends a class where the intent is to teach, as opposed to a cram course where the tricks and memory associations are taught "the test is taught", then he comes away with a wholly different base of knowledge, which is to say he has one. Those who study the pools with the sole intent of getting the license wind up with little learned. So Elmering is crucial, and unfortunatly much more rare than once was the case. And one intent only on getting the license has little use for an Elmer anyway.

The point is, we hav not had easy licensing for all that long a time, of course, basically only for a year now. And that single example is only one of the many possibilities .

Yeah, I know- look at the record and you don't see all that much negative result of ham radio licensing haveing been easy at the introductory level. There was a good reason for the Novice tohave been limited to 75 then later 200 watts however. I can't imagine how it can be justified to turn unknowledgable people loose with highpowered radio gear when you can't legally drive around the block without your seatbelt on.

That's exactly how I passed my Novice and Conditional exams back before
you ever thought about getting a ham license. So what's your point?
It has always been possible to memorize the word associations. You act
as if you have discovered something new when the only problem is that
you wake up in a new world every morning.

This newsgroup bears very little resemblence to real live amateur radio
as practiced on the air, as we have all learned long ago. Or so I
thought.
If I ever encountered the sort of treatment on the air that I have here
there would be little attraction to ham radio. Here there is a wide
variety of
attitudes, many of which are flagrantly hateful toward the hobby as it
has long existed, and who clearly wish it no good, even lots of evil.
You seem insistant on holding me and other code supporters to one
standard while consistantly ignoring all the carap from the other side.
Why is that? Just to maintain some sort of "come on in folks, the hobby
is fine" regardless of their intent or what they bring?
I know from long experience that ham radio is not for everyone who is
mildly interested and there are many of them that ham radio is better
off without. We already have too many we'd be better off without. It
cannot be a pure numbers game without destroying it at it's source. That
is fact as I see it from a perspective of 45 yearsparticipation.

Hey, I was trying to get you to wake up! Headsoaking will do it every
time.

Again, Cecil, the original subject weas BOY Scouts and, while I DID mention girls and "kids", I was trying to stick with the subject of the thread. So far, we haven't heard too much about Lesbians and Girl Scouts. BUT we've heard lots about queers and Boy Scouts. I fully admit that I am not the best writer in the world. I said it wrong, OK? EX-CUUUUYUUSSE ME!

Dwight Stewart :

> I don't think the Captain of that submarine should have received any
> form of punishment at all.

I'm sure the opinion of a Division Communications Services Officer of the USCG Auxiliary in South Carolina is valuable in determining punishment for this collision and subsequent loss of a ship and 9 lives.

US Navy Admiral Tom Fargo, Commander in Chief of the Pacific Fleet also has some opinions on the matter, and the contrast from your expert opinion is striking.

�a serious departure from the high standards expected of officers in command.�

�This tragic accident could and should have been avoided by simply following Navy standards.�

"Waddle fostered an artificial sense of urgency in preparation for the drill, ensuring the failure of the ship�s watch team to work together and pass information about the surface contact.�

�Managing these contacts was well within the capability of any ship,�

73, Hans, K0HB

Stay away from Morse cat release version. It will only do Fansworth at 13 WPM. The beta version is very good.

Check out http://www.teklasoft.com/java/applets/morse/morse.htm

It has a very good java program that can be configured for Koch method.

Good luck.

Dick Carroll asked:

> If Bill Clinton had learned and practiced CW do you think he might have
> been a more moral person?

No.

Would you be a less moral person if you had not learned Morse code?

Did Pope Paul learn and practice CW? If not, how did he get to be so moral and upright?

Does George W. Bush know and practice CW? If not, will he ultimately also get a clandestine blow job in the oval office?

If I renounce my Morse code ability, will I get one? :-)

In that case, Dick, the driver was wrong to have shut the door on the officer's arm. He DID commit an assault, he DID resist arrest, etc. The SC trooper was, however, WAY out of line. I have forgotten the reason the lady was stopped, but I seem to remember the reason for his misplaced anger was that she didn't stop quickly enough to suit him. This does point out that officers *sometimes* get TOO wrapped up in their authority, and that was the point I was trying to make about officers' reactions to being told that you have a license and/or trying to explain the Federal law as it applies to you. It *could* happen that he might react by seizing your equipment, etc, and saying, "You can tell it to the judge".

I believe part of this authority thing comes from the way they are trained, i.e., like car salesmen, they are told to get control of the situation, do not allow the subject to undermine or question your authority, make certain subjects know *you* are in charge no matter what. Officers are under a great deal of stress, and constantly going into situations full of "unknowns", and it takes a toll. For example, I've seen films of cops who overly manhandled a subject right after a high speed chase because the adrenalin is pumping SO hard they just can't come down to *normal* that quickly, and because the subject ran, didn't stop for their lights, he defied their authority (how DARE him), and the adrenalin heightened their sense of anger. In a more calm situation, the same cop might not even raise his voice.

Then there are the RAMBO cops who strap on a gun and a badge, and the concept of public servant goes out the window. They feel like kings who rule over their subjects (Y'all gonna do whut AH say, boy), and they trip out on the idea that they are Gods to be obeyed regardless. Legends in their own minds, etc. That's the cop I don't want coming to my house and telling ME about radio laws.

But Jerry, you have missed the point entirely. Lesbians and the Girl
Scouts may not be the problem. The greatest threat to the Girl Scouts
is the perverted *HETEROSEXUAL* male. What do you propose to do about
them? Molestation of little girls by heterosexual males is twice as
big a problem as molestation of little boys by homosexual males.

It seems very cynical to me to be so imphatic on making a point of
debate that you would belittle one of the most fundamental fascinations
amateur radio holds for most of us.

That's the same straw man that Ed just tried to build.  If I had said
then you wouldn't have to ask me if I said that.  Just so ya know.

Well, to tell you the truth, the level of decorum bears a tremendous
resemblence to the 435 repeater.  Only difference here is nobody gets
jammed.

Certain peoples deeply held beliefs and heartfelt humanitarian concerns for the betterment of all mankind tend to sound a little whiney and contrived after a while. Sorry. I just calls 'em as I sees 'em. But rest easy. I'm quite sure I must be profoundly wrong about all this.

Please stop misquoting me, Jerry. I said that I, personally, have seen no evidence that made the existence of a God necessary. IMHO, the Elohim were not gods although they appeared god-like at the time they combined our genes with theirs about 250,000 years ago.

Hello,

Many of you are tired of the Steve-vs-Lennie rounds, as well you should
probably be. But if you have wondered what drives me to keep on his poisoned
heel, the answer can be found in his own words:

From: Avery Fine (averyfine@aol.com)

>>Amateur radio is supposed to be FUN. A hobby. An activity not
>>for profit in itself, carried out for enjoyment and entertainment of
>>the participant. According to many in here it has evolved to
>>something rather different.

No, it hasn't (evolved to something different than what the FCC charters it to be), and no, no one has stated that it has...but let him continue....

>>Some seem to use amateur radio as a KKK surrogate, donning
>>virtual white sheets (license class, rigid rule and tradition system)
>>and attempting to lynch all critics (denunciation, denigration of
>>those not accepting their belief system).

This is Leonard H. Anderson's opinion of Amatuer Radio and Amateur Radio operators. WE (yes, a majority... from what I have seen here) do NOT agree with him, ergo we MUST be members of some terroristic organization.

I know most of you take a "just ignore him" attitude, the problem is he WON'T go away. If he can't hang on to the tail of one of "us", he'll wait for the next unsuspecting person to come along and utter the right keywords and he will be off and running again.

I have no doubt that was exactly what he did with me. For a couple of weeks he was almost pleasant to talk to, but after I made it clear that I value Morse Code as an integral part of Amatuer Radio, I was a "Nazi", "thug", and "brown shirt".

I am none of those. I do not mind saying that if I lived any closer to His Putziness when those insinuations were first voiced, accusations like that would have earned him a rather nasty shiner and probably a deviated septum. Those are cold, callous and evil things to analogize ANYONE with unless there is some pretty good evidence to prove otherwise.

Luckily, a cooler mind prevails. The opportunity WAS mine, but it was allowed to pass without manifestation. Lucky Lennie, and lucky me (for avoiding the probable fine and brig time)

Such vileness is spoken with the sole intent of generating hatred and argument, and that's exactly what he got. One AMP (Andersonian Message Point) for Lennie.

If anyone in a professional enviroment acted or espoused the degree of singular hatred and bigotry that he has demonstrated against US (yes, again a majority) he would be facing civil rights violations cases from now until his demise.

Lennie, take a hint. YOU NEED HELP. The sheer volume of hatred you pour into this forum is evidence of your sole preocupation WITH your hatred and single minded mission to defile Amateurs everywhere.

Your frequent and LIBERAL use of analogy to the KKK and Nazi's only underscores your problem. Do you not see this? Are you REALLY oblivious to the foolheartiness of this "quest" of yours? It has long since passed from being a "desire" to see some regulatory change to allow you to avoid taking a test YOU deem "humilating" to your superior intellect.

(1) No one here (except you) believes that ANYONE in Amateur Radio WANTS Amateur Radio to be as it was in the 30's, 40's, ad nauseum. Do many lament a change in the mindset and VALUES of many? Of course. It's a generational

phenomena that EVERY generation goes through. Does anyone want to go back to crystal control and regen receivers of that era, though? I thik not!

(2) No one here (that I am aware of) is affiliated with the American Nazi Party, any of it's spin-offs or other self-proclaimed leftist organizations of that ilk. Likewise no one here is affiliated with the KKK or any other organization dedicated to the repression of ANYONE'S rights.

To assert to the contrary would be to again lie in a public forum unless you have some "evidence" of that memebership.

(3) The Amateur Radio SERVICE has gone through CONSTANT metamorphosis since it's inception, and there is NO hint of stopping now. Any suggestion of "stagnation" or failure to advance is foolish and NOT true.

(4) The Amateur Radio service DOES provide NECESSARY and VALUED >EMERGENCY< and OTHER important public service related communications, your attempts to assert that Amateur Radio is not a "public safety" service notwithstanding. It happens on a nearly daily basis. It's a FACT. Deal with it.

(5) Amateur Radio IS a radio SERVICE, and the people of the United States, as expressed via representation in the Congress of the United States, expect that if WE are going to occupy valuable electromagnetic spectrum, we WILL "pay" our way. As the recent assaults by Little LEO and other spectrum users have proven, "our" allocations are NOT above reconsideration for commercial applications.

By the way, at my current position I am aware of at least TWO projects being considered that will require the client to go to the FCC and seek permission to implement the project as it will DIRECTLY impact both the Amateur and broadcasting services. And we are only one small company. I do not believe that this is the only type project being considered that will impact us. Occupancy and USE of these bands is of vital importance. "Service" helps to meet that need.

Facts dispell almost all of Lennie's rants, yet he perseveres in his attempt to denigrate and defile Amatuer Radio, and he continues to feel that he and ONLY he is in any position to reasonably determine what it is we need "for (our) own good".

He knows nothing of the kind. He has NO insight as to the needs or future of Amateur Radio and as has laready been proven in just the last two years, there ahs been almost NO significant impact on Amateur Radio census due to Morse Code issues.

People who want to get an Amatuer license will do so, code or no code. And they DON'T need your insults, hatred or lying to make them do something YOU won't do yourself.

Join the Klan or Nazi party if YOU want to, Lennie, but STOP these assinine assertions of similarity between them and anyone who doesn't have the "clarity" to see your opinion as the guiding light, Lennie. You are neither enlightened, nor can you see the light of day, and YOUR day has passed. Back in 1953, I believe.

Steven J Robeson

This is the first public release of the Ham quiz software. I think this is the best amateur radio testing program going because it doesn't randomly give you questions. It remembers which questions you have problems with and those are the ones that are given most often. The end result is if you can pass this test after taken a dozen times or more, then you won't have any problem passing the real test.

License info:

This source is licensed under GNU Public Licenses and does come with source.

Let me know if have any problems.

I would also like to know what your test score was on both the program and on the real test.

thanks & 73

Kill file? Great idea! Hey, call down to the machine room and tell
them to empty the bit bucket, and FAST, before that baby overflows.

dit dit

>> Doesn't knowing how to deal with high voltage come under the heading of
>> "safety"?
>
>Yep, in my opinion it does.

Well, there you go.

>Other opinions may vary. But, to the best of
>my knowledge, it's not on the exams now so may be considered trivial.

Nonsense. The mere fact that something is or is not on the exams does not prove a thing. The exams are not perfect.

And the discussion is about what should be on the exams. We agree that safety is one subject that should be on the exams, and that proper handling of high voltage is a safety subject.

>One wonders what the Q&A would be like. "One should not grab 2500 volts
>DC because: A. ..., B. ..., C. ..., D. ..."

How about:

"Which of the following methods should be used to safely determine if an electrical circuit is energized?"

"At what voltage level do energized circuits represent a serious threat to human life?"

"Can a radio or electronic device that has been turned off still be a shock hazard?"

"Can a radio or electronic device that has been turned off and disconnected from all sources of electric current still be a shock hazard?"

There are lots more. I would not be surprised to find that many of these are already in the question pools.

And high voltage is not the only issue. While a 2400 volt 1 amp supply for a tube legal-limit amplifier poses one sort of threat, a 24 volt 100 amp supply for a solid-state legal-limit amplifier poses another, different threat.

The situation is not at all like "grabbing the fan belt of a running engine". In that case, the engine, pulleys and belt can be seen to be moving, they make noise, and the vibration can be felt without putting oneself in danger. Most energized electrical circuits don't do any of that - hence the danger.

Switch to Safety!

>
>   Me, Lennie.

Incorrect. A break-in attempt via AOL during a private chat with
my wife is definitely not "meeting someone in person."   :-)

I have not met any regular or irregular participant in this newsgroup
in person.

>And two others who are in here on an infrequent basis but
>also know you for the creep you are.

Incorrect again, with or without the "creep" pejorative.

>>Good luck on evading that one now...
>
>   I am not evading ANYTHING, least of all you.

Nursie is still obsessed...and evades an answer with
several falsehoods.

Nursie must live in some virtual reality of imagination as if
this was a role-playing game. This is not an RPG.

Judging solely by appearances, it would seem that the members
of the Board of No Code Interenational have already met those
qualifications by test.  See any database of call sign v. class.

If the code test were dropped tomorrow there would be no loss of
privileges of those already licensed.

>
>Yes.  Now if I could only find where I put that P-Spice vacuum tube
>library....

The SPICE program family will not design an amplifier for you, with
or without extra-cost Libraries.  That is true whether the "amp"
[amplifier] is vacuum tube or semiconductor based.  The SPICE
programs analyze an existing circuit in time and frequency
domains.

The ARRL no longer sells the ARRL Radio Designer program set.
It is built on the free-source-code SPICE core.

Where is this indicated in the publicly-available agendas for
the 2002 pre-WRC meeting, WRC-2003, ITU-R Study Groups,
or the FCC International Bureau?

>   Why don't you give that dead horse one more whelp, Lennie? I am sure

There are a number of "dead horses" already licensed.

>>Strange...I've not seen that in the professional radio-electronics

>   Geez-O-Mighty...Here we go with the "back when I was a

>whipper-snapper..." rant again.

1953 was 48 years ago and the place was a 36-transmitter site
for US Army radio station ADA in Tokyo, part of the long-haul
HF trans-Pacific military network. ADA didn't use OOK CW
48 years ago. The time element was to create a point that the
big users of HF gave up on CW a long time ago.

>>"Discomfort" is caused by trying to keep the past the same even

disagrees
>with you that "they" are trying to maintain some archaic standards.

The long-time PCTAs are trying to keep the past as it was.
That is evident by their postings in this newsgroup, by their
writings, not mine.

>   You are, of course, wrong, but you keep repeating it. And in order to
>offset the "Lie Oft Repeated" syndrome, it must be continually rebuked.

Nursie has not rebuked anything by stating lies of her own.

>   It must be VERY uncomfortable for YOU, Lennie, trying to perpetuate your
>jihad against "old tymee" Amateur Radio afficiondos as "trying to hold onto
>the past" when every indication in every forum is that you are wrong.

Nursie has simply stated a pejorative group. Nursie claims "lie"
when there are no lies, yet lies herself.

A "jihad" is approximate Arabic for a religious war, something
engaged in to promote certain religious beliefs. Removal of an
unneccessary test element for a federally-required license to
engage in a radio hobby does not involve religion.

There are some who are steadfast in their "beliefs" of "serving
their service" in certain ways and only those certain ways or
be called "unbelievers." They call removal of certain ways as
a "jihad." They are the fedayin. The rest of us are simply
advocating a government regulation change.

Some fedayin will never yield until the last "infidel" is gone.   :-)

>argued that if the code test were completely dropped, all these scores of
longing
>engineers would flood the Amateur Radio ranks and dramatically improve "the
>state of the art."

Incorrect. I have not used such a phrase. PCTAs have used
that phrase, incorrectly attributing it to NCTAs.

>>>The claim
>>>had always been that the code test requirement was discouraging
>>>brilliant, computer-literate young people who would magically transform
>>>the landscape of amateur radio communications technology if only they
>>>had the fetters of this time-honored mode removed from them.
>
>>Incorrect and an attribution of the PCTAs, not the NCTAs. False.
>
>   Leonard H. Anderson is once again LYING. YOU YOURSELF have made these
very assertions. These were some of the very first exchanges we had, Lennie.

Incorrect on all accounts.

>   You are such a lying idiot that you can't even keep your OWN lies
>straight.

Nursie resorts to pejoratives to attempt proving a point. No point
of nursie's has been proven other than an ability to write nasty.

>>Factually and logically incorrect. NCI is advocating only the
>>elimination of the morse code TEST.
>
>   Only correct as applied to NCI. The rest is completely and unalterably
>correct when applied to YOU, in as much as you are dead center in the "NCTA"
>camp and have USED such phraseology in many of the thouands of posts you >ahve
polluted this NG with.

I am not a member of No Code International. I agree with their
views. My viewpoint on code testing for an amateur radio
license remains as it was long before No Code International
was organized.

> To assert otherwisewould only be ONE MORE nail in the
>"Lennie's Lies" coffin.

Repetition of "lie" charges does not prove anything. Nursie
has no factual basis for that statement other than imagination..

>>This is not Fidonet. This is not a BBS net of any kind.
>
>   He did not mention ANY "BBS", and his comments vis-a-vis
>"Fidonet/Usenet" were correct. How would you claim otherwise?

Fidonet began as a network of Bulletin Board Systems (BBS),
well before Internet became public-access carrying Usenet
newsgroups with it.

>>>The link between technical incompetence and Morse code skill is the
>>>very foundation of every argument that has ever been made against the
>>>pre-Restructuring status quo in code testing.
>
>>Incorrect.
>
>   NOT "incorrect". YOU YOURSELF have claimed that a great number of
>persons, yourself included, persumably, have not become licensed because of
>thier intolerance to the concept of learning the Morse Code.

Incorrect again. I have claimed, publicly, that a morse code test should
not be a requirement for an amateur radio license test. That is not a
presumption. There is no "because of thier [sic] intolerance to the
concept of learning the Morse Code."

My advocacy of elimination of the morse code test is not based on
any "concept of learning" but rather as an unneccessary regulatory
requirment for the amateur radio license test.

>   This is an archived fact.

No such "archived fact" exists. It is impossible to prove a negative.

>   Perhaps not a practical statement, but no more "delusion(al) than
>anything YOU have posted!

Pejorative comment having no relevance.

>
>>Morse code in its present form of aperiodic on-off signals
>>representing English language alphanumeric and punctuation
>>characters is approximately 157 years old. Given the highly

>>in technology as applied to radio.
>
>   And dropping a line with a hook and some form of bait into water in
>order to coax a fish onto that hook is centuries old, but it still works.

Irrelevant. There is no direct or causal relationship between
fishing and morse code.

>>There is no longer any valid reason to keep a code test for amateur radio
>>licensing.
>
>   The law, Lennie. The ITU says it's the law.

No. The International Telecommunications Union is a UN body
wherein member nations agree to abide by decisions reached
by that body. The ITU cannot make laws.

>The Congress of the United
>States has ratified the treaty, thereby MAKING it the law of the United
>States.

Popular misconception. The Congress of the United States can
and does make laws for the states and territories of the USA but
any ITU standard by itself is not a law.

> The FCC has said, officially, that it will "revisit" the code testing issue
>when they are no longer bound by the treaty.

The FCC has stated only that the code test is not relevant to
their regulation of US amateur radio. In 1990 in the 90-43 R&O
establishing the Technician Class license, again in 1999 in the
99-412 R&O for "restructuring."

Test element 1 is still required for any General or Extra class
amateur radio license examination.

>FCC officials, including Riley,
>have said in publically made comments that they have every expectation that
>Morse Code testing will be dropped shortly after the treaty is ammended and
>ratified.

There is no separate treaty regarding morse code testing. There
is only S25.5 under the general heading of S25 setting ITU-R
standards for amateur radio.

Unless there is something added in the WRC agendas or in Study
Groups of the ITU or in the FCC International Bureau agendas since
last week, there is nothing to be found concerning any future action
regarding ITU-R S25.5.

>   That, however, has not prevented or detered YOU from continuing to
>charge full-bore at windmills, now has it?

Test element 1 is still part of the license examination for a General
or Extra class US amateur radio license.

Sheesh! Talk about having to explain the "joke"!

It's not code usage. No one is denying anyone the privelege of using morse to communicate. It's code *testing* that has everyone in an uproar in this newsgroup. Anything past what is required the treaty is nothing but a worthless hazing ritual for Ye Olde Farhtz who think that testees are learning a "valuable communications skill"

Not a problem, "Hans." Simply contact America On Line, ask to
speak to the person in charge and tell them to cancel the accounts
because you are irritated with newsgroup behavior by these two.
I'm sure they will listen and take appropriate action. After all, who
knows better than you what is good for amateur radio?

There...wasn't that easy?   :-)

P-Spice is used for computer aided design TESTING. And I don't need you
to lecture to me about tube amp design. You can find a couple of my
production designs in the Tube Amp Manual by Aspen Pitman - or so I've
been told.

That's exactly what the gurus are predicting. In fact it's already in
operation in early forms. The new Canadian robotic arm now on the
International Space Station writes it own control system code to a
limited extent.

>>Leonard H. Anderson is once again LYING. Lennie, YOU YOURSELF have
>>argued that if the code test were completely dropped, all these scores of
longing
>>engineers would flood the Amateur Radio ranks and dramatically improve "the
>>state of the art."

>Incorrect. I have not used such a phrase. PCTAs have used
>that phrase, incorrectly attributing it to NCTAs.

NOT "incorrect". From the very keyboard of "NoCwTest". You argued
extensively that you and your colleagues were "put off" by the code issue.

YOU insisted that the dropping of the code test was necessary to encourage
these folks to enter the Amateur Radio service.

>> Leonard H. Anderson is once again LYING. YOU YOURSELF have made these
>>very assertions. These were some of the very first exchanges we had, Lennie.

>Incorrect on all accounts.

NOT incorrect. Truth. I know you have lied to us so many times, Lennie,
that you can no longer remember what you DID write.

Better get Googling, because you need to read up on what YOU wrote.

>Nursie resorts to pejoratives to attempt proving a point.

No, Lennie, I don't have to result to "pejoratives" to prove anything. You
do it nicely for me.

You really DO need to sit down and go back and read what YOU have wrote

>I am not a member of No Code International.

I didn't say you were.

>Repetition of "lie" charges does not prove anything.

I do not seek to "prove" anything, nor do I need to. A trip through the
archives will validate anything I ahve had to say.

>>NOT "incorrect". YOU YOURSELF have claimed that a great number of
>>persons, yourself included, persumably, have not become licensed because of
>>thier intolerance to the concept of learning the Morse Code.

>Incorrect again. I have claimed, publicly, that a morse code test should
>not be a requirement for an amateur radio license test. That is not a
>presumption. There is no "because of thier [sic] intolerance to the
>concept of learning the Morse Code."

Again...anyone with the determination to determine who is not being factual here will find out, Lennie.

And you HAVE made such statements.

>My advocacy of elimination of the morse code test is not based on
>any "concept of learning" but rather as an unneccessary regulatory
>requirment for the amateur radio license test.

>Pejorative comment having no relevance.

Which would eliminate about 95% of your posts, Lennie.

>Irrelevant. There is no direct or causal relationship between
>fishing and morse code.

Archived Note: It's OK for Lennie to use analogies but not me.

>>The law, Lennie. The ITU says it's the law.

>No. The International Telecommunications Union is a UN body
>wherein member nations agree to abide by decisions reached
>by that body. The ITU cannot make laws.

And the ITU is the organ by which said treaty was enabled.

>>The Congress of the United
>>States has ratified the treaty, thereby MAKING it the law of the United
>>States.

>Popular misconception. The Congress of the United States can
>and does make laws for the states and territories of the USA but
>any ITU standard by itself is not a law.

Again...the treaty was ratified by the Congress of the United States. You may argue it all you want, Lennie. S25 and all it's paragraphs are US law.

>Test element 1 is still required for any General or Extra class
>amateur radio license examination.

As required by international treaty. You really are delving deeper into Putziness, Lennie.

>>FCC officials, including Riley,
>>have said in publically made comments that they have every expectation that
>>Morse Code testing will be dropped shortly after the treaty is ammended and
>>ratified.

>There is no separate treaty regarding morse code testing. There
>is only S25.5 under the general heading of S25 setting ITU-R

>standards for amateur radio.

Of which the US is signatory. What part of IT'S THE LAW do you not understand, your Geezerness?

>Test element 1 is still part of the license examination for a General
>or Extra class US amateur radio license.

Previous facts reiterated. Lennie's anti-windmill crusade duly noted.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

I think you have been around log enough to remember this one.  I believe
it was a SS weekend quite some years ago when the FCC decided it was a
good opportunity for some enforcement action against the "California
kilowatt" operators.  One instance was reported in QST where the guy was
cited not just for illegal power but unsafe engineering practices.
Why?  His amplifier was on the other side of his shack wall (presumably
to cut down on blower noise) in his garage.  Garage door open,
unshielded high voltage and kids playing in the driveway.  No, noone was
hurt but how close was it?

Analysis.

There exist CAE that do synthesis, exact part values for certain
configurations such as filters.

>And I don't need you
>to lecture to me about tube amp design.

Wasn't "lecturing" on production versions of tube amplifiers
for musical instrument applications. Not my field. Having
written some CAE for both analysis and synthesis and
having used ECAP, LECAP, and several SPICE family
versions, I have some familiarity with CAE.

>You can find a couple of my
>production designs in the Tube Amp Manual by Aspen Pitman - or so I've

"Tube Amp Manual" by Aspen Pitman, 1993, 4th Edition, is
available from Old Colony Sound for $29.95. 768 pages,
softbound. Looked it up in the paper catalog from Old Colony.

Good for you. :-)

I think I see what you are saying, but factually CW is still the most efficient form of exchanging information available to amateurs when conditions are marginal.

I certainly have no objection to people who never use CW not taking a fast CW test, but it is stupid to allow 5 WPM people access to high-speed CW segments. It actually causes problems.

No matter how we look at it, CW isn't the problem. It isn't a barrier, and hasn't been for a long time except to a very few lazy people. The problem is people aren't interested in radio.

The recent results of lowering speed to 5 WPM (along with the much more simple test we have had for the past ten years or whatever) clearly show very few (if any) people are attracted by the reduction in speed.

So it is really a useless issue....it's mostly people who want to get a "free upgrade" that are doing all the bitching. 1% increase in new amateurs and 30% increase in upgrades shows we are whipping a dead horse.

It's a social problem. People are lazy and want the best of everything for no effort or work. They won't fish for a living anyway, it's too much effort when we have welfare.

actually, it's not just opposition to CW but to any "legacy" modes (meaning any modes currently in use, I suppose). VHF/UHF voice FM is such a "legacy" mode.

There are also the put-downs of any sort of competitive/sporting radio
operating activity (contests, dxing, award-chasing, mountaintopping, etc).
"Electronic paintball wars" was one catchphrase.

> and of course those are "his" opinions
>and then wonders of wonders, the exact same "opinion" almost verbatim

If the group agrees, that's fine. But as soon as the issue under discussion
goes away from let's-end-mandatory-code-testing, the alleged single-issue group
is no longer following its charter.

Boy, I sure could go for a Pan-Galactic Gargle-Blaster right now. Just had to defend myself against the Ravenous Bugblatter Beast of Traal.

(The Ravenous Bugblatter Beast of Traal is perhaps the most voracious life form in the universe, and will attack and eat almost anything. The one effective defense against it is based on the fact that it is very stupid. The Ravenous Bugblatter Beast of Traal is so mind-numbingly stupid that if you cover your eyes (with, say, a towel) when it is attacking you, it will simply go away, because it thinks if you can't see it, then it can't see you.)

Can you provide any single example of anything as bad as your example that has
happened to hams who have been licensed or upgraded in the past year?

>Yeah, I know- look at the record and you don't see all that much
>negative result of ham radio licensing haveing been easy at the
>introductory level.

I guess not.

I can go to the archives in QST and find a few examples of hams tested prior to
one year ago who have suffered harm as serious as your example, though, Dick.
These examples range from tower accidents to electrocution.

Okay, we've covered all that (the skills necessary to gather information and evidence).

> How can an officer enforce the radio law,
> i.e. determine if a transmitting station is
> in violation of that ordinance, without
> making technical measurements and evaluating
> the results of those measurements?

We've covered this before (however, I do remember you think it is impossible). Anyway, what about a simple list of the most common illegal CB radio devices on the market? Cops use a "hot sheet" all the time to determine if a car may be stolen. That "hot sheet" gives them the authority to stop a suspected car, arrest the driver, and seize the car. If a "hot sheet" of stolen cars is legal (routinely stands up in court), why not a "hot sheet" of the most common illegal CB radio equipment? It certainly should not take a knowledgeable FCC employee more than a few hours to make up a list every few months that would cover about 95 percent of the illegal CB radio devices commonly used.

> And to open another can of worms which has
> barely been touched on, how will that officer
> conclusively determine thzt the suspect is in
> fact the person making the suspected
> transmissions? [snip]

I don't know, Phil. I suspect he won't have to "conclusively" determine where a signal is coming from. In most cases, it will be a simple matter of deduction - a neighbor complains, says the signal is coming from that house, the officer does see an antenna at that location, the officer knocks on the door, and asks to inspect the station.

> As I said earlier, if the officer is going

> will jump on that first thing.

Why are you so certain an attorney will even be involved? I suspect CB enforcement at the local level will be treated as a misdemeanor, with nothing more than a minor fine involved. And, like most other misdemeanor offenses (traffic offenses, minor citations, etc), few will ever make it to a courtroom. The FCC will probably continue to handle the more serious offenses (or complicates cases involving technical evaluation).

That could be because you can grab a hot radiator and suffer no
permanent damage, in fact it can be a learning experience. No such
assurances accrue to grabbing a HV terminal which gives no prior warning
eminations to the unknowledgable.

Cecil:
What ARE you having such a probem with here? You don't routinely permit
males to be in charge of little girls and their activities, and
screening those who are is mandatory.

What is it that so complex about all this? If you do whatever you can to protect kids of whatever sex by protecting them from predators to the maximjum extent possible, the liklihood of a problem decreases.

You wouldn't have made it as a rocket scientist.

 Hey, let us know what you think. That's the only piece I don't already
have that makes my mouth water...

 That's current ham radio
> technology and nobody is interested in going back to 1936 technology,
> Lenny.

 Right on. Somehow all the geekos can't visualize that all this
improvement helps CW just as well as the other modes. It's another
'don't want to'.

There's another less obvious analysis of the way the aftermath of this
incident was handled Hans. I've read a couple articles about it in
which legal experts stated that if Waddle had been court-martialed he
would have been found not quilty based on insufficient evidence wrt to
his own personal conduct to warrant his being found criminally
negligent.
>
 If he had been court-martialed and found innocent he would have been
reinstated as the CO of the boat involved or some other boat or put in
command of a desk somewhere and would be continuing his career with an
unblemished record.

> you are transporting drugs, you'll feel
> that shooting you is okay too?

Whoa, calm down, Dennis. I didn't say a "thought" justifies a thing, nor am I really trying to justify anything. I simply stated the facts as I heard them. By the way, a "thought" didn't justify it for the people who shot down the plane either - the justification was a plane flying a common drug route, a plane approaching a border, a flight plan that didn't show up, and the failure of a pilot to respond to several radio challenges.

> Uh, CNN has a copy of the flight plan on
> their web site, obtained from the flight

> CNN did?

Well, gee, could it be that CNN was not actively involved in a chase of a suspected aircraft when they did their search?

> I don't know about those reports you put

> is the border between Brazil and Peru, at
> Islandia, Peru. The purpose of the trip
> was to visit [snip]

What value is any of this to the discussion? According to reports, none of that information was available at the time of the incident, so it really doesn't matter. Again, according to the reports, no flight plan was found for the aircraft when it was requested. In addition, the plane was flying on a route commonly used to transport drugs, the pilot did not respond to radio challenges, and the plane was approaching a border. That is the only information that matters at this point, and it is that information that has to be verified before we will know the full truth.

> Of course we will have to consider the
> possibility that you are the drug dealer
> they were smuggling for too, since while
> the reports we've had didn't mention
> anyone who thought that either the
> missionaries or you were smuggling drugs,

> to preclude with certainty.

Boy, you really are taking this personally, aren't you? Again, I never said the plane was carrying drugs, only that this was one possibility that has to be considered until all the evidence is in. Until we know all the evidence, I'm not going to jump to any conclusion and start blaming anyone - the people on the plane, the people who shot them down, or anyone else. And, likewise, I'm not going to dismiss any reasonable possibility until a full investigation reveals all the facts.

> [snip] The drug laws are a cure that seem
> to be worse than the problem being cured.
> They don't help people who use drugs to stay
> out of harm's way, and they put people who
> don't use drugs in harm's way. Like the

> people in Peru.

Ah, now I see why you're so determined to jump to conclusions with this situation - its an opportunity to further your agenda to legalize drugs. Well, never mind then - you're too busy pointing a finger at the drug laws to wait for all the evidence to come in.

No conclusive determination of the origin of the signal, no case.
Anything less is sloppy evidence-gathering and guesswork, which is
a p-poor basis for any legal case.

>In most cases, it will be a
>simple matter of deduction - a neighbor complains, says the signal is
>coming from that house, the officer does see an antenna at that

Wide open to the "dude defense" -- "its not me, officer, it's some
dude elsewhere". No conclusive evidence that the alleged unlawful
nonconforming signals are coming from that station, no case. Period.

Dwight - analysis of enforcement cases for sufficiency before they
are brought is MY bag - I was the Commission's expert on such things
for years and taught it at the Academy and in OJT. It's sloppy
prosecutorial technique to issue a forfeiture or take a case into
court where the prosecution cannot conclusively prove every element
of the violation and overcome any foreseeable defense. That goes
for everything from spitting on the sidewalk to premediatated murder.

>>   As I said earlier, if the officer is going

Any operator who does not get legal advice and "go the distance" in
a situation such as this is a fool. I would love to take on some of
these cases if and when they arise.

>The FCC will probably continue to
>handle the more serious offenses (or complicates cases involving

```
>technical evaluation).

  Tell me the scenario of someone operating overpower and/or
  out-of-band that would not involve technical evaluation to
  conclusively prove the violation.

  A charge of "using non-type-accepted equipment" is the icing on the
  cake, not the cake itself.  No probative evidence that the station is
  operating "out of tolerance", no reasonable cause to make the
  inspection to determine if the equipment is type-accepted or not.

Well, I guess that settles it. Prevention doesn't always work, so why bother?

Looks like that to me. A big Q mark popped up when I first learned that it was a demo for a busload of civilian VIP's when it all went wrong. Talk about distractions, should never happen. But the late word is that they do not intend to discontinue these VIP demos. The commander in chief himself should nix this stuff.

In article <3ae8cece.831229@news2.dvol.com>, Brian Kelly, w3rv says...

> If he had been court-martialed and found innocent he would have been
>reinstated as the CO of the boat involved or some other boat or put in
>command of a desk somewhere and would be continuing his career with an
>unblemished record.

Hardly! Even if acquitted (no one is "found innocent") he would still have been "the guy who sunk that JA fishing boat". I spent most of my adult life in the community, and that guys career was ended either way. The legal beagles can blow smoke as they wish, but he never would have seen another promotion nor another command. The competition for four rings on your sleeve, and for any command (let alone a seagoing command) if far too intense to allow him any hope for either.

By the way, there was no "honorable option" for Waddle to take.
The decision regarding NJP vs. Court Martial is not made by the
alleged offender, but his superior (in this case CINCPACFLT).

Hans, the opinions expressed are solely my own (based on information heard through public news sources). They do not represent the views of the U.S. Coast Guard or Auxiliary, nor do they represent a statement of my position as a member or representative of either organization. This is further underlined by the fact that I did not attempt to identify any association with either organization when I made those statements.

Furthermore, I'm not a member of the Auxiliary in South Carolina. I'm a member in District 13 (Washington, Oregon, Idaho, Wyoming, and Montana). My Division is located on the Olympic Peninsula of Washington State, with activities extending throughout Puget Sound, the Strait of Juan de Fuca, and the coastal waters of the Pacific Ocean. I'm simply in South Carolina for an extended visit to deal with personal family matters.

> US Navy Admiral Tom Fargo, Commander in

> from your expert opinion is striking.

Oh, I'm sure Admiral Fargo does have a different opinion. If I were in his shoes, I probably would be forced to express a different opinion also. However, when writing as a private individual, I don't have to consider public opinion when offering my views on the matter.

> "Waddle fostered an artificial sense of

> ensuring the failure of the ship�s watch
> team to work together and pass information
> about the surface contact.�

Since the drill involved what would normally be considered an urgent procedure, it was not unreasonable for it to be done with a sense of urgency. Furthermore, the Captain of a submarine capable of carrying nuclear weapons should be able to expect his crew to conduct their duties effectively regardless of any sense of urgency (real or artificial).

It's not the size of the study guide that matters, it's the information
contained therein and how well the student must learn it in order to pass the
test.

I think most hams make an effort to actually learn the material, not just memorize the pools. Some just word-associate and memory-trick their way through, of course, but that's nothing new at all.

I had an experience recently where a prospective Extra on another NG could not understand the Thevenin equivalent problem, even after reading the explanation in several study guides. He knew he could just memorize the answers to the 10 questions in the pool, but he did NOT want to do that - he wanted to learn! So I gave him an explanation, and after a few go-rounds he got the idea. I learned a lot, too, because it's one thing to know how to solve a certain type of problem and quite another to teach someone else how to do it.

> I learned most of my electronics by building homebrew projects

>-
>are you out there?
>
>Anyway, I digress...

I learned my fundamentals by designing and building ham rigs from "recycled" parts back in the mid-60s. My "study guides" ran to several hundred pages - they were the Handbook, Understanding Amateur Radio, and other books.

>
>You're right, the study guides are bigger today than they were in the
>Jurassic
>era when you were first licensed. However, I am willing to bet that the
>average
>New Ham of today knows a lot less about the technical aspects of the hobby
>than you and your contemporaries did.

The range of technical knowledge back then was wide. Some hams were very knowledgeable while others were clueless. Like the guy who brought home a new XXX receiver, hooked it up and learned to use it (sort of), then plugged a mike into the PHONES jack, flipped the SEND-RECEIVE switch to SEND and started calling other hams. He complained to the manufacturer that the set was no good because he did not work anyone.

Then as now, some built from scratch while others bought their stuff. And everything in between. And the guy who was an expert in one area might be a rank beginner in another area.

>Back then, your "Elmers" patiently
>showed you how to neutralize the finals in your transmitter, or sat with you
>when you checked into your first CW net.

NOT! I, for one, did not have that sort of help. My Elmers were books, but I had to read the books and figure out how the stuff in them applied to what I was doing. Of course the books were really good, so in effect I had Elmers with names like Grammer, DeMaw, McCoy, and Goodman.

By the way, the term "Elmer" did not exist until the '70s. It's one of the few ham radio terms whose exact source and origin can be pinpointed. THERE'S a question for the pools!

>Today, "Elmers" are called on to
>read instruction manuals for brand new HT's so they can help their "students"
>figure out how to set the repeater offset and PL tones!

Some things never change. The Old Man wrote of Final Authority, Young Squirt, Radical, and other characters whose counterparts are still around today.

What matters, though, is HOW the Elmer helps out.

--

Today we have more opportunities to Elmer than ever before. And there are more resources than ever before, 'specially with newsgroups, reflectors, and websites. Heck, there are over 500 (that's FIVE HUNDRED) technical articles online at the ARRL website alone! Many times all a new ham needs is a pointer to where the info is located.

Whatta crock.
>
Legalize the goddam stuff and treat it the same way we treat alcholic beverages. Legalization would wipe out the drug cartels right on down to the street-corner peddlers on the spot, would get rid of the gunfire and get the CIA and assorted militaries out of this mission-impossible circle-jerk. Taxation of the crap would produce enormous unending positive cash flows into to the public coffers just like legal booze sales do. Instead of bleeding the public coffers by the billions now spent on "enforcement".
>
Imagine how many "enforcers" would have to dredge up other ways to churn their daily bread if legalization came to pass . . which is the real story.

...And this introduces another problem if the "most used" illegal CB radio devices list includes those devices which are perfectly legal in another radio service.....   (e.g. Uniden HR 2510 - a local favorite in my area, which when unmodified, is a perfectly legal 10m amateur radio transceiver). With that, we return to the most common point of opposition to this law when it was still just a bill: Using the law as an excuse to harass other radio services.....

Perhaps you think the consequences of overheated radiators are universally harmless, but I disagree. A hot radiator hose can burst, causing permanent blindness if one happens to have a head inside the vehicle. Jumping a battery incorrectly can have similar consequences.

I guess the only positions you are capable of taking are extremes. Most people are capable of a wide range of feelings and beliefs. I expect that those are the views that will prevail.

>Texas doesn't (yet) have a scanner law. When and if we do,
>I will certainly contact my representatives.

By then it will probably be too late, Cecil.

> Time was when
>it was legal to collect and listen to any RF.

During WW1, not only were hams shut down from transmitting, but from receiving, too. Equipment had to be disconnected and sealed to prevent operation.

>IMO, that's

>the way things should be.

"The waves come upon us, whether we bid them or not". I see it as a question of property rights - if my RF reaches your property, and you can intercept it without preventing others from doing so, you should be able to listen to it. What you do with the information contained in it is another matter. .

>If someone doesn't want their
>RF transmissions to be monitored, they should encrypt them.

Agreed!!

The real problem is that many politicians are so technologically ignorant that they do not understand the most basic concepts. For example, the original analog cellphone systems are completely unencrypted, yet folks like Newt Gingrich had embarrassing conversations using them. Then the embarrassed Newt and other pols pushed through unenforceable laws in an effort to prevent a recurrence. They treated it like wiretapping, which is of course not the same thing at all.

Hans, I have said one can accomplish quite a bit
in that 8' of space. I would not want to live with
such restrictions myself, nor have I said that the
8' is acceptable...it may ust be that you have little
choice in dealing with the 8' if that's your situation.

Forget the seatbelt, as stated in another post a
day or so back, a new driver can buy ANY car they
want with no limitations as to power under the hood.

Cheers,

Bill K2UNK

Dwight...pay attention carefully...

Even assuming such an all enclusive list can be generated...
JUST HOW DOES THE COP GET TO SEE THE RADIO IN
A PERSON'S HOME. The cop has NO right of access.
You continue to ignore that vital step needed to look at
any radio in a person's home.

>>   And to open another can of worms which has

And as Phil Kane noted before...the cop has NO right to insect
any station at all. Indeed, the person could simply state:
"I have NO station of any kind."

>>   As I said earlier, if the officer is going

The rules of law, prosecution, etc still prevail.
Assuming someone is "charged", the person can always
enlist the help of an attorney. Indeed, I suspect that would
happen far more than you think.

Cheers,
Bill K2UNK

Where are those "high-speed" segments. I have never
seen anything in Part 97 that designates any band
segment as requiring a Minimum code speed during
any QSO.

Well, how about the learning experience of grabbing a fanbelt while
the motor is running? Get real, Dick. It is not your or my or the
feds responsibility to protect people from themselves. It has never
been the purpose of ham radio testing to protect hams from themselves.

>urgency.

Peacetime drills, first and foremost, require the strictest attention to safety
```

concerns, especially when the drill is conducted only for benefit of observers, and in waters in sight of land and known to be used by other shipping. The fact that Greenville shortcut safety procedures, and had a breakdown of team communications regarding the surface picture demonstrates that the skipper of Greenville had not properly prepared himself, his ship, nor his crew for this evolution.

>Furthermore, the Captain of a submarine capable of carrying
>nuclear weapons should be able to expect his crew to conduct their
>duties effectively regardless of any sense of urgency (real or artificial).

According to the findings of a Board of Inquiry, neither CDR Waddle nor his crew conducted their duties effectively in this drill. The responsibility for that lies directly on the Captain.

At sea, the power and authority of a Navy Captain is total and absolute. So is his responsibility and accountability for the safety and performance of his ship and crew. I'm surprised the same is not true in the Coast Guard.

By saying "high speed segments" I was alluding to the areas outside the novice and tech bands where 5 WPM testing gains access only to a specific CW segment.

I wanted to say that without referring to the novice or tech holders as "lower skilled CW ops" or as "novices", since that might have other implicatiuons than simply being a lower speed area operating area.

But if you prefer, in plainer language, the lower CW-skill areas (such as 7100-7150 on 40 meters) as a general rule used to contain all of the slow struggling CW work.

Now it has moved into other areas of the bands, and is causing problems. On a nightly basis, I am called by several people who obviously haven't a clue what I am sending, or who I am working. They call me on top of the people I am working, and are really having a struggle. In most cases, not matter how I send "QRL" or ".-...", they are lost! They simply don't understand I am working someone else. Some of them continue for a few transmissions before grasping it isn't them that I am working.

Not that I don't want to work them, or appreciate they are trying to work or learn CW, but having the band sorted out so less skilled CW ops are in one area was a lot better idea than letting people who only barely make 5WPM have access to the entire CW area.

I hope this is clearer, although I prefer to think of it as high-speed and low-speed areas instead of thinking of CW skill levels.

Maybe 10 or 20 years ago, but not today. For better or worse amateur radio is no longer the primary or secondary backup to normal means. For example high speed (200 kbits or faster) internet connection can be set up anywhere in North America in a few hours for less than $1000.00. Sat phones work anywhere in the world and will give point to point connections and they cost less than learning CW.

If you or anyone else thinks that at some point there will be a need for CW, you should think again. You are just wasting your time and skills. On the other hand if you enjoy CW and get a kick out making CW contacts then go for it. That is great. Just don't try to ram it down everyone else throat. They may not wish to spend their time learning CW, except for fun it has a very poor return on investment. If they don't enjoy it, it is a waste of time.

>I certainly have no objection to people who never use CW not taking a
>fast CW test, but it is stupid to allow 5 WPM people access to

It would seem like it is time for a new CW band plan. Since class of license no longer split the CW subband why not adopt a CW band plan to the different speeds of CW and for data.

>No matter how we look at it, CW isn't the problem. It isn't a barrier,
>and hasn't been for a long time except to a very few lazy people. The
>problem is people aren't interested in radio.

You know you are not winning any points by name calling. Just because
a person has choosen not to learn high speed CW doesn't make them
lazy.   I have known a lot of people who have elected either not
learn the code or learn the just enough to pass the test, who
are anything but lazy.

>So it is really a useless issue....it's mostly people who want to get
>a "free upgrade" that are doing all the bitching. 1% increase in new
>amateurs and 30% increase in upgrades shows we are whipping a dead
>horse.

The only thing the test is for is to make sure you know the rules
and you have a clue how not to kill yourself. It also serves to
reduce the number of low class CBer's types. There isn't any point
in testing skills anymore because there is so much to the hobby.
The amateur license is a license to learn by doing.

NCI Director Bill Sohl says:

>>>Give us one real reason to build their own radio?

I gave you a whole laundry list.

>>..maybe they want to experiment with a new DSP filtering scheme.
>>..maybe they'd like to try class D amplification.
>>..maybe they have a new idea for a "mainframe radio" architecture.
>>..maybe they were just bored on a cold Saturday afternoon and wanted something
>>to do to warm their hands.
>>..maybe they took 97.1(b) seriously.
>>..maybe they wanted to revoke their membership in QCAO.

Bill patronizingly responds:

>Are you saying you can only take 97.1(b) seriously
>if you homebrew?

No, I said nothing of the sort. You asked for reasons why someone might build their own radio. I gave you a list of possible reasons, never suggesting that they were the *only* reasons for anything. As any reasonable person (does that include you?) knows, 97.1(b) can include many activities besides homebrewing.

73's, Hans, K0HB

The scenario Cecil offered was a HOT radiator (normal for automobile operation) and not an overheated one, Ed. So that is the scenario I followed. I am aware of the hazards of an overheated one.

Jumping a battery
> incorrectly can have similar consequences.

You got it. Besides the possibility of fire or explosion, there are all sorts of gotchas out there.

At work we once had a training program proposed where untrained personnel were supposed to, on their own with no supervision, open up powered-up mobile radios and learn about them. Bad idea. The mere act of touching the wrong teminal with a hand which has a ring on a finger can cause an instant high-current short circuit that can have serious consequences, like causing the loss of a finger when the ing becomes a redhod heating element. I knew a guy in the service who had lost a ring finger in that way. A wristwatch is similiarly dangerous. And an unknowledgable individual mucking around inside a solid state radio can quickly cause terminal damage that he may never know he caused.

Dick

Valid and great point. As a community this should be loudly brought to
the attention of those that can make a difference. Remember, the
squeakiest wheel gets the most oil (as long as the wheel can still turn!).

 What I said. Of course, the medical code waiver headache was what
actually got it done. NCI just liked to take the credit.

Ah, right! Now the theme is "there are no high sped segments". Is this
a surprise? Don't think so. Next, "why have CW/Data segments" which we
see is already out there.

You don't seem to realize that you just said "safety is not a part of
it at all".

I doubt FCC will agree, at all.

Jim, I love it when someone cuts through all the whining about "it ain't like it used to be" and reminds us of an obvious fact, like you did above. The fact is we've never had more technical resources available to us as hams, and essentially free for the asking in many cases.

>If they don't enjoy it, it is a waste of time.

True enough. There is a big phone band for those people to enjoy. They
should be happy working phone, and not ask for extra class CW

frequencies.

But you are incorrect if t you think CW is not an efficient mode when
conditions are poor, power is limited, and you don't have a rack full
of other support gear to process signals.

>>I certainly have no objection to people who never use CW not taking a
>>fast CW test, but it is stupid to allow 5 WPM people access to
>>high-speed CW segments. It actually causes problems.
>
>It would seem like it is time for a new CW band plan. Since class
>of license no longer split the CW subband why not adopt a CW band
>plan to the different speeds of CW and for data.

Gosh, we had one. The FCC turned it over when they listened to Kenwood
and W5YI.

>>No matter how we look at it, CW isn't the problem. It isn't a barrier,
>>and hasn't been for a long time except to a very few lazy people. The
>>problem is people aren't interested in radio.
>
>You know you are not winning any points by name calling. Just because
>a person has choosen not to learn high speed CW doesn't make them
>lazy.   I have known a lot of people who have elected either not
>learn the code or learn the just enough to pass the test, who
>are anything but lazy.

OK, lazy or unmotivated.

My point is CW is not a barrier UNLESS the person chooses to NOT learn
CW. It is a barrier by choice of the person, not by the fact it is
there.

I don't ever plan on doing may things in life, and I still have to
learn things I think I don't need. That is MY choice, not a "barrier".
If I am too lazy or unmotivated to learn something, it's really my
problem. I quit whining about such stuff when I was a teenager, I quit
saying "that's unfair" because usually the whining takes more work
than the effort.

For example, when I was 16 I whined about having to pass a parallel
parking test to be able to get a driver's license. "Unfair", no one
parallel parks! Hey, now I think it is a good idea.

>>So it is really a useless issue....it's mostly people who want to get
>>a "free upgrade" that are doing all the bitching. 1% increase in new
>>amateurs and 30% increase in upgrades shows we are whipping a dead
>>horse.
>
>The only thing the test is for is to make sure you know the rules
>and you have a clue how not to kill yourself. It also serves to
>reduce the number of low class CBer's types. There isn't any point
>in testing skills anymore because there is so much to the hobby.

>The amateur license is a license to learn by doing.

No problem, that's why we need steps!!! We should have logical steps that encourage progress, and keep people from operating outside the limits of their experience or skills.

Why should a person who can't handle CW gain full CW access? Why should a person who can't understand SSB gain full SSB access? Why should a person who can't understand how to operate a station operate HF, where he has a dozen things he can screw up and bother other people with?

I'm not for or against CW testing, I just think the test should fit the end use. I think CW has become a scapegoat for people who are unwilling to admit as a society we are getting lazy and want everything for nothing, and as a socienty radio is boring. It is not cutting edge technology at all....so why pick on CW?? Why not ban AM radio?

The fact is we all like different things, and there is room for ALL of us. Let's just not turn the thing open like a free-band, which is how it is headed. That's the next step, now that 5WPM testing did not turn things around like all the whiners thought.

A small modem box is not "a rack full of other support gear". I can
establish reliable contact with Germany using 50 watts on PACTOR II
when 100 watt CW is virtually impossible because of fading. CW is
certainly one efficient way of exchanging information but, IMO, it
is not as efficient as PACTOR II.

For those of you who need warning signs like "Don't grab the fan belt when the motor is turning", here are additional ones you may wish to save for later use.

1. On a blanket from Taiwan - NOT TO BE USED AS PROTECTION FROM A TORNADO.

2. On a helmet mounted mirror used by US cyclists - REMEMBER, OBJECTS IN THE MIRROR ARE ACTUALLY BEHIND YOU.

3. On a Taiwanese shampoo - USE REPEATEDLY FOR SEVERE DAMAGE.

4. On the bottle-top of a (UK) flavoured milk drink AFTER OPENING, KEEP UPRIGHT.

5. On a New Zealand insect spray - THIS PRODUCT NOT TESTED ON ANIMALS.

6. In a US guide to setting up a new computer - TO AVOID CONDENSATION FORMING, ALLOW THE BOXES TO WARM UP TO ROOM TEMPERATURE BEFORE OPENING. (Sensible, but the instruction was INSIDE the box.)

7. On a Japanese product used to relieve painful haemorrhoids LIE DOWN ON BED AND INSERT POSCOOL SLOWLY UP TO THE PROJECTED PORTION LIKE A SWORD-GUARD INTO ANAL DUCT. WHILE INSERTING POSCOOL FOR APPROXIMATELY 5 MINUTES, KEEP QUIET.

8. In some countries, on the bottom of Coke bottles OPEN OTHER END.

9. On a packet of Sunmaid raisins - WHY NOT TRY TOSSING OVER YOUR FAVOURITE BREAKFAST CEREAL?

10. On a Sears hairdryer - DO NOT USE WHILE SLEEPING.

11. On a bag of Fritos - YOU COULD BE A WINNER! NO PURCHASE NECESSARY. DETAILS INSIDE.

12. On a bar of Dial soap - DIRECTIONS - USE LIKE REGULAR SOAP.

13. On Tesco's Tiramisu dessert (printed on bottom of the box)- DO NOT TURN UPSIDE DOWN.

14. On Marks & Spencer Bread Pudding - PRODUCT WILL BE HOT AFTER HEATING.

15. On a Korean kitchen knife - WARNING KEEP OUT OF CHILDREN.

16. On a string of Chinese-made Christmas lights - FOR INDOOR OR OUTDOOR USE ONLY.

17. On a Japanese food processor - NOT TO BE USED FOR THE OTHER USE.

18. On Sainsbury's peanuts - WARNING - CONTAINS NUTS.

19. On an American Airlines packet of nuts INSTRUCTIONS - OPEN PACKET, EAT NUTS.

20. On a Swedish chainsaw - DO NOT ATTEMPT TO STOP CHAIN WITH YOUR HANDS.

21. On a child's superman costume - WEARING OF THIS GARMENT DOES NOT ENABLE YOU TO FLY.

22. On some frozen dinners SERVING SUGGESTION DEFROST.

23. On a hotel provided shower cap in a box FITS ONE HEAD.

24. On packaging for a Rowenta iron DO NOT IRON CLOTHES ON BODY.

25. On Boot's "Children's" cough medicine DO NOT DRIVE CAR OR OPERATE MACHINERY.

26. On Nytol sleep aid WARNING MAY CAUSE DROWSINESS.

I was thinking more along the lines of Board meetings.  Other than write
letters to the FCC, I'm not exactly sure what NCI actually does for anybody.
I prefer the ARRL.  How about you?

Thanks, Hans.

>The fact is we've never had more technical resources
>available to us as hams, and essentially free for the asking in many
>cases.

Absolutley agree. And even when it's not free, the price is often far below
what it used to be.

For example, becoming an ARRL member gives you access to online "members only"
goodies like every QST Product Review since 1980. Those without the space or
patience to collect old QSTs,QEXs or NCJs can buy the CD-ROMs. Freeware and
inexpensive software for all sorts of ham radio activities abounds.

My favorite is N0HFF's excellent book on "The Art And Skill of
Radiotelegraphy". Just search on that call in Yahoo and there it is - free.

Of course Elmering is needed now as much as ever - perhaps moreso, to point
those in need in the right direction to find what they are looking for.

--

You wanna see Elmering in action, just read the Elecraft or glowbugs
reflectors. Really cool!

The correct answers are:

* d) * Put them on 14.313 as Brother John and MXL are so booooring on weekends.

* e) * At night put them up as co-hosts with corney-ell steve on 3.260 USB

> If the Liberty Net folks jam ongoing communications, they are rulebreakers. If they fail to ID as required, they are rule breakers. But as much as I disagree with some the things that some of them say , I also believe that our Constitution gives them the right to speak their minds. The biggest rules violation related to nets like the Liberty Net is not being done by the net participants, from my listen.

There's another possible angle to this. Has anyone considered It was likely the
radio practices by "fringe" ham radio nets that gave the impetus for
operations like the current 3.260 USB KSM clandestine station to start?
I often wonder if Reily H. can percieve the possible (?) link between the
fringe ham stuff and what has become America's first genuine
clandestine broadcaster on 3.260 USB ?

Off the wall? Non-sequitor? I wonder.

  Yep, both the 2950 and 2970.  And lets not forget the Uniden
HR-2510.  And then there are the "export" radios - the galaxy models,
the SuperStar models, and so forth.  And add in the most common
linears - the Texas Star models, and so forth.  It would be one heck
of a list.

In article <3AEA3E99.A4D87423@sccoast.net>, Dwight Stewart says...

>HR-2346 is completely unenforceable.  The attorneys at the FCC who
>helped to write HR-2346 were wrong.  The attorneys on capital hill who
>sponsored the bill were wrong.  The attorneys on capital hill who voted
>to pass the bill were wrong.  The attorneys who handed the bill to the
>president to sign were wrong.  All of that effort was a complete waste
>of time - the new law is absolutely unenforceable.

HR-2346 is just one of dozens of meaningless "feel good" bills that
gets passed each session so the congress-critters can go back to
Wisconsin (or where-ever) and say "look what I did for you".

I'll be surprised if it eventually leads to a single conviction.
Hell, I'll be surprised if it even leads to a single court case!

Maybe you would be willing to step up and
take his place so he wouldn't have to.

OR maybe offer to pay the room and board bill for
him the next oh say 50 to 70 years so he could
have life in prison.

We fully understand why you are forced to take that position, Dick, and ignore the reality of our experiences which incidentally, in my case, happened before you passed your first ham exam. You have painted yourself into a corner from which there is no escape that will save face for you - thus, the denials.

Which ones, Dick? In my younger days I tried most of the ones that
don't require a needle and never got hooked on anything except alcohol.

> And evidently Cecil would be happy.

Freedom for adults makes me happy, Dick. Your attitude toward legalizing
drugs and dropping the Morse code requirement are exactly the same - the
sky will fall! I simply don't see why treating marijuana like alcohol
would not be an improvement over the present situation where people
are sent to prison and their property seized just because they are
in possession of some God-given weed. The governor of New Mexico
agrees, along with lots of other rational people.

Not as bad as it could be because most new restructured ARRL Hams probably
don't own a key and wouldn't know how to hook it up if you gave them one.

I have stated repeatedly, and you have just as often ignored, that the entry level tests were never designed to be that difficult, and any half bright kid could learn enough about the material to understand it sufficiently to pass the tests. They were NOT based on exact previously-given Q&A, as you well know. The Advanced was tougher by a bunch, and the Extra was more involved and it would not have been possible to memorize your way through it in any concievable time frame, at least. Of course you wouldn't know about that, since you just recently took your Extra written, which you naturally made 100% on, having had all the exact questiona and their exact answers to memorize well in advance. So keep up the fiction if you wish, we all know the facts.

I'm at a bit confused here.

1. Why in the radio news group?
2. "Crucified"?
3. "Murdered by injection"?

The 100 + people "killed" by him were what? MURDERED! They didn't choose to be "put to sleep - permanently". They had no warning. No chance to say good bye. Why is it all the sudden we are supposed to feel sorry for the murderers? I don't get it. What about the VICTIMS? What about their rights?

I don't like to see anyone die either. Putting him to death will not bring the others back. But Death is the law of the land in most cases. He knew it before he planted the bomb. He rolled the dice and lost. Let him face the Angel of Death like all before him, especially at his hands.

I can't hold remorse for anyone who kills in cold blood. Self Defense is one thing, but this was not in self defense. As to his motive of what happened in Texas, two wrongs again, do not make a right. WE as a nation need to put a stop to all the violence if we don't want to see ANYONE else die in cold blood, be it by a murderer, law enforcement or other wise (i.e. Death Sentence). Death in this country anymore, is a game. It has to stop.
I don't know all the answers, if any, but it definitely has to stop.

One last point..... He had a chance to ask for Clemency. He refused. Now they are asking a President, who by the way, comes from a state that has had a lot of, if not the most Death Sentences carried out in recent history, to stop it. I doubt that even if he could stop it, he would.

If all who are begging for his life to be spared, were to have had a loved one killed, especially one of the children who did nothing to anyone, I doubt they would be begging for his life to be saved. They would most likely be begging for a chance to stick the injection in personally. If God wants him spared, he will be spared. Nothing will cut that short.

Now, can we get back to what this forum is supposed to be for.........
Radios.
Seems funny, all the forums anymore are being corrupted with everything BUT
their intended topic!

My "personal" opinion only........does not reflect the opinion of the ISP or
anyone else affiliated with the transfer of this message.

Yes, I'm aware of the findings of that board. However, I'm very uncomfortable with the idea of ending a career based on how many seconds a person looks through a periscope. I don't think a single submarine commander has ever thought to have a stop watch counting down the "recommended" seconds to look through a periscope. In other words, the punishment just does not fit the offense. In fact, I'm not totally convinced that an offense that justifies punishment actually occurred.

> At sea, the power and authority of a Navy
> Captain is total and absolute.

No, it isn't. There are literally hundreds of rules and regulations that control the actions and behavior of a ship's Captain (in almost every situation). Even under the most dire circumstances (actual combat), a Captain's every move is subject to review by his superiors.

> So is his responsibility and accountability
> for the safety and performance of his ship
> and crew.

Accountability does not equal punishment, Hans. Yes, a ship's Captain has a responsibility to see that his ship and crew perform properly. If he is not able to do that in a reasonable manner, than he should be removed from command (accountability). However, that does not suggest that a Captain should be punished for the mistakes of a crew member. Even accountability (removal from command) does not extend that far.

Modern naval vessels are extremely complex. Today, there is no way for a ship's Captain to even be aware of what is going on throughout a vessel, much less have total control. As I said earlier, at some point a Captain must be able to depend on his crew to perform their job correctly. This is especially true for a vessel as complex as the submarine involved in this incident. So, by all means, a captain should be held accountable for his actions, or for that affected by his actions, but no person should ever be punished for something outside his control.

> I'm surprised the same is not true in the Coast Guard.

Hans, I've already said the opinions expressed are my own. The Coast Guard is not involved in this discussion, so please leave them out of it. Thanks.

The illegal alcohol trade did not end with prohibition's end, Brian. Actually, if you check your history books, you'll see that the illegal alcohol trade actually increased in the years after prohibition came to an end. During prohibition, the illegal alcohol trade was limited mostly to the larger cities. However, in the years following the end of prohibition, the illegal stuff just got cheaper and trade spread into small towns throughout the country. In fact, the war on illegal alcohol did not reach its peak until the late 50's and early 60's, and it still exists to some extent today.

Likewise, and perhaps more important, the use of alcohol increased dramatically following the end of prohibition, and has continued to rise to this day. And, likewise, the negative effects of alcohol (alcoholism, DUI, etc) has risen steadily since the end of prohibition.

So, actually, we learned a lot from prohibition, and very few want to repeat those mistakes with drugs.

What part of "Thou shalt not kill" don't you understand?
>>>>>>

The part which you, and the usual group of liberal whiners from which you may exclude yourself if you wish, interpret as meaning that I and others, as a society, cannot protect ourselves from the perversity of mankind with requisite means, including capital punishment, when individual guilt has been established beyond reasonable doubt.

A few general remarks about 'crucifixion': it seems to me that McVeigh of late sounds not like Dismas, but like Gesmas.   McVeigh can be glad his passage from time into eternity will be effected not with having his body subjected to the unexpected and large-scale movement of the physical world surrounding him, or by the reality of Roman-style crucifixion (those goodfellas knew their biz), but by OD.   How poetically perverse.

Yeah, makes it a bit harder for those who feel a need to proclaim that Amateur Radio is dying if the numbers are actually going up, eh? Is the wail now going to be that Amateur Radio is dying because the number of hams is only going up a little?

>The point that I was trying to make is that CW doesn't really
>fit into the picture like it did once upon a time.

I think it has been decades since OOK CW has played a major role in emergency communications. Voice or digital modes have been the method of choice for a number of valid reasons.

It would be interesting to know if there are any specific examples of CW use in a time of actual emergency other than those cases where it was simply the mode of choice of the operator. Has there really been a time when SSB would not get through and only CW was able to get the message out of a disaster area?

Even if so, there are modes and techniques that can beat CW by quite a margin. If the purpose of CW testing really is to ensure that there is a mode that will get through when nothing else will, it would be even better yet to mandate that amateurs maintain digital capability using some of the modes that can communicate at levels tens of dB below the ambient noise level in a 500 Hz bandwidth. Of course, that isn't likely to happen, primarily because the FCC does not see the purpose of CW testing to be to ensure that the mode is available in times of emergency.

>>I think I see what you are saying, but factually CW is still the most
>>efficient form of exchanging information available to amateurs when

>>conditions are marginal.

>Technically flawed under technology available to radio amateurs
>as far back as a decade ago.

Only flawed in as much as he said "the" most efficient. In terms of throughput, it no longer is. In terms of simplicity and reliability, someoone will have to go a loooooog way to replace it.

>>> It's code *testing* that has everyone in an uproar in this
>>>newsgroup. Anything past what is required the treaty is nothing but
>>>a worthless hazing ritual for Ye Olde Farhtz who think that testees
>>>are learning a "valuable communications skill"

>That flawed claim is invalid for the retention of a code test for an
>amateur radio license.

Watch out, Lennie A...someone is trying to steal your steam.

>>No matter how we look at it, CW isn't the problem. It isn't a barrier,
>>and hasn't been for a long time except to a very few lazy people. The
>>problem is people aren't interested in radio.

>Sorry, there are people interested in radio. Most of those same
>people aren't interested in morse code communications...either
>by itself or as a license test requirement.

Sorry, Lennie...dumb logic. I didn't want to spend time on RTTY or "specialized modes" when studying for my licenses. Still had to do it. Got it done, got past it, moved on.

Now if we could only teach YOU that trick.

>>1% increase in new
>>amateurs and 30% increase in upgrades shows we are whipping a >>dead horse.

>The horse was probably dead from faulty data.

The data is directly from the folks who process and issue the licenses, Lennie. YOU are the one who always reminds us that the FCC, NOT the Amateur Radio community that issues licenses.

Are you now disputing THEM, too? YOU know more about the applications they process than they do?

>>It's a social problem. People are lazy and want the best of everything
>>for no effort or work.

>Oh, my, the posturing and preening on amateur radio morals
>and ethics!

If it were only NOT true. How ever this attitude prevails in ALL functions of life.

>Or have you merely baited a hook to go trolling for another
>chance at denigrating all those who did not buy into Your
>"necessary amateur radio morals and ethics?"

Here we go again...Lennie, "The Troller Supreme", lambasting someone ELSE over perceived trolling!

Lennie...WHAT A CARD!

>bright kid could learn enough about the material to understand it
>sufficiently to pass the tests.

The entry level tests now are harder than they were when I studied the 4-page Novice study guide for my entry-level exam.

>They were NOT based on exact previously-given Q&A, as you well know.

"Exact?" Not exactly. Close enough that I was able to "study" questions that were virtually identical to the exam the FCC gave me. Yes.

>The Advanced was tougher by a bunch, and the Extra was more involved
> and it would not have been possible to memorize your way through it in
> any concievable time frame, at least.

I believe you are correct. However, let's make sure that new hams understand that in context, Dick. Back in the days I took my General, that General gave me all amateur privleges for studying a 16-page study guide until I had it memorized. The Advanced and Extra were "vanity" licenses that conveyed no additional privleges other than the ability to pay for a 1X2 call sign, if memory serves. Most hams stopped at the General.

>So keep up the fiction if you wish, we all know the
>facts.

Yes, the facts are that hams in my era passed their General exams by a combination of studying, memorizing, guessing and just plain hoping a subject or two didn't appear on their exam. The facts are that the General that conveyed all amateur priveleges could be passed by studying a 16-page study guide until one had it memorized.

The fiction is that the hams of your era learned every single detail for their exams and the new hams of this era are memorizing over a thousand questions without understanding. I have little doubt that you actually believe that, but for the life of me, I can't imagine why.

>More and more of the on-line QST and QEX articles are marked
>"for members only" at the ARRL TIS site compared with a year
>before. [is that a "pointer" to join the League? :-)]

Yes, it is, Len.

I am the one who made the decisions about which articles should be members only and which articles should be public. Those that serve the goals of Amateur Radio as a whole are in the public domain -- RFI, safety, helping new hams get started. Those that help individual hams with their personal hamming are on the members-only site.

I am sure that those who choose not to receive QST magazine will understand that they do not have access to some of the articles that have been paid for by those that do choose to get it.

>Can you give us some exact numbers? How many of each kind were there a year
>ago, and how many of each kind are there now?

A year ago, none of the 500+ articles on the Tech Info part of the ARRL Web were members only. I believe about half of them are now available to ARRL members.

>Besides the Product Reviews, how many of the articles that would be of
>interest to a newcomer are in the members only area?

If I did it correctly in the TIS area, the articles that help a newcomer get started are public. I welcome feedback on my choices.

>the two as pairs on the test.

Did you learn this by talking to the applicants? Are we really to assume that your demeanor with them was so kindly that they opened up to you and confessed that they, to a soul, chose to enter ham radio and "recognize correct" answers to over a thousand questions because they didn't want to learn anything?

I offer that the majority of those who choose to enter ham radio do so because they want to learn what ham radio is about and enter something that will give them a lifetime of learning and experience. Just like nearly everyone here did, whenever they enter ham radio.

The premise that you offer that old time hams all wanted to learn and that new hams all don't want to learn is not believeable.

We all hope that we will pass without distress sat sleep in our homes. This coward sent tons of shrapnel through the bodies of toddlers for some perverse personal political agenda.

God can slap my hand later. If it were up to me, McVeigh would find himself awoken abruptly in the middle of the night, dargged naked to the courtyard of the prison and hanged in the presence of other anti-social ner-do-wells who NEED to see REAL death and REAL suffering.

McVeigh's legal termination may serve as "closure" to the survivors and other victims of his acts, but his death should also be a warning and example to others like him that our society will tolerate (and even encourage) dissent, but will NOT tolerate terrorism.

There is not any more new hams this year
then there was last year. The changes have
been class upgrades.

The solution to this key wiring deficiency is
to enact an international requirement for
a pass/fail exam requiring an applicant to
physically wire up a key. Generals would be
require to wire-up a two wire straight key, and Extras a
three-wire lambic key. Since this is a new requirement,
all hams would be required to pass the exam
with one year or lose their license.

Hello W6DHK: Yes good point, this could make a lot of money if produced
correctly.

They could also auction off the "Throw the Switch Job" on E-Bay, and
free closed circuit TV to the victims.

Then this brings up the possibility, of all the others on death row.....

Jay in the Great Mojave Desert, ... just down the road ah ways from the
fillin station.

What about the Yaesus, Kenwoods, and Icoms. Back in the mid 80's, Most of the
freebanders seemed to run Yaesus and Kenwoods with the FT-757GX (& GXII) and
the TS-140S being the most popular models. Now it seems the FT-840 and the
IC-760MKIIG seems to be the prevalent "high end" 11 meter "weapon of choice."
Shouldn't we include them on the list as well?

I know plenty of licensed amateurs who own Rangers and Lincolns (The latest
incarnation of the HR-2510) capable of 11 meter transmit. My question is are
licensed amateurs "exempt" from the list? What about an unlicensed person who

claims he's just SWLing until he gets his ticket? Can a ham legally own and use a Texas Star on 10 meters? Remember, these are just questions because I'm curious. No flames please. Thanks and g'day. (I'm in an Aussie mood today:-))

Not only was the way Dick did it superior, but it is now impossible for anyone else to do it the way he did it in the past so all new hams are automatically inferior to him with no hope of ever catching up and being his equal. There are at least three others on this newsgroup with that same delusion.

  Uh, Dwight, it's called "going through the motions" instead of getting
the job done. We see a lot of that these days, and even more of it here
on this NG.

In some cases, yes. In others, it became quite apparent through
extended conversations in which they had no knowledge of basic subject
matter which was clearly a part of actual study for their tests. Then,
of course some have stated categorically, even here, that was what they
did. But of course we can ignore all that, can't we?

Are we really to assume that
> your demeanor with them was so kindly that they opened up to you and confessed
> that they, to a soul, chose to enter ham radio and "recognize correct" answers
> to over a thousand questions because they didn't want to learn anything?

This little tidbit just illustrates how far off base you really are.

>
> I offer that the majority of those who choose to enter ham radio do so because
> they want to learn what ham radio is about and enter something that will give
> them a lifetime of learning and experience. Just like nearly everyone here
> did, whenever they enter ham radio.
>

I offer that your attitude is as outmoded as an NCI director sees Morse
code. Most who choose to enter ham radio do it to talk on the radio. Of
course some are already technically involved, and these people pose no
problem to the ARs, nor the testing to the m. But the official attitude
of "let's load it up with warm bodies at all costs" is dangerous and
destructive.

> The premise that you offer that old time hams all wanted to learn and that new
> hams all don't want to learn is not believeable.

Thanks for misstating amy premise, yet again. My premise is that for any license beyond entry level the applicant had little choice but to learn. Today that is not so.

Dick

All that is the predictable outcome of making it illegal in the first place. It took 30 years to recover from the abomination that was prohibition. Organized crime that was spawned during prohibition still plagues us today. Now we are repeating our past mistakes as far as drugs are concerned and organized crime is bigger than most governments. When will we ever learn? Legalization is an idea whose time has come. Legalize it and tax it. Turn it into a governmental cash cow instead of a governmental black hole.

The positive effects of alcohol have also been recognized. The latest study shows that two drinks a day is good for your health and is preventative of heart attacks and strokes. Everything in the world can be used either for good or evil, Dwight. Medicinal marijuana has some outstanding characteristics. If it wasn't a class 1 drug, it would be an effective prescription drug.

That's what I did in 1951 and 1952, Dick, yet you choose to ignore that.
You ignore everything that doesn't fit your agenda.

Bill:

I also abhor the idea of Timothy McVeigh being executed, in spite of his heinous act. I believe he should be forced to live out his life spending 23 hours a day in an 8x10 cell, reflecting on the misery he has inflicted on his victims and their families. In these days of social enlightenment and modern penal technology, there is no longer any need to impose death sentences on even the most barbaric of violent criminals. If "an eye for an eye" is in the Bible, then the Bible is wrong.

Cecil:

So you've said -- dozens of times. What I still want to know is: What
do *professional* engineering credentials have to do with one's status
as an *amateur* radio operator? Will you please devote a few paragraphs
of your logical reasoning to *that* issue? Show all of us why a person
who holds at least a B.S. EE and doesn't know the Morse code is
more qualified to be an Extra-class AMATEUR radio operator than
any other Extra *with* useful proficiency in this mode? In fact, leave
out the Morse code and just relate your professional engineer's
technical knowledge to the AMATEUR radio service in terms of
practical communications capability in ANY mode. I'm sure that
thousands of Extra-class hams who are doctors, lawyers, teachers,
bus drivers, airline pilots, sea captains, policemen, judges, janitors,
housewives, high-school kids, rock stars, TV and movie actors and
actresses, clergymen, nurses, and paramedics -- not to mention
thousands of other non-engineering professions -- want to know!

Hans:

To say this places you on the same low moral plane as Mr. McVeigh himself. I personally do not subscribe to the notion of "an eye for an eye." Capital punishment serves no purpose other than to satisfy an ancient urge for revenge which still poisons the psyche of modern man. We cannot claim to be civilized people until we can see our way clear to spare the lives of even the Tim McVeigh's of the world, in order to give them the time they need to adequately reflect on their evil deeds, accept responsibility for them, beg the forgiveness of their victims, and seek the salvation of their souls before their own deaths. In the meantime, their bodies can be warehoused economically and efficiently in stark, isolated quarters -- given the bare essential necessities of life, for a mere fraction of the cost of the expensive, publicly funded appeals and legal acrobatics needed to keep them alive on Death Row for decades after their convictions.

Capital Punishment is indeed cruel and unusual punishment in these enlightened times. I am in favor of total abolition of the death penalty.

Larry:

Interesting. I never realized that the purpose of the 13- and 20-WPM code tests was to "block competent missionary operators" from holding General-and-above amateur radio licenses. I would have assumed that truly "competent" hams, regardless of their profession, would have no problem with code testing at those speed levels, considering the fact that tens of thousands of hams from ALL walks of life have successfully met that standard in the past.

BTW -- when I was first licensed in the early '80's, and living in
Maryland while stationed at Andrews AFB, I had good friends who
were Extra-class hams, knew and used CW extensively, and were
missionaries in the Seventh Day Adventist church. I would use
them as my model for "competent" missionary hams. I'm sure they
would exceed your own standard by a considerable margin.

Dick:

I couldn't have said it better myself. What we're seeing here is the true nature of the NCTA. Like all liberals, they will stop at nothing to discredit their opposition, while using discreditable tactics in the process. The good thing is that among reasonable, logical, and truthful people, the liberal no-coders tend to cancel themselves out.

It is probably cases like McVeigh's that keep it around. Before it became so hideously expensive to execute anyone, it was cheaper to hang the criminal -- look at the long list of crimes that had capital punishment up to the 19th Century and the use of 'transportation' to keep the bloodbath at a gentle ladylike belch.

The problem with capital punishment in practice if not in theory, as Justice Blackmun finally decided for himself, is that it is applied far too often to the racial minorities, retarded, and poor of society (not asking it for O.J. to my mind makes virtually all California executions illegitimate) and not to WASP-types.

There is also the minor problem of getting the wrong man. I lived in Wisconsin for 18 years which executed the wrong man in 1852 and hasn't done it since. Given a judicial system which has no mechanism for investigating wrongful incarcerations and executions (in fact is designed to sweep them under the carpet) that doesn't come near the level of investigation of air crashes or train wrecks get, it does not seem reasonable or moral to trust the system to kill anyone. Several states have come to this conclusion.

Finally, executions are extremely corrosive to the prison staffs that have to carry them out. Nebraska, where I am living these days, puts Death Row in one slammer and does executions in the old bastille in Lincoln to keep this down to a minimum. At least the staff in Lincoln does not get to know the condemned. Lethal injection states often have a problem finding staff with the medical training who will do an execution. Personally, I always thought the US Army MP manual had the formula for doing a first-rate humane hanging.

Before it opened I had the chance to take the tour of the Columbia Correctional Center in Portage WI where Jeffery Dahmer was sent; even took a whiz in the very bathroom where an inmate hid to brain him. The place has 450 beds, 250 for those being rehabbed (?), 100 for lifers who are there to scoop mashed potatoes, and 100 for head-cases who have to be somewhere. In the area away from I-39 and behind the buildings is the coming, going, and discipline area; believe me it is not nice to make them mad at you. If you get the chance, take the tour. If this place rehabilitates anyone, he deserves a pardon some years later. Of more recent years we have this chain-gang mentality that keeps a kid who did something remarkably stupid at 19 from ever voting among other things again.

At the very least you will come away with the certainty that vast quantities of money are being spent to achieve a very half-vast result. Capital punishment is only part of the idiocy.

>frequencies.

I agree!

>But you are incorrect if t you think CW is not an efficient mode when
>conditions are poor, power is limited, and you don't have a rack full
>of other support gear to process signals.

Again it is a cool mode, but just a mode. It is efficient with a
skilled op.

>>It would seem like it is time for a new CW band plan. Since class
>>of license no longer split the CW subband why not adopt a CW band
>>plan to the different speeds of CW and for data.
>
>Gosh, we had one. The FCC turned it over when they listened to Kenwood
>and W5YI.

What does the FCC have to do with it? There is a lot in the ARRL band plan that isn't law. It is just a gentlemen agree that these freqs will be used for a given purpose. I think this is far better than having the FCC set the rules. They are away too slow in changing.

>OK, lazy or unmotivated.

Is there a differents? It is still name calling.

>I don't ever plan on doing many things in life, and I still have to
>learn things I think I don't need. That is MY choice, not a "barrier".
>If I am too lazy or unmotivated to learn something, it's really my
>problem.

Why is it a problem? It isn't a matter of being lazy, but priorities. We have a budget of X heartbeats, we must invest them wisely. For some learning CW is a good investment, for others it isn't.

>No problem, that's why we need steps!!! We should have logical steps
>that encourage progress, and keep people from operating outside the
>limits of their experience or skills.

I agree!

>Why should a person who can't handle CW gain full CW access? Why
>should a person who can't understand SSB gain full SSB access? Why
>should a person who can't understand how to operate a station operate
>HF, where he has a dozen things he can screw up and bother other
>people with?

They shouldn't.

>I'm not for or against CW testing, I just think the test should fit

>unwilling to admit as a society we are getting lazy and want
>everything for nothing, and as a socienty radio is boring. It is not
>cutting edge technology at all....so why pick on CW?? Why not ban AM
>radio?

I would like to see the CW requirement removed completely. I would also like to see the CW subband preserve as long as there is amateurs that are using it.

>The fact is we all like different things, and there is room for ALL of
>us. Let's just not turn the thing open like a free-band, which is how

>things around like all the whiners thought.

I think we are very much in agreement on this one. I don't see any signs of it going to freeband, but I am new enough that I may not

see the pattern. If it is going in that direction then we shouldn't
lose sight of the brass ring with unimportant issues like CW testing.

Any system that sends error correcting information and uses a narrow
bandwidth would be better, I agree with that. But there is nothing
worng with CW.

It is better than any other non-error correcting mode we have.

I have no agenda against any mode, or anyone else's pleasure. The fact
is that CW is not a problem with amateur radio, it is not the reason
there isn't more interest. It is a whipping-boy for those hell-bent on
changing amateur radio into an expanded personal radio sevice, and it
is in the way of Kenwood dishing out radios to anyone who wants one.

>I was thinking more along the lines of Board meetings.

All NCI business is conducted via email. We have very limited
funds and obviously can't afford to hold face-to-face meetings.
That factor alone makes for very limited "jawboning" and keeps
things very focused for us.

>Other than write
>letters to the FCC, I'm not exactly sure what NCI actually does for anybody.

Well we actually meet with the FCC too. Carl and I did
that last year as an ex parte. We both "funded" our respective
travel to DC ourselves.

>I prefer the ARRL. How about you?

I'm an ARRL member myself as well as NCI BOD member.

Cheers,
Bill K2UNK

Consider the difference in your two statements, Tom, from "most
efficient" to "better than any other non-error correcting mode".

No, he finds the one said to him to be more offensive. OTOH, I find the
one said to him to be less offensive (than the one said to me :-).

Let's ALL soak our heads!  (We should anyway, for continuing to
participate in this newsgroup.)  I'll be soakin' mine in Catalina this
weekend.

Happy Soaking.

Can we sue the ARRL?

Better question: Can we sue NCI?

Just kidding, guys. The reason we have that list of stupid label warnings and stupid instructions Hans posted is because we are already too litigous.

I think that NCI's views on code testing are closer to my own than ARRL's.

ARRL is the only organization I know of that consistently represents Amateur
Radio across a wide range of venues.

I am a current ARRL member; I am not a member of NCI.

Probably full and then some. Unless Bill stepped down, he serves as a State Government Liaison in ARRL's Field Organization (if memory serves).

If NCI is willing to send me 100 random call signs, I can answer that question.
:-)

I would guess about 60%.

The times I have taken "snapshots" of posters to RRAP, I have found 50-85% were current ARRL members. The times I have taken snapshots of posters to rra.equipment, I have found about 85% pretty consistently.

I had to post this here in view of earlier posts....

Learn how to save lives with CPR and the use of an Automatic External Defibrillator.

It can be done with no liability for the user and purchaser of a defibrillator.

Thousands of people succumb annually to Sudden Cardiac Arrest. Many of those people would be here today if a defibrillator and trained people were nearby.

Think of your workplace. Where do you spend most of your waking hours?

For the equivalent cost of a decent PC at market prices along with software, your organization can acquire a defibrillator, become properly trained and save the life of a fellow employee.

I wonder why our experiences are so different, Tom? I don't think that has happened to me more than once or twice in the past couple of years. I don't get on as much as I once did, but such faux pas do not occur very often when I do.

How about the other CW ops here; has this been a nightly occurrence when you operate?

>For better or worse amateur radio is no longer the primary or secondary backup to normal means.

Darryl,

From the record, it appears that in times of widespread disaster, those "primary" means of communication either fail altogether or are so overloaded as to be inaccessible. Amateur Radio has provided a valuable secondary resource in those cases.

73,
Ed Hare, W1RFI

>There is a lot in the ARRL band plan that isn't law. It is just a gentlemen agree that these freqs will be used for a given purpose. I think this is far better than having the FCC set the rules. They are away too slow in changing.

I agree that hams need flexibility, but, OTOH, give a listen to 160 meters and compare the activity vis a vis the band plan. See what happens if a "violator" is told he is operating outside the ARRL band plan. Those band plans will, and should, remain as recommendations; ARRL does not want to have regulatory power.

Well, when I think of Pactor and the rest I think of a computer and a big HF rig.

When I think of CW, I think of a key and a small radio and very low power drain...something you can tote around in the field.

I guess if you consider a laptop and a SSB rig readily available, then there are better modes (although they consume more energy).

>> That's current ham radio
>>> technology and nobody is interested in going back to 1936 technology,
>>> Lenny.

[apparently the FT-817 made it through FCC testing...:-)]

What about 1936 standards and practices? I just used technology
as a point of reference...most in here weren't alive yet in 1936.

>> Right on. Somehow all the geekos can't visualize that all this
>>improvement helps CW just as well as the other modes. It's another
>>'don't want to'.

The improvement in technology is worthwhile for all modes, but
that is still not a reason to retain OOK CW codings as a test
element or epitomize CW as amateur radio skills.

>The guy works a day or two as a week at the local HRO. That one store
>is selling 50 817s a month. Two a day! Gotta be one of the hottest
>items to hit the ham radio shelves ever. It's gettting scads of ops
>back into cw who haven't used cw for years, he's one of 'em.

Yaesu dropped the price of the FT-817 from $950 suggested list
down to $760. I should think that would be sufficient impetus to
have more amateurs visit their radio stores. :-)

I'm puzzled by the "scads of ops back into cw" as the "reason"
(implied) for the FT-817's success. It is all-mode (allocated) and
works all the way up to 70 cm (missing the 220 band) but is only
5 W maximum PEP. It is advertised as a "back-packer" sort of
portable. Do back-packing amateurs prefer CW over other modes?
And why?

The FT-817 won't fit into a shirt pocket but maybe a coat pocket.
Hopefull two pockets on the coat since the other pocket has to
hold the key and antenna wire. [it is 5.3"W x 1.5"H x 6.5"D]

Was this all-mode, "all-band," portability state of the art in 1956?
If so, or not, how did such technology affect standards and
practices of that time, a whole generation after Maxim's demise?

How is that applicable to 1966 standards and practices and the
alleged inability to govern the US ARS from Newington?

Technically flawed under technology available to radio amateurs
as far back as a decade ago.

That flawed claim is invalid for the retention of a code test for an
amateur radio license.

>I certainly have no objection to people who never use CW not taking a
>fast CW test, but it is stupid to allow 5 WPM people access to
>high-speed CW segments. It actually causes problems.
>
>No matter how we look at it, CW isn't the problem. It isn't a barrier,
>and hasn't been for a long time except to a very few lazy people. The

Sorry, there are people interested in radio. Most of those same

people aren't interested in morse code communications...either
by itself or as a license test requirement.

>The recent results of lowering speed to 5 WPM (along with the much
>more simple test we have had for the past ten years or whatever)
>clearly show very few (if any) people are attracted by the reduction
>in speed.

The no-code-test Technician license class has continued to grow
since it was authorized. That's a ten-year period. Prior to the
April 15, 2000, no-code-test Technicians were a quarter of all
licensed US radio amateurs.

>So it is really a useless issue....it's mostly people who want to get
>a "free upgrade" that are doing all the bitching.

Thank you for the "mostly" qualifier. :-)

In article <3ae9bbda.190572263@news.accessunited.com>, 2w8ji@akorn.net (Tom W8JI) writes:

>Any system that sends error correcting information and uses a narrow bandwidth would be better, I agree with that. But there is nothing worng with CW.

Faulty premise there of equating TEST with USE. Nobody is suggesting or implying elimination of CW USE in amateur radio. The NCTAs simply want to remove the code test.

Please cite the "necessities" of retaining the code TEST for all would-be radio amateurs. Concentrate on the test. Remember than the FCC licenses radio amateurs as part of a regulatory task. The license test is for the FCC's purpose and the FCC is not an academic institution.

The FCC is not chartered with any "moral and ethical" task of maintenance of some old, antiquated standards and practices or mythos about amateur radio.

>It is better than any other non-error correcting mode we have.

No. There is the faulty presumption that skilled code operators never (or hardly ever) make mistakes. The entire history of manual telegraphy is rife with mistakes happening in communications. That and the greater speed of teleprinting led the conversion of the commercial and military world to rely on teleprinters some while ago.

Morse code, even with very skilled operators running routinely at 40 WPM still take longer than slow voice by a factor of 3.

Morse code is not a mandatory mode for US radio amateurs except in two small VHF band segments, yet is the only mode skill ever required for any license class test.

Morse code has only one advantage that might possibly fit the regulatory task of the FCC. It permits communications, using a western alphabet set, between two amateurs who do not speak the same language. However, international communications' skill is not a requirement in Part 97 or 2.

>I have no agenda against any mode, or anyone else's pleasure. The fact
>is that CW is not a problem with amateur radio, it is not the reason
>there isn't more interest.

Are you the definite source of opinion expertise on why there isn't more interest? I don't think so. You have expressed your opinion. Nothing wrong with that. The fault is trying to denigrate "civilians" with morals, ethics, and motivation of your personal choosing.

It is easy to see why so many never bother with amateur radio as a hobby. That lies in a sometimes overbearing patrician and self-enobled opinion of their "expertise" in radio and the continuation of old, outdated standards and practices as the "goal of skill enhancement."

US amateur radio is a hobby. It is not some quasi-military "service." It is not some emergency "service." It does not need self-important torch-carriers and lawgivers to "enforce" traditions, standards, or practice beyond what is necessary for the FCC to regulate that radio service.

>It is a whipping-boy for those hell-bent on
>changing amateur radio into an expanded personal radio sevice, and it
>is in the way of Kenwood dishing out radios to anyone who wants one.

Is it? Or isn't it the "lack of motivation (for learning CW)" is the false and misleading phrasing of those who consider themselves elite and "leaders" of some virtual community?

Amateur radio is defined as an activity engaged in not for pecuniary compensation. That is why it is amateur. That is also a fancy phrasing for a hobby. An avocation.

It seems to be that hobbies ARE personal to the individuals
involved. The ITU-R standards define amateur communications
as having "trivial value." All of that adds up to a personal radio
communications service. Personal.

If you wish to state that "civilians" are too lazy and unmotivated
(to learn CW for a test) then I will have to ask who made you
the great moral arbiter of amateur radio?

Why is there a CW test and how is it justified?

Oh, and Yaesu is doing the current round of price reductions
in ready-built amateur radio equipment, not Kenwood.

>overloaded as to be inaccessible. Amateur Radio has provided a valuable
>secondary resource in those cases.

Ed,

Of course your are correct. I meant to add that I think ARES
and RACES is very important to help with local disaster, even
the wide spread such as hurricanes. It may also be true that
EM units may still be working with old tech when disaster strikes
and the amateurs must come to the rescue. The point I am trying
to make is that mobile sat based high speed digital comm can be

purchased for less than $1000-2000 now including computer.

What can't be replace (at least not yet ;-) is having a human
out in the field. I think this is where ARES and RACES really
shine and save lives! I for one am really glad that ARES and
RACES is there!

The point that I was trying to make is that CW doesn't really
fit into the picture like it did once upon a time.

HAH! Got ya beat! Advanced in 1968, at the age of 14. Extra in 1970, at the age of 16. (2-year wait back then). Now you gotta collect on that lobster-dinner bet, Ed.

Back then we had 12 year old Extras. A few years ago, we had at least two Extras under the age of 11. And some really young Techs.

In my Novice test of 1967, there was at least one safety question that dealt with the precautions around high voltage. I remember laughing because one of the choices was "take out double-indemnity life insurance". I had to go home and look up what double-indemnity meant.

Can you give us some exact numbers? How many of each kind were there a year ago, and how many of each kind are there now?

Besides the Product Reviews, how many of the articles that would be of interest to a newcomer are in the members only area?

W1RFI has explained the criteria for what gets put in the members only category and what is wide open. I think the criteria used makes a lot of sense.

Do you think the ARRL should simply put all of their copyrighted material online for free?

>[is that a "pointer" to join the League? :-)]

Joining the ARRL is about the best deal a radio amateur or would-be radio amateur can make. QST alone is worth the price.

Sure wish it was that simple, Brian. It ain't. Alcahol can affect different persons somewhat differently, but there is a wide variation in the effects of the different drugs. Some are instantly addictive, one time and you're hooked, your life taken over by the craving. Far more crime is driven by drugs that is generally recognized. Much of the stuff wipes out the ability to think rationally, nothing matters except getting the next hit. And there is a fairly wide variation in the way different people react to many drugs. Some can use some drugs "recreationally" while others cannot, falling to the instant addiction.
Some drugs can absolutely wipe out a normally functioning brain, causing the user to do things that are absolutely crazy, that he

wouldn't think of doing normally. An 18 year old kid here, normal by all accounts and a good kid, got a snoot full of Meth and went absolutely nuts, shooting a rifle into passing cars, houses, at people. It was sheer good fortune that no one was killed. He is now serving 40 years and wondering what happened.

I just saw on TV the other day where another Meth addict was in court for being a "hired gun" where a husband paid him to kill his wife. He needed money for more Meth. Today any fool with a few bucks for common supplies and a little time can make meth.

This is just a small sample. I know that some substances probably are fairly benign, to many users. And alcahol is no saint for sure. But turning it all loose would be a sure recipe for disaster for huge numbers of young, the clueless and those with poor self control. I think our problems would magnify overnight, bad is it is now. The crime rate would soar. And evidently Cecil would be happy.

All that said, I sure agree that what is now in place is pitiful, ineffecive and at that, selfperpetuating. It's not a war that we will ever win at this rate. I agree with Jesse Ventura, Hans' governor. He says we will never win the war on drugs by tryint to cut off the supply, they'll just change to some other source or route of delivery. It's got to be won at the consumer end if it is ever won. Don't seem to likely at this point.

Dick

No, you and Bill and Cecil say you believe that. Others, not so. You haven't yet convinced me and many others that your opinion prevails over a large body of evidence and testimony to the contrary. It is not likely you ever will.

Don't you DARE come in here with that "murdered" crap! Funny thing, the only thing the anti-capital punishment people do is whine over the criminal and NEVER do they say a thing about the VICTIMS of their crimes. He should have to suffer in death and not just go to "sleep" after an injection. I would LOVE to witness him swing at the end of a rope or squirm in a gas chamber, or dance to the tune of 20,000 volts!
GRRRRRR!

Phil, I don't think it really matters what the person claims. According to Title 47, Sec. 95.426, the operator must allow an inspection of his station upon request, which would include all radio equipment used. If, during that inspection, an illegal device is discovered attached his station (one indication, in addition to the neighbor's complaint, that it has been used), the use of the illegal device in itself is a violation under HR-2346. At that point, it really doesn't matter where the original non-conforming signal came from. Now, we could sit here and argue for days whether a device attached to a station, along with an interference complaint, is enough to prove that the device has been used, but neither of us will be certain until a number of these HR-2346 cases are resolved in the courts.

I understand that, Phil. However, as I said earlier, these cases will be somewhat different than the ones you were involved with at the FCC (misdemeanor, smaller fines, etc).

>   A charge of "using non-type-accepted equipment"

Forbidden by god? You'd better read your bible a little more thorougly. That
part about "suffer not to let a witch live" comes to mind.

No, Bill, I have a better idea - you pay careful attention (because I've answered that very question at least seven or eight times in this thread already). According to Title 47, Sec. 95.426, an operator must make his station available for inspection upon request, which includes all of the radio equipment used. That, Bill, is how the cop gets to see the radio in a person's home.

> And as Phil Kane noted before...the cop has NO
> right to insect any station at all. Indeed,
> the person could simply state: "I have NO station
> of any kind."

Title 47, Sec. 95.426 (and please don't ask what happens if the operator refuses to allow the inspection - I've answered that several times before also)

> The rules of law, prosecution, etc still prevail.
> Assuming someone is "charged", the person can always
> enlist the help of an attorney. Indeed, I suspect
> that would happen far more than you think.

We're just going round and round in circles, Bill (and Phil). All of the stuff raised in the last few messages has been discussed in this thread before (much of it several times), so why keep repeating the same stuff? I, for one, have better things to do. So, with that in mind, I give up - you're right, Bill (and Phil), HR-2346 is completely unenforceable. The attorneys at the FCC who helped to write HR-2346 were wrong. The attorneys on capital hill who sponsored the bill were wrong. The attorneys on capital hill who voted to pass the bill were wrong. The attorneys who handed the bill to the president to sign were wrong. All of that effort was a complete waste of time - the new law is absolutely unenforceable.

Only "most of the time?" When would SSB be more effective than CW under "backpacking" conditions?

>>How is that applicable to 1966 standards and practices and the
>>alleged inability to govern the US ARS from Newington?
>
>ARRL does not govern the ARS, so its alleged ability to do so is moot.

One cannot deny the fact that the ARRL has a great deal of influence with the FCC when it comes to the regulation of the ARS.

Larry:

Great idea -- I'm all in favor of it. And since those who vigorously supported a reduction in the code testing requirements have always claimed that this would bring about a higher level of technical knowledge in the ARS, I believe that there should be an international requirement for all new hams to take a stack of old TV's and VCR's and build a functional, multi-mode, 160 thru 450 MHz transceiver with the components thereof. The only new components that would be permitted would be metal or plastic components for a hand-built case for the completed rig. This should be completely within the capabilities of all of the young, computer-literate, technical geniuses who have been "excluded" from amateur radio by the archaic code testing requirements for so long. I can't wait to read about the results of the first round of new ham "tests" in QST and 73.

Since knowledge is the key, and all these new yahoos are Technical Gurus, then I guess what we should do is get rid of CW Testing, and present Memorization Test, and require all new No-Codes have at least a B.S. EE, if thats to tough then lets require at least and 8th Grade Education. Now that sounds like a good compromise for getting rid of that nasty CW thing.

The common element between the tragedy and the Morse code exam requirement is misguided US national and international policies. Policies that defy common sense and law.

From a CNN story: The Pentagon pointed out [in 1994] that the United States argued vigorously after the Soviet Union shot down a civilian Korean jetliner "such actions violate article 3(d) of the 1944 Convention on Internal Civil Aviation and customary international law."

ITU rule S25.5 and FCC rule 47 CFR 97.503(a) are unnecessary, bad public policy, and not in conformity with 5 USC 706.

The FCC is moving right along with its housecleaning work, now time for President GW Bush and Secretary Powell to review President Clinton "war on drug" aerial combat polices.

Larry, do me a favor. Read my response and then attempt a response.
I did not address U.S. drug policy at all.

> As for the connection the FCC amateur radio I would recommend that you read
> the WT Docket #98-143 comments filed missionaries. They may enlighten you.

Take this as fact: The death of the woman and her child had nothing to do with amateur radio operation or with mores code testing. That you tried linking the two reveals you to an opportunistic and self-serving boob.

Ed, the FCC dropped the 13 & 20 wpm code exam because it failed to serve a regulatory purpose, not in conformity with 5 US 706. While some argue that it was adversely effecting the numbers, it was not the primary reason for the change.

If the number of licensees was growing at 5% per year, do you think the FCC would have come to a different conclusion?

I assume this would only be for Extra class applicant and licensee.
All Extras would have the privelges reduce to General until the met
the new HIGHER standard.

Several years ago, 73 Magazine had some good articles on build thing
out of old TV sets.

Are saying that missionary hams that hold licenses lower
then Extra class are incompetent?

How do "they" beg the forgiveness of their victims if the victims are
already dead, Larry?  Why should a murderer's life be spared when he/she
has taken away the life of another(s).  Why should he live when he
has deprived a child of his parents, or parents of a child, a wife of
her husband?  I say BURN every last one of 'em.

I don't know if this is liberal, conservative, or BIG BUSINESS. Lately, all I read about is how this large corporation or that large corporation is building in China. Don't kid yourself, big business is running the country. I hope you don't think they only contribute to the Republican party. They want whoever ends up in office to be indebted to them. I look at the huge tax breaks given to big business and want to cry. Spend hundreds of thousands of dollars in tax exemptions, forgiven loans, whatever - just to create a job or two (divide the number of buck$ spent by the jobs created). This leaves small businesses and individuals to pick up the tab. Even natural gas and electricity - now there is a charge just to be connected. Oh, then the storage charge. This means the utility (Rochester Gas & Electric in my case) can charge only 8.5 cents per kilowatt hour - by adding the $17.00 monthly charge for electric, it averages over 12.5 cents per kilowatt hour to me - but the charge disappears, in essence, with the large usages of big users. Same with natural gas. Can you imagine, with the average price of gasoline at say $1.70 per gallon, a station charging a fee of $5.00 to use their pump (storage fee?) and then sell it for $1.50 per gallon? As long as you fill up to the tune of over 25 gallons, you make out. Said gas station would be out of business very quickly, but the utilities are still monopolies and that isn't about to change.

You left out one - Learning.

The facts are that the General that
> conveyed all amateur priveleges could be passed by studying a 16-page study
> guide until one had it memorized.

Maybe so...but by the time you did you LEARNED, necessarily, something
about the subject matter. It was not just a matter of making word
associations that you could recognize as pairs, as it is today.

> The fiction is that the hams of your era learned every single detail for their
> exams and the new hams of this era are memorizing over a thousand questions
> without understanding.

The fiction is that you would even make such an invalid statement. I
know that when I took the Exra exam I was far more learned than as when
I took the Novice or General, and I've sakid that many times, for you to
ignore. Just as you continjuously ignore the fact that no one EVER
attempts to memorize the entire question pool.

> I have little doubt that you actually believe that, but
> for the life of me, I can't imagine why.

You have your own views of where you want to help the ARS go, and I amd my 'assertions' don't fit, so you have to see to it that I can't be accorded any real credibility. That's reason enouth, evidently.

In article <3AEA6592.93AB9199@sccoast.net>, Dwight Stewart says...

> However, I'm very uncomfortable with the idea of ending a career
> based on how many seconds a person looks through a periscope.

His career didn't end because of how many seconds he peered through a periscope. His career ended because USS Greenville was so poorly prepared for a routine peacetime demonstration drill that it failed to detect a 500-ton fishing vessel, and sank the vessel at a cost of 9 lives, while negligently hazarding a multi-billion dollar nuclear submarine and it's crew.

The responsibility for the training and preparation for that drill, plus the safe execution of the drill lies directly on the Commanding Officer. He got off easy.

"Thou shalt not kill" lost something in the translation. It should have been "Thou shalt not commit murder". Consider all the people who were killed, at the command of God Himself, at the Battle of Jericho and elsewhere. God Himself, killed all the first born of the Egyptians and drowned their fathers.

Actually, ALL of them are available to ARRL members. I think you meant that about half of them are only available to ARRL members.

But were there 500+ articles there a year ago? I visit arrl.org several times a week, and the impression I get is that new stuff is constantly being added.
>
>>Besides the Product Reviews, how many of the articles that would be of

>(http://www.arrl.org/tis).

From what I see, the choices are pretty good. The only info that would be of real, near-universal interest to a newcomer, that requires membership for access, is the Product Reviews. But they fall under the classification of "being primarily of interest to the individual" rather than "ham radio as a whole".

Not only that, Larry, but the Feds are doing exactly what McVeigh wants them to do -- allowing him to "commit suicide-by-cop, deluxe style". Besides being undeterred from his act by the death penalty, he actually increased the scope of his crime so that he would be assured of receiving it upon conviction. He is an enthusiastic product of the 'culture of death'.

BTW, this thread is coming in at 30 over S9 on my troll-o-meter down here in Arizona.

Dick Carroll wrote:

> It was not just a matter of making word
> associations that you could recognize as pairs, as it is today.

Give us an ever-loving break, Dick. Boosting your sagging ego is not a good enough reason to ignore the truth. Please try to enhance your self-esteem without denying reality.

The 1957 ARRL License Manual states: "If our *ANSWERS* sometimes seem to the initiated to be naive or incomplete, rest assured than they are *SUFFICIENT* for the purpose." Which means that word associations have always been possible (at least since 1951). What is it about " our answers are sufficient" that you do not understand?

Ed, Bill, and I all rote-memorized the Q&A to pass our first exams. We would not have passed them otherwise. That it hair-lips you to admit the truth is your problem, not ours.

Your argument that you achieved a level of knowledge that is not possible today is sheer nonsense. You could have just as easily rote-memorized the Q&A as Ed, Bill, and I did. You probably did just that and presently cannot accept the psychological pain of knowing that is exactly what you did so you are compelled to deny reality. You are addicted to your irrational beliefs about past ARS testing. We understand your pain, Dick, but we are not going to enable you to ignore reality. It's called "Tough Love".

Yea, it's real easy to memorize some simple sayings, laws, slogans...
Catholics are good for that.

It's harder to actually THINK about the God who commanded that command,
and then told the same people to go into the land an UTTERLY destroy all the
inhabitants.
Obviously, there is a problem with simple interpretations.

"Those that serve the goals" are then in your personal judgment.

I'll have to ask the reasoning for a couple of the "members only"
category -

Receiving Wire Antennas. [specifically labeled as 'receiving'] Is there something "different" about radio physics where receiving radio signals from hams is different from receiving radio signals from all other radio services? I'm not trying to be snarly there since, as a non-member, I can't find out what is under those articles but I have to wonder about the "receiving" part as it pertains to only members.

History of Amateur Radio. It would seem that newcomers would want to learn more about that history written by the ARRL to find out more. Of course, that could have an alternate of having to buy the Handbook which contains an encapsulation of that ARRL history. :-)

Smith Charts. Tutorials, I'm sure. Everywhere else in the RF world those Phil Smith charts are Primary as to knowledge and relate very well to impedance/admittance, transmission lines, and so forth. Sorry, but I cannot see that as a restricted-access item unless there is some strange need to keep beginners or newcomers or non-members from basic knowledge of Z and Y. Okay, I'll agree that one is borderline.

>I am sure that those who choose not to receive QST magazine will understand
>that they do not have access to some of the articles that have been paid for
>by those that do choose to get it.

I'm also sure that the ARRL would think that the new past-issue sets of QST and QEX on CD-ROMs will sell better and make more profit.

Now don't get me wrong and get all overheated. I will accept a $5 charge for xerocopies of particular articles as being generous. No problem. Anything under a $100 for a whole year's worth of issues on CDs seems reasonable to me.

But, I can also access many past articles in the industry trades such as EDN, Electronic Design, RF Design, Microwaves and RF all for free through their website even though I get those in hardcopy every month.

I'll defer on discussing copyrights, author's compensation, and free legal reprinting of articles as I've done that before.

I'm not sure I see where all the restricted access on past articles is being of any benefit other than selling CDs. Particular membership-only information makes sense in having restrictions. Restricting information on technology (as in "we know what is best for you" et al) can backfire.

Voice communications can be done "mobile-in-motion" (while hiking, especially with a staff in hand). It is difficult (but not impossible) to do that while transmitting with a key. I will agree on the low-power aspect for portability being important.

In the context of my message comment, I was citing the FT-817, a new lightweight, low-power, ALL MODE transceiver that covers 160m through 70cm. In that context I was wondering how this new product benefitted the CW operator compared to all other modes available in the transceiver. The FT-817 is a new Yaesu product and a check of the Yaesu web page still shows only the preliminary data having the "not yet approved by FCC" disclaimer at the bottom. If there is some new feature enabling better CW in this particular product, then that should be interesting to many.

>>How is that applicable to 1966 standards and practices and the
>>alleged inability to govern the US ARS from Newington?
>
>ARRL does not govern the ARS, so its alleged ability to do so is moot.

I disagree on the use of "moot" in context. The ARRL has so strongly influenced the FCC for so long a time and made that influence and resulting action clear to so many that the "ARRL decisions" are almost a de facto "ruling" of the US amateur radio community.

The large membership count (162,671 in June 2000 according to QST Publisher's Statement) and the publishing part (profit making) of the ARRL enables retention of a legal firm in Washington to represent and lobby ARRL decisions and policy with the FCC over and above that of any other US amateur radio organization, certainly over the same abilities of individual radio amateurs or citizens. That, along with a very long-time self-promotional advertising of itself in its own publications has certainly "imprinted" the "authority" of the ARRL in many radio amateurs' and radio-involved citizens' minds.

I'm not saying the ARRL is doing a "bad thing" with the above, but denial of the most obvious quasi-offialdom of the ARRL for decades is somewhat ludicrous.

Which I mentioned in my reply of two days ago (cf: HR-2510).

The problem with having an "illegal CB list" with these radios on it is that these radios are perfectly legal in the radio service they were built for (amateur). That's bound to get some local cop going after amateur operators, not realizing that he has no authority to do so, with the amateurs then going after the cops via a 42 USC 1983 lawsuit aimed at having their [4th amendment et. al.] rights violated.

All this will do is teach cops to treat this law, formerly HR-2346, as a "blue law" at best, and definently something to ignore, thus nullifying it, but only after significant taxpayer expense as a result of being sued.

I do believe that it will lead to a court case: Of some FCC licenseholder suing a municipality over having taken the law too far (i.e. having been arrested as being an "illegal CB'er" when operating properly within a licensed service he holds a license for).

...But have those citations and regulation sections yet been amended to permit
inspection by non-FCC personnel who are properly charged with enforcing these
new local "CB laws?" I doubt it. Until the FCC makes that change, there can be
no inspection by non-FCC employees.

Bingo.

Chrisitanity was not the only religion under consideration for becoming the state religion at the time of Constantine, either.

The idea of separation of religion and government is quite recent - only goes back a little over 300 years. It was considered a radical "experiment" at the time....
>
>Taking the easy path of co-opting the locals is probably the only way to

>that Halloween is now second only to Christmas for selling stuff, maybe
>later generations deserve it.

Actually, I see it a little different. People all have certain basic psycho-spiritual needs, and religions adapt themselves to meet those needs.

Consider Christmas. In Europe, the days grow VERY short in winter (Philadelphia and Naples are at approximately the same latitude. Northern Europe is about as far north as Newfoundland). In pre-Edison days, winter was a very dark time for most Europeans, and it was easy to think that the light would never come again. Long before SAD (Seasonal Affective Disorder) was described by medical folks, the mental problems associated with lack of daylight were being experienced.

Most Euro cultures developed ways of determining when the days were actually getting longer (the light was returning) and had festivals to celebrate the "coming of the light". Since Christians describe Christ as "the light of the world", it didn't take much to see that it made lots of sense to put Christmas (the day the light of the world arrived) on the first day when the days were measurably longer with the available technology - Dec. 25.

If a religion doesn't address people's needs, they change it or go elsewhere if they can.

Dwight Stewart made a mention of a Part 95 regulation. I just added
an overall note to show that inspection is possible in any radio
service (including no search warrant required according to the FCC).
Any radio service. That includes amateur radio.

It might be fun to prognosticate on a House Bill not yet passed into
law...but, isn't it more prudent to consider what is already law now?

The death penality doesn't make any sense in McVeigh's case because he *wants* to die. How is death a punishment if that's what the person wants?

Room 101 would be the best punishment.

Having lived in Wisconsin right on the 45th parallel I can testify about 6 hour days.

Celebrating the return of the Sun when you don't have a clue of the process is fairly universal and not confined to northern latitudes. One of the competitors was in the chain of Persian Dualism where the God of Light (Mazda; the Japanese company got started making gas-filled light bulbs) and the God of Darkness fought it out with the outcome in doubt. Christianity skirts Dualism with all of the dancing ability of Fred Astaire.

I agree the human race seems to have urges both to explain and commemorate (if not to control like hurricanes off the East Coast). It has always interested me that most religious ceremonies are celebrated at the Church and the Saloon in that order. The Unitarian clergy will generally perform virtually any ceremony one finds meaningful. This led Jack Mendelsohn from Indianapolis (the man who did the grunt work for Jesse Jackson in Syria) to be among many other things the chaplain for the Albert Schweitzer Motorcycle Club -- once performing a wedding sitting backward on a Harley.

This urge seems to explain the human interest in the T O and E of the various gods which led to the Doctrine of the Trinity, a concept which about 2 people in 100k actually understand (me not among them) and half of them are atheists. One of my favorite OT stories is the man so impressed by Elijah that he took home a box of dirt to worship Yahweh. The idea that a local area had its primary god was prevalent at the time. For a king to kill his son on the walls of the city was pretty effective at spooking the attacking Israelites; seems they weren't too sure that Yahweh's moxie extended beyond his turf.

Festivals at the solstices and equinoxes are pretty common. By the time the date for Christmas was set, the Julian calendar (that gains 3 days over 400 years on the present Gregorian one) had already made the Winter Solstice come on 25 December. George Washington's birthday in the family Bible was 12 Feb, he made it the 22nd when England adopted the Gregorian calendar. Russia was the last, making the October Revolution occur in November. Had the Church not made the change, Christmas would be occurring in Lent.

You are of course familiar with the Nicean or Apostles' Creed which only makes sense if there were two sabbaths in the same week, which the early church fathers did not realize was really the case. So Good Friday occurred on Wednesday; the three days in question being the Passover Sabbath, a feast of some sort, and the regular Saturday sabbath. This made the tomb-watching required before sealing a tomb a bit difficult (no one wants to bury the living). Whether one believes in a resurrection or not, it is a fair bet that it was a tad after sundown on Saturday when the stone was found to be out of the doorway.

Incidentally, the Eastern and Western Churchs use slightly different formulas for Easter, the Orthodox requiring Easter to follow Passover.

Years started and ended near the equinoxes, days started at sunup or sundown. In fact March 1 was New Years at the time of Washington. Just how in hell did we get started beginning years in the dead of winter and days in the middle of the nite???

  One more time with feeling ... the enabling legislation DID NOT
  delegate the requirement to make the station available on request to
  the locals. Sec. 97.426 applies only to the FCC.

  The FCC procedures for inspection (based on relevant case law and
  policy) are very specific - a station operator cannot be cited for
  refusal to permit an inspection by FCC agents unless the station is
  found in operation (residential or business premises) or during
  normal business hours (business premises).  Even if the inspection
  rquirements were delegated to the locals, they would have to follow
  these guidelines.

>Now, we could sit here and argue for days whether a device
>attached to a station, along with an interference complaint, is enough
>to prove that the device has been used, but neither of us will be
>certain until a number of these HR-2346 cases are resolved in the courts.

  It's already been resolved by the FCC -- it's not.  There has to be
  proof of use.

  That's why, when the station is inspected after delay at the door
  and the amp is hidden, the only acceptable FCC power determination
  includes one agent inside measuring station power with an in-line
  meter and another agent outside observing any changes in the
  station antenna orientation and measuring a signal level (usually on
  a calibrated field strength meter or spectrum analyzer) to see what,
  if any, decrease occurred between the observed transmission and the
  transmission under supervision.

>>   A charge of "using non-type-accepted equipment"

>
>
> Title 47, Sec. 95.426

The cat chasing its own tail. Failure to make the station
available for inspection is not reasonable cause to require that
inspection. There has to be reasonable cause BEFORE the request
for inspection.

The FCC has no authority to break down the doors, so to speak,
and the locals can't assume that authority in enforcing powers
delegated to them by the FCC.

For any city that tries, I do hope that their coffers include LOTS
of Sect. 1983 (damages for illegal actions under color of authority)
money.

There is no common element which ties morse code testing to the shooting
down of a missionary aircraft in Peru, Larry. You've gone from being a
bad homemade lawyer to a bad homemade expert on U.S. policy foreign and
domestic. Did you find a book on U.S. policy in that musty trunk where
you stumbled across the law book?

No, Len, that's NOT what happened.

K0HB started this thread with a post about the license totals. Several people,
including me, replied to his original post. But nobody replied to my post
commenting on K0HB's original post.

Then on April 4 I posted some new numbers, based on a different time frame and
a few observations on those numbers. My April 4 post was not a reply to anyone
else's post - it stood by itself. Only one paragraph comments on K0HB's post,
```

and that is in the form of an explanation.

Here is my post of April 4, in its entirety.

(begin quote)

Subject: Re: Restructuring -- did it make a difference
From: N2EY
To: rec.radio.amateur.policy
Date: 4/4/01

Here are some numbers from the AH0A website to consider.

From March 31, 2000 to March 31, 2001:

- The total number of US ham licenses rose from 677,784 to 684,359 - a gain of 6,575 (1%)

- The total number of Extras rose from 75,985 to 95,243 - a gain of 19,258 (25.3%)

- The total number of Advanceds dropped from 103,048 to 88,082 - a loss of 14,966 (14.5%)

- The total number of Generals rose from 109,787 to 136,056 - a gain of 26,269 (23.9%)

- The total number of Technician Pluses dropped from 133,688 to 96,145 - a loss of 37,543 (28%) (See discussion)

- The total number of Techncians rose from 204,646 to 224,867 - a gain of 20,221 (9.9%) (See discussion)

- The total number of Novices dropped from 50,630 to 43,966 - a loss of 6,664 (13.1%)

The above totals are for individual licenses. Note that from a percentage viewpoint, the fastest growing class is the Extra, while from a number of licenses viewpoint, the fastest growing class is the General.

Since April 15, 2000, the FCC has renewed all Technician and Technician Plus licenses as Technician. Also, a ham who holds a Technician license and has passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though the database simply shows "Technician" as the license class. There is no easy way to determine exactly how many Techs are actually Techs with HF, because the FCC does not keep that information in its database. A lower bound on this number can be found by adding up the number of Technician renewals from April of 2000 until October of 2000 (3273) This works out to an average of 467 per month, or 5,604 per year, being reclassified from Tech Plus to Tech because of renewal.

There is also no easy way to determine the number of upgrades for most of the classes, because upgrades are recorded as "modifications", just like address or name changes.

The total number of "lots of HF" licenses (General/Advanced/Extra) rose from 288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring to in his post - more hams with lots of HF privileges.

The above figures reflect only one year's change, starting on the eve of restructuring. It will be interesting to see how the trends evolve over longer time frames.

73 de Jim, N2EY

(end quote)

I did not start a new thread because this thread's subject line was just right. You did not like several things I posted, and replied to my April 4 post, criticizing the choice of time interval and other things. I explained my postion, but you kept on criticizing it, adding comments whose logic and facts contained errors. I commented on those errors, but you refuse to admit to them.
>
>>You also derived some numbers by faulty methods. Like your claim of 59
>>Technicians reclassified from Tech Plus.
>
>That was not a "faulty method." The "59" number value was the difference
>between the total number of Technician license class increase in a ten-
>month period and the number of new Technician licenses in the same
>period.

Which is a faulty method because it assumes, among other things, that ALL of the new Tech licenses issued in that ten month period stayed Technicians. Because you didn't have upgrade data available, you ASSUMED that the upgrade number was ZERO for that ten-month period. THAT is a FAULTY METHOD, Len.

KE3Z posted information derived from the FCC database showing that 7079 current Technicians were reclassified from Tech Plus. 7079 is a lot more than 59. And because it is derived from the database directly, it is the most reliable number.

Note that in my original post, I gave a lower bound of 3273 reclassifications.

>That was stated at the beginning of a reply to Miccolis' claims of
>"faulty methods." A difference of numbers, stated as such, is not "faulty"
>unless the arithmetic is faulty.

It's faulty because you use the wrong numbers to begin with, and because you don't consider things like upgrades.

Here's a partial quote from my post of April 13, which explains how off base that 59 number really is:

(begin quote)

>In the ten months from the end of June 2000 to the end of March

>2001 the number of Technician class licensees increased by
>16,029

Let's check that out. AH0A says 208,838 at the end of June 00 and 224,867 at the end of Mar 01. Difference is 16,029. That part you got right.

> but of that, 15,970 were new licensees

No. That's NOT correct.

First off, the number of new Techncian licenses in the period you mentioned is 13,494, not 15,970. This is because the new license total for the period is figured by adding up the monthly new licenses of July 2000 to March 2001. The new licenses issued in June 2000 are already included in the 208,838 total, because those are end of month totals. So you are already off by 2,476.

Second, the situation is more complex than you present. Here's how it works:

There were 208,838 Technician licenses in the database at the end of June 2000. At the end of March 2001 there were 224,867. This increase is equal to the following sum:

```
   (new Techncian licenses)
+ (Technician and Technician Plus licenses renewed in the grace period)
+ (upgrades from Novice)
+ (Technician Plus renewals before expiration)
-  (expired Technician licenses)
-  (cancelled Technician licenses)
-  (upgrades to General or Extra)
```

You ignore most of those factors and just ASSUME that every new Technician did not upgrade in the ten month period.

> exclusive of any
>upgrading or modification or anything else except being new.

Wrong. See above.

>That leaves a difference of 59 which can be attributed to anything
>other than a new license.

Wrong. See above. You presume that none of the new licensees upgraded in ten months.

> Those 59 MAY include all those
>Tech-Plusses who were automatically "renewed" as Techs, but
>that group only represents 0.37% of the total change.

Nope.

A few days ago it was posted here by Jon Bloom that, in the current database, there were 7079 currently active "T" (Technician) licenses with "P" (Technician Plus) in the "previous license class" field. That's straight data from the FCC

database. 7079, not 59. That number is a minimum, because the FCC continues to renew Tech Pluses as Technicians every day.
>
>>SO? The effect is still there.
>
>How BIG of an "effect" did you say it was? :-)

7079 out of 13,494 is a bit more than half.

(end quote)

Really faulty methods there. Len.
>
>The original subject thread began with the effects of restructuring
>following the April 15, 2000, change.

That's true.

> Miccolis tried to use data prior to
>that date to indicate post-restructuring effects.

Nope. I started a whole new subthread. The subject line is "Restructuring -- did it make a difference". Nowhere does that constrain the time period considered. Imminent restructuring caused some hams to get licenses or upgrade BEFORE April 15, 2000, for several reasons.

>That in itself is faulty
>and misleading since it lumped pre- and post-restructuring data
>together instead of making a comparison.

Nope. The time period was clearly spelled out. And the effects of restructuring began before April 15, 2000.
>
>>You also made statements that are clearly incorrect, like Technicians with
>>Element 1 CSCEs having no HF privileges.
>
>No. I said nothing about "Element 1 CSCEs having no HF privileges."

Yes, you did, Len. Here are your exact words:

"Those 15,970 new Technicians still don't have any HF access with/without CSCEs."

Go to Google and look it up.

I have asked you the following question repeatedly, but you avoid answering for some reason. So I ask yet again: If a Technician licensee passes Element 1 and gets a CSCE for it, but does not take any other tests, does that Technician have any HF privileges or not?
>
>Neither did I say anything about "Easter Bunnies" although Miccolis seems
>to claim that I did.
>

Nonsense. I simply pointed out that your belief in something doesn't make it so.
>
>The trend prior to restructuring had new license growth coming from
>the new Technician class licensees. So much growth that it offset
>the attrition from dropping code-tested license classes. The net
>result was a small increase in the number of total ARS licensees.
>That trend continues following the April 15, 2000, date with very
>little change due to Technician Plus renewals shifting to Technician
>license class.

7079 documented reclassifications from Tech Plus to Tech out of about 15,000 total growth in the Tech license class is hardly "very little change".
>
>My only dispute with Hans Brakob's posting was relative to the
>number of radio amateurs with HF privileges.

So?

> I did not observe any
>great change, only a continuation of the trend that had been
>on-going for several years.

> I still hold to that observation regardless
>of allegations of "faulty methods," "errors," or "mistakes" levelled by
>long-timers who seem to wish things were otherwise.

No. You made other statements in response to MY post which clearly contained faulty methods, errors and mistakes. You refuse, for some reason, to examine your mistakes, or admit to them.

Shall I post them AGAIN?

Considering current law:

It's nice that Congress has co-delegated authority over enforcement of the CB radio service to local law enforcement (upon local laws to fill in the gaps being created), but the problem is that if the federal regulations continue to say that inspection need only be granted upon FCC request, there will be no authority for local law enforcement to act: Without inspection, how can they legally move upon "probable cause" to the enforcement action. They're barred from a fundamental step needed in the evidence gathering process.

I give up, Phil. We're just going in circles with this. You don't seem to remember what I said two messages ago and I'm tired of repeating everything (only to have you forget what I said that led up to repeating it, which means that I then have to repeat that - starting the whole thing over again). I know you don't like HR-2346 and have convinced yourself it will not work. However, I think your negative feelings about this bill has clouded your judgment. This legislation is now on the books and it is eventually going lead to local legislation and enforcement. And, in spite of your thoughts otherwise, I strongly suspect that enforcement is going to stand up in courts. Of course, like I said earlier (repeating myself once again), we'll just have to wait to see. Take care.

I don't know. There aren't too many "freebanders" running equipment that expensive. I suspect a list should only include the most common stuff, not necessarily everything a person could use (a list like that could go on forever).

> I know plenty of licensed amateurs who own
> Rangers and Lincolns (The latest incarnation

> My question is are licensed amateurs "exempt"
> from the list?

HR-2346 exempts any person with a license in any radio service. The FCC will remain the sole enforcement agency when it comes to licensed operators.

> What about an unlicensed person who claims he's
> just SWLing until he gets his ticket? [snip]

As long as he doesn't transmit with it, he has nothing to worry about (HR-2346 covers operation, not possession).

> Can a ham legally own and use a Texas Star on 10 meters?

Yep, as long as he stays in the ham bands. However, watch out for stray emissions - some of those home-brew CB linears are fairly dirty.

Dick Carroll wrote:

> Uh, Dwight, it's called "going through the motions" instead of getting the job done. We see a lot of that these days, and even more of it here on this NG.

You're right. And we also love to assign blame today. Few seem to understand that accidents happen all the time, but that does not necessarily mean someone at fault. It reminds me of the woman who sued the city because a tree limb fell on her during a wind storm (the tree was on city property). I cannot imagine how anyone could hold the city responsible for a wind storm or tree limb. However, the court did exactly that - the woman won.

All this debate begs one question.......

What are you all doing to help PROMOTE amateur radio?? (all that may read this)

Pretty soon, I will be posting a list of ideas and suggestions to help promote our hobby to youth, (in this hobby that would be most anyone with the aptitude that is under 30 years of age) that I have collected from hams from postings on QRZ.COM and here in the newsgroups....

Its interesting, but I AM the youngest ham in my county.... and I am going to be 31 in July. Hopefully my efforts of promoting amateur radio to youth (ages 30 and under) will provide to have been useful.

73's to all!

Ryan KC8PMX

Before I go, let me ask these final questions relating to the probable cause issue, Phil. If, as you say, Sec. 95.426 (inspection of station upon request) does not apply to local enforcement, and probable cause is required before ANY enforcement of HR-2346, why would there be a need for a paragraph (paragraph 7) describing a specific situation where probable cause is required (as if that were the sole exception)? For that matter, if probable cause is required (Sec. 95.426 does not apply), then why would only one paragraph (paragraph 7) mention probable cause?

And, with that, I'll back out and let my involvement in this discussion end with your reply.

Leaving out whatever this thread has been about, who the authors are, etc., etc. Should one presume that it is being suggested we must all be political science majors, have worked in public policy groups, be board approved as an attorney, etc., before we are entitled to have opinions now? In the United States, *experience* is not required for us to vote and have opinions.

It would be difficult to make such a presumption since context is important to the issue. A man who is not an attorney but who regularly posts as if he was an expert on law probably will likely not be taken very seriously. In this case, the man who frequently does so has tried to link the tragic shoot-down in Peru to morse code testing. He has proclaimed that bad U.S. policy ties the two issues. He also added his personal eulogy bemoaning the late missionary radio amateur's denied HF access in her home country (as if being shot from the sky wasn't enough of a reason to mourn her).

Anyone in the U.S. is entitled to an opinion--even if it is based on flawed thinking and lack of information. Those who reach eighteen years of age may vote. That vote can be cast based on flawed thinking and lack of information. No one is forced to read a newspaper, a news magazine or even to watch what passes for news on TV. Those of us who stayed awake during civics class in school remember that we have the responsibility to make informed choices. No one forces us to carry out that responsibility. Stupidity has not been banned so we are also free to make bad or poor choices.

We don't vote on each local, state or national issue. We elect representatives who vote on these for us. So, Kim, you need not be a political science major or graduate nor do you need to be an attorney before holding opinions. You should have some idea of what is going on before you form those opinions.

So, in your comments regarding the thread, do you see a link between morse testing and the death of a missionary woman who happened to hold an amateur radio license? Do you agree or disagree with Larry's attempt

to use the issue of the shoot down as a means of delivering additional
anti-morse code testing rhetoric?

Think carefully....

In article <3AEBB9F3.834AE83B@sccoast.net>, Dwight Stewart says...

>And we also love to assign blame today. Few seem to
>understand that accidents happen all the time, but that does not
>necessarily mean someone at fault.

USS Greenville did not surface by accident, but deliberately
without proper regard for other shipping in the area, resulting
in the loss of another ship and nine lives.

Mea culpa. I think there were about 400 articles available for download on the TIS pages. One other benefit to the members-only aspect of some of the articles is that I can put more of them up there without raising the eyebrows of the ARRL bean counters. :-)

>Only "most of the time?" When would SSB be more effective than CW
>under "backpacking" conditions?

Even under backpacking conditions, SSB can exhibit an excellent S/N margin
under some conditions. Under those conditions, SSB is more effective than CW at

getting information from point to point. Once the S/N exceeds what is needed, further improvement is moot and the effectiveness of a mode then becomes primarily a function of throughput. Spoken communication is faster than manually sent and decoded OOK Morse CW.

I probably would not find that to be very difficult. :-)

>In that context I was wondering how this
>new product benefitted the CW operator compared to all other
>modes available in the transceiver.

The portability benefits of the '817 apply to all of its included modes and bands.

>The FT-817 is a new Yaesu
>product and a check of the Yaesu web page still shows only the
>preliminary data having the "not yet approved by FCC" disclaimer
>at the bottom

The product has been approved by the FCC; that is why it is being offered for sale. The Product Review didn't get under way until the FCC process was complete.

>The ARRL has so
>strongly influenced the FCC for so long a time and made that
>influence and resulting action clear to so many that the "ARRL
>decisions" are almost a de facto "ruling" of the US amateur
>radio community.

I disagree that the influence of ARRL is best described as "ruling."

>I'm not saying the ARRL is doing a "bad thing" with the above,
>but denial of the most obvious quasi-offialdom of the ARRL for
>decades is somewhat ludicrous.

I would not have disagreed with the detailed explanation you offered, Len; I disagreed with the far-simpler summary that ARRL in any way governs amateur radio. Those governed by law have no reasonable choice but to follow the law; people still have the choice to follow or not follow ARRL's leadership or influence.

Surely you see the difference.

I know of no official attitude that says that, Dick. Can you provide any quotes or references to anything you consider "official?"

> My premise is that for any license beyond entry level the applicant

> had little choice but to learn. Today that is not so.

I believe that a General Class license that could be passed with a week's worth of "studying" a 16-page study guide was no more forcing learning that the requirement to learn the correct answers to over 1000 questions today to get the same priveleges.

Figures some snot nosed kid would come in and try to tell all the old pros (timers) how to improve! Ryan, don't you know that if they can't come up with it themselves, it can't be done? Besides, if any of your whipper snapper tactics work, they'll all have a touch time trying to agree on what's next on the bitch list! Hey, maybe increase the code requirements!

One of the BEST ways to generate interest is involvement.
We need to expose people to what we do and somehow engage
```

tjem into our activities.

I've suggested to the ARRL that the Field Day novice/tech bonus station should be replaced with a third-party station (operated under similar rules). Intended or not, club focus upon "points" would encourage more pro-active recruitment of new people.

Instead of just handing out brochures to our visitors, we can give them a taste of the fun by getting them involved.

Field day could become even more family oriented by giving more people a more direct role in the activity.

News coverage would probably be better. I can imagine getting a newscaster behind one of our microphones for a longer human interest piece.

We could invite the people we've worked with and helped throughout the year (law enforcement, Red Cross, Salvation Army, YMCA, etc...) to come join us in our premiere activity. What better way to encourage comradiere?

Of course, no single change will generate the total effect we want, but I feel that this is a step in the right direction.

>attempts to memorize the entire question pool.

EVER? Okay, a handful of people memorize over 1000 questions without understanding. The larger majority do what I did which is to pass their exams with a combination of studying, memorizing, lucky guessing and just plain hoping that some subjects don't appear on their exam.

What is with you and "ignore," Dick? On a number of occasions I have agreed with you that the Extra of your era is exactly as you describe. How is that "ignoring?" Can I assume you play the "ignore" card if you think you are losing the discussion?

What you ignore is the fact that in the days you took that Extra, it was strictly a "vanity" license; the General of that day carried all operating priveleges. That one could pass by studying and memorizing a 16-page study guide.

If we had gone from an exam of 1000 questions to a simple exam that could be passed by studying a 16-page study guide, you would be leading the howls of protest that we had dumbed down Amateur Radio. Would you like to go back to the days when a ham earned the whole ball of wax by studying 16 pages?

My views are as they have always been, the cheaper it gets the less its wanted.

Sure it all looks good, but cheap just don't make it better. Amateur radio is almost being offered at a give away and the sales are down. I bet that 1 % percent increase would have been higher if everything was left the way it was.Who said our frequencies will be taken away and all sorts of other bad things are going to happen if the ham radio population does not increase. I think the worst thing that has happened so far is the restucturing. Yup, the left foot gets shot again, ouch! J1

Please, give me an example of a "victimless crime."

You can't use "drugs" because they are not victimless crimes. Someone almost always has to pick up the slack or suffer as a result of someone using and abusing both legal and illegal drugs. Who suffers? Friends, family, co-workers, tax-payers -- the list is pretty long. Friends and family suffer emotionally and/or financially. Co-workers have to take up the slack and tax-payers pay for the so-called "free clinics" where these people generally end up. No I am not for socialized medicine but I think that if someone TRULY can't afford treatment that the government (you, me and the doctors) should pick up the tab.

Given your thinking below I can sneak up behind someone and pick his pocket. No use of force in that interaction so it should be legal right? I do agree with certain aspects of libertarian philosophy. You can't legislate away stupidity for one. But certain laws are to protect the "innocent", for lack of a better term, from the stupidity of others. For instance, in Texas it

is illegal for a person under the age of 18 to ride in the back of a pickup
truck at speeds in excess of 30MPH. I think it should be illegal period but
many disagree. I have witnessed for myself a child cartwheel out of the
back of a pickup at 60MPH. The result wasn't pretty. The parents got a
slap on the wrist, "child endangerment." A $2000 fine and suspended
sentence. What was their crime? They just killed their kid, that's all.

Phil,

I know that many visits to "questionable" stations were done around here by FCC agents and US Marshals. Is this common practice around the country? If so, what are the reasons for having them, or other officers, acompany the agents?

Tnx,

Jerry

No it tells me that He didn't want or need to re-invent the wheel as He
created live on this planet.  While the parts are not interchangeable the
principles behind their operation remain constant from species to species.
Just like the engine in my Mercury Villager works basically the same way as
the engine in my Model T.

My submission to the newsgroup was not dependent upon topic or credentials. My post to the newsgroup was on the line: "This is most interesting coming from a fellow with little if any experience in either field." It seems that most of your observations above, in direct response to my comment, would agree with my comments. It seems that your admonition (if you will) was more out of emotional response to something you disagreed with. Thank you.

Kim W5TIT

Ryan...

Lots of Luck..

As long as they keep that SILLY code requirement, you are very
unlikely to get young folks into an archaic hobby.

Dan

I thought all the vanity callsign gates had already opened.

Oh, wait, this is the gate that lets you trade in your ham radio
callsign for a bootleg 'handle'.  Ah, yes!

I'm retired and living alone, Kevin. Please explain how me having a
joint alone in the privacy of my own home causes anyone to suffer. When
I was married and living in CA, my wife and I smoked pot regularly. It
enhanced our sex life and contributed to our marital bliss. We were
responsible adults and only smoked it at night after the kids had gone
to bed. Drugs can be used responsibly or irresponsibly, just like guns.

> Given your thinking below I can sneak up behind someone and pick his pocket.
> No use of force in that interaction so it should be legal right?

Of course, that's using force, Kevin. That victim is being forced to
give up his wallet against his will even if he doesn't realize it
until later.

> For instance, in Texas it
> is illegal for a person under the age of 18 to ride in the back of a pickup

> many disagree.

It should be illegal for kids. It should not be illegal for adults. Kids
should be protected from stupid parents. Adults should not be protected
from themselves. Otherwise, someone may force you to get a facelift to
save you from being so ugly.

So when God said he created man in His own image, he was pulling our legs.
I can believe that. I've always thought God had a weird sense of humor.
So did Mark Twain: Why did God design a man to desire all women and barely
be able to satisfy one, then design a women, who could satisfy any number
of men, to desire only one man? From: "Letters to Earth"

I didn't say *all* we did was rote-memorize, Ed. Question is: Would you have
passed without any rote-memorization at all? Careful now, I don't know any
way to know the band edges without simply rote-memorizing them.

Ryan

I am right there with you. I am 29 years old, and the youngest member of my local club. Any ideas you come up with, send them my way. I've been tinkering with the same thoughts myself.

Wow! Two for two! Don't stop now - you're on a roll!

Go back and read the rest of the bible, Oy Boy. Especially the parts where god actually condoned killing, and the murder of innocents. Every one of you seem to want to ignore this, and continue to only quote Exodus 20:13

How about this ... your arbitrary belief in "god" (he's the invisible guy
inside your head who tells you to be good right) has no bearing on life
whatsoever

--
Rob St.Denis

I did not say that, Dave.  You keep distorting the fact to satify your
conclusion.

I said that it is wrong for miltiary frighter jet to shoot down unarmed
civilian aircraft, and its wrong for communications adminstrations
to impose a Morse code exam requirement that is unnecessary,
bad public policy, and not in conformity with 5 USC 706.

Did your "god" tell you to spell that way ? So a bunch of people are crazy enough to believe that there is a god ... doesn't make him exist any more than he ever did.

If one person believes in an invisible being who's all powerful and such he is crazy ... if a few people do it it's a cult ... if a population does it its a religion ... why isn't it a population of crazy people ?

Non-sense Dave, I cite a Federal statutes to assert that a
particular ITU and FCC rule are wrong. You have no reply,
except to attack me personally, shows the weakness of
your position.

> In this case, the man who frequently does so has tried
> to link the tragic shoot-down in Peru to morse code testing.

Dave, do you believe that it is a proper US policy to US
military resources to direct foreign warplanes against
suspect civilian aircraft, particularly after the Penagon
warned in 1994 that this had a high risk of killing innocent
people.

> He has proclaimed that bad U.S. policy ties the two issues.

Dave, the United States morse code policy has already changed,
and I suspect that the US aerial combat support policy against
civilian aircraft will change.

Larry KC8EPO

Cecil:

That's very interesting, but not responsive to the question.  FM was
never mentioned; SSB and CW were.  We're talking about backpacking
with one of those new Yaesu FT-817's or a comparable rig on the HF
bands (yes, I know the thing goes to 450 MHz on all modes).  Sooo,
if you have a response that is germane to the discussion at hand,
let's hear it.

Sorry Cecil, you've got the wrong feller. I've never made any claims linking Morse code proficiency to technical competence, except as a coincidence. I possess purely AMATEUR technical skills -- and I'm not so sure I even know what an LSI chip is, except that I think the acronym means Large Scale Integration and that they combine the functions of several related systems on a single chip, reducing the parts count dramatically in devices like cell phones, 2-meter HT's, and mousetraps. I'm sure that 5 LSI chips may be two or three more than I need, if I knew what kind to get and what to do with them. However, I don't need anyone to show me how to program the memory channels in my HT -- because that is covered in the owner's manual, which I can read and understand without the assistance of an "Elmer." I can also have a CW QSO at 20 WPM, a PSK31 QSO at 60 WPM, and a RTTY QSO also at 60 WPM -- all within a few minutes of each other and using less than 25 watts of power into the indoor dipole I use from my 3rd floor apartment. Now that's *real ham* stuff in action!

I rate Tim McVeigh on the same level as Lee Harvey Oswell. He is no more than a government scape goat. I don't believe for one minute that a truck bomb cause that much damage to that building. Why were all the other government employees in the building and not one FBI agent or ATF terriost in the building at the time of the explosion? How come there was no other devastation to surrounding buildings. Mighty big explosion to take down a whole building and just that one. There where reports of other charges in the building then nothing else heard about them (one way or another). I do believe that there was a truck bomb and the government terrorists new it was coming. I don't think that that truck bomb could of caused that much damage. What about the rumors about the the no longer need for the ATF? Could this be the way to save a no longer needed government terrorist agency? Why was the building so quickly removed? I would of liked to see more investagation of the way the building came down.

Yes people died I wonder how many lives where saved by this dastardly deed. In standoffs with the United States terrorists (FBI, ATF, DEA) since the building was blown up the government has been less likely to use deadly force like Ruby ridge and WACO! Its funny how people don't remember the stand off in Montana weeks after the bombing. Nobody was killed. Thus the press doesn't have a field day with and thus we the American (sheep) public don't remember or even know about it. To the people in OK I'm sorry that you have lost loved ones and I'm sorry that April 14 is such a bad day for that part of the nation but the death of Tim McVeigh isn't the end of this and isn't true justice. To put it in a nutshell I don't beleive for one minute that his bomb did that much damage (it was a inside job)!
This is my opinion.

>
>I disagree that the influence of ARRL is best described as "ruling."

Please note words I used such as "almost," "de facto," and
in putting the word "ruling" in quotation marks.

Sorry to disagree, but the ARRL influence on the US amateur
radio community up to roughly 5 to 10 years ago was so strong
that it virtually "ruled" the ethics, procedures, and some
activities of that group. It was a de facto "rule" but not a
de jure rule. The FCC does the de jure rule part.

>>I'm not saying the ARRL is doing a "bad thing" with the above,
>>but denial of the most obvious quasi-offialdom of the ARRL for
>>decades is somewhat ludicrous.
>
>I would not have disagreed with the detailed explanation you offered, Len; I
>disagreed with the far-simpler summary that ARRL in any way governs amateur
>radio. Those governed by law have no reasonable choice but to follow the
>law; people still have the choice to follow or not follow ARRL's leadership or
>influence.

People have been turned away from the ARRL through many factors: The patronizing, implicit "we know what is best for you" attitudes (aka "Big Brother" or "1984" syndrome); constant bombardment of viewers/readers of ARRL text seeing the self-promotions (the "PBS pledging/membership" syndrome); at least a decade's worth of League Positions on FCC NPRMs (affecting amateurs) which were either dismissed or only partially adopted followed by ARRL publicity endorsing the changes post-facto as if they were "right" before the fact.

In June of 2000 the ARRL membership was only 23.9% of all licensed US radio amateurs. It could be more if the hierarchy would adopt some better "selling" techniques, get out of the eastern conservative environment more, recognize the rest of the radio world (beyond amateur activities) and admit that the ARRL is not infallible in Setting Policy for radio amateurs. One thing that could be toned down the continued reliance on "the past as prologue" of somehow being the bedrock for what is "good" in US amateur ethics (and even morals) and recognize that the whole of the radio world has changed and advanced despite all the "pioneering" done so many generations in the past. History is nostalgic and interesting but it is still history, something that happened long ago.

Hiram Percy Maxim was the first ARRL President and continued in that post for 22 years until 1936. During that time there was a great deal of radio pioneering done in and by the non-amateur radio world. From 1914 until into the 1960s there were several amateur radio organizations but the ARRL was the survivor. Was that due to some (mythical or mystical) qualities of leadership or was it due more to a constant self-promotional propaganda using its publishing arm to persuade membership? I'll let someone outside the ARRL determine that although it seems clear which one it was to me.

Doing as Carroll has done, to "call on (the spirit of HPM) to provide leadership" in this time looks more like a self-enobling effort to retain conservative amateur ethics of a past era. It is no different than in other newsgroups using the first USA leaders (the "founding fathers") as some kind of idealistic role-model to "prove" the users' viewpoint. Such is nonsense and mythos, the effort more spite expressed because others will not accept his particular viewpoints.

This is the new millenium, radio is 105 years old, the center of population of the USA is _west_ of the Mississippi, there are far more non-CB radios than there are amateur radios, the design center for amateur radios is in Asia and not centered around Chicago or Iowa, communication satellites have long since proven their independence of the ionosphere, mainframe computers of the 1970s have been made antiques by desktop and portable computers purchaseable in chain stores...and some still yearn for the "simplicity" of the 1930s and some imaginary gifts of "leadership" of long ago...and one organization cannot recognize itself when viewed from the outside.

>Surely you see the difference.

Between 2001 and 1936? Absolutely.

Please don't call me Surely. :-)

In article <20010429003757.12553.00000861@nso-ck.aol.com>, n2ey@aol.com (N2EY) writes another episode in another Endless Story:

<snip>

>>That was not a "faulty method." The "59" number value was the difference
>>between the total number of Technician license class increase in a ten-
>>month period and the number of new Technician licenses in the same
>>period.
>
>Which is a faulty method because it assumes, among other things, that ALL of
>the new Tech licenses issued in that ten month period stayed Technicians.
>Because you didn't have upgrade data available, you ASSUMED that the upgrade
>number was ZERO for that ten-month period. THAT is a FAULTY METHOD, Len.

I "assumed" nothing. I took the difference between the total number of Technician class licensees' increase and the number of NEW Technician class licenses granted came out to be 59. That was what I said. Simple artithmetic and a functioning calculator aren't "faulty."

What I see is just a lot of wordage (and considerable propaganda
and/or psywar tactics in newsgroups) to somehow "prove" that
that, indirectly, morse-code-tested radio amateurs are flocking to
HF as originally claimed. :-)

>KE3Z posted information derived from the FCC database showing

Directly from the FCC database?!? That database is about 55 MB
in size. What was the search program? Does it adequately
handle the differences between the old FCC database and the new
ULS database?

Seems to me it is easier to use Joe Speroni's tabulations.

<snip to the ending...>

>> I still hold to that observation regardless
>>of allegations of "faulty methods," "errors," or "mistakes" levelled by
>>long-timers who seem to wish things were otherwise.
>
>No. You made other statements in response to MY post which clearly contained
>faulty methods, errors and mistakes. You refuse, for some reason, to examine
>your mistakes, or admit to them.

God forbid I should ever respond to YOUR postings? :-)

I explained my method of arriving at an observation, gave the
numbers. Nobody disagreed with the numbers, therefore the
arithmetic seems to have met with approval.

I used a post-restructuring period (past April 15, 2000) for the
reasons given. Miccolis used PRE-restructuring numbers. Is
pre-restructuring data a "correct" method for post-restructuring
observation?. I don't think so. Miccolis' mileage varies...

The only significant change in US amateur radio licensing in
the POST-restructuring period to me is a number of already-
licensed amateurs got "higher" class licenses. The NEW,
never-had-a-ham-license-before, not-code-tested Technician
class licensees are still on the increase as they were before
April 15, 2000. At the end of May at least one out of three
US amateur radio licensees will be a Technician class (they
are just shy of that at the end of March 2001).

>Shall I post them AGAIN?

Knock yourself out... :-)

Quoting Lenny here: "Dick Carroll wants to return to the past for the
"simpler" time of US amateur radio . . . He can do so using only
ordinary, less-advanced vacuum tube technology of the 1930s, . . .
he will have to depend on OOK CW when using simpler equipment . . "

No, you have it ass backward as usual Lenny, it's the success of the
817 which is apparently luring a noticeable number of ops into running
cw who don't normally run the mode.

>
>It is all-mode (allocated) and

>

Hey Lenny, remind me sometime to get you up to speed on the realities of advertising. I venture to guess that 99% of the 817s sold never get anywhere near the trails. To answer the core question five watt radios don't squirt much of a signal on the HF bands so cw is preferable to the other modes for blatently obvious reasons.

And as Phil and others have pointed out...that ability
is NOT passed on to the locals.

And as I have pointed out, without PROOF of operation,
there is NO access.

>> And as Phil Kane noted before...the cop has NO
>> right to insect any station at all. Indeed,

Dwight:

What IF the person sez..."I don't have ANY such station. The
FCC only has a right to "inspect" if it knows or otherwise can
PROVE there is a station in the residence.

> If, during that inspection, an illegal device is
>discovered attached his station (one indication, in addition to the
>neighbor's complaint, that it has been used), the use of the illegal
>device in itself is a violation under HR-2346.

As before...
What IF the person sez..."I don't have ANY such station. The
FCC only has a right to "inspect" if it knows or otherwise can
PROVE there is a station in the residence.

> At that point, it
>really doesn't matter where the original non-conforming signal came
>from. Now, we could sit here and argue for days whether a device
>attached to a station, along with an interference complaint, is enough
>to prove that the device has been used, but neither of us will be
>certain until a number of these HR-2346 cases are resolved in the courts.

So far there isn't ANY such reliance on HR-2346 at all...thankfully.

>>   Dwight - analysis of enforcement cases for

>> sufficiency before they are brought is MY bag -
>> I was the Commission's expert on such things
>> for years and taught it at the Academy and in

>
> I understand that, Phil. However, as I said earlier, these cases
>will be somewhat different than the ones you were involved with at the
>FCC (misdemeanor, smaller fines, etc).

You got that right. Whatever mistakes may have
been involved with actual FCC enforcement personnel
are far more likly to happen with local law enforcement.

Cheers,
Bill K2UNK

Yup. Go to some of their fringe web sites. Some of them have encrypted
home pages. Need the code and the key just to log in. Nothing new
here.   What you got is probably a reference to a decryption of a packet
radio signal. Or someone is jerking the NSA's chain.   ;)

No, but it certainly would be helpful if the word "influence' Applied.

Oh, Balderdash!!! every ARRL official who has spoken on the issue has
said some version of it! You are NOT doing your credibility any good by
ignoring it all.

Are you nut bags magnetically attracted or something? You certainly come
out of the wood work when one of your fellow mentally deficient somewhat
humans say something stupid.

Think of it this way, they LEVEL buildings with far less explosive than what he was believed to have in the truck.

There was video proof of him driving the truck that was known to be the point of the blast.

He had receipts for the deisel and fertiliser, not to mention he was in possesion of other bomb making materials when he was picked up.

Did you think that perhaps there wasn't an ATF or FBI office in the building?

And all that aside, he admitted to the bombing!

>
> Section 1983? What is the CFR or USC cite?

The full cite is "42 USC 1983" - which is the right of a citizen (or other person) to recover civil damages against a government entity for the infringement of one or more Constitutional rights on account of malice or extreme negligence by that entity in not preventing the rights violation while carrying out some other duty. Usually the violation comes about by a policy, custom, or usage which does not sufficently protect the right, including a specific failure to train the government entity's personnel regarding law, regulation, or criminal procedure, or intentionally training them in a procedure which regularly violates a right.

Feel free to read the actual text of the statute for the proper legal definitions, etc.....

A real example would be that of a city attorney simply sending notice of a criminal misdeameanor filing to the defendant, using regular U.S. mail to an address for the defendant supplied by the alleged victim without any step to actually ascertain that the address used does in fact pertain to the defendant. In addition to being defective process service (i.e. no proof of delivery), should the address be incorrect, it violates the defendant's Sixth Amendment right of notification ("nature and cause of the accusation") should a subsequent bench warrant for "failure to appear" be issued.

[The real case I am thinking of resulted in an immediate dismissal with prejudice once the defendant had been made aware some 3 years later of the complaint. Since misdeameanor complaints only have a 120 period of limitations for service in the State involved, the "speedy trial" and many other violations occurred as well.]

In the radio context, a problem would be an improper seizure of equipment (e.g. a 10m rig possessed by a licensed amateur) under this "local CB enforcement authority" because the local cop was never trained on the difference, or was trained and simply didn't care (the latter being a stronger case).

In reality, it is perfectly legal to OWN a 10m rig without being
an amatuer. Many of us did so before we actually were
licensed. The issue, as always, comes back to USE (i.e. operation).
Simple possession of a "legal" ham rig wouldn't stand up in
court without concurrant USE of that rig as an illegal
CB operator.

Cheers,
Bill K2UNK

In our far distant past, hams were focused on being able to design and build
equipment using the technology of the day. If Larry, our most elite, has lost
that ability, are we all doomed to obscurity?

If there was a 1% increase, sales are up, Jim, not down.

The record does not support your conclusion. Prior to restructuring, there has been about a 0.5% decrease in the number of hams. If you could see a 1% increase as "sales are down," then you can imagine the "precipitous drop" that was forcast by some with that 0.5% decrease. :-)

You mean several of "them," don't you, Dick?  I believe that people passed
their exams by a combination of studying, memorizing, lucky guessing and just
plain hoping that a few subjects did not appear on their exam.

Did you really mean me when you used the term "severall of you?"  If so, was
your misuse accidental, deliberate or did you really see only the word
memorizing when you have read the several times I have had to repost my views
to clarify them to you?

I know of no ARRL official that has said that Amateur Radio needs warm bodies at all costs. I have heard them say that continued growth is important to the health of the Amateur Radio service in the face of increasing spectrum pressures.

I am sure the same words were spoken before you; did you really hear them the way you have twisted them here?

And when was the last time the police kicked in your door and busted you for smoking a "joint," Cecil? If that were the end of the story, I don't think a soul in the world would care. However, the drug problem doesn't end with just that "joint" in the home. For example, somebody had to transport that drug for you to smoke - and we all know the problems associated with the illegal drug trade. Likewise, for every person you can show who uses drugs as responsibly as you claim, I can show ten others who have not - our jails are full of them (so your example of responsible drug use is certainly not at all the norm).

By the way, when your said that "drugs [plural] can be used responsibly," are you saying that all drugs can be used responsibly, or just the one drug used in your example? I've noticed in previous discussions that you like to offer only one example (marijuana) when advocating the legalization of plural drugs. If your intent is to advocate the legalization of plural drugs, lets get off this marijuana smoke-screen and talk about the more serious drugs. For example, I'd really love to see you explain how crack, cocaine, or heroin, can be used responsibly.

Anyway, back to your comments. Why would one want to use marijuana to enhance sex life for marital bliss? Almost any man should be able to keep a wife happy without first using drugs to mess up her mind. And how can you say that you used marijuana responsibly when you used that illegal drug with children in your home - children who would have lost their mother and father if that illegal activity resulted in a jail sentence? Doesn't sound even remotely responsible to me.

>Please note words I used such as "almost," "de facto," and
>in putting the word "ruling" in quotation marks.

It's pretty irritating when someone ignores that, isn't it, Lennie? Don't know how many times I have done THAT VERY THING only to have YOU tear it apart as "fact" or "precise".

Perhaps if you will follow ONE set of "Message Point" rules we can all exchange comments on the same basis?

>People have been turned away from the ARRL through many
>factors:

No one, to the best of my knowledge, has EVER "been turned away" from the ARRL. Now if you mean they have been "put off" or disenfranchised", perhaps you might be a bit more accurate.

>Was that due to some (mythical
>or mystical) qualities of leadership or was it due more to a
>constant self-promotional propaganda using its publishing
>arm to persuade membership? I'll let someone outside the
>ARRL determine that although it seems clear which one it
>was to me.

Perhaps they simply delivered that which they promised.

>>Surely you see the difference.

>Between 2001 and 1936? Absolutely.

>Please don't call me Surely.

Well Surely you can tell the difference between your opinion and facts?

I doubt it, but it's worth a try.

The concern was safety. The closest, most reliable equipment is
probably best.

Per my response to Kim: You can have all of the opinions you like whether they are based in fact or knowledge or not. You can form an opinion based upon revelations divined from sitting under a pyramid while holding a crystal in your palm. There are in existence numerous bad or invalid opinions. :-)

Didja get that Extra out of the box yet?

Dwight Stewart wrote:

> And when was the last time the police kicked in your door and busted you for smoking a "joint," Cecil? If that were the end of the story, I don't think a soul in the world would care. However, the drug problem doesn't end with just that "joint" in the home.

That's a Catch-22, Dwight. "Bad things might happen because it is illegal." Sounds like "1984" to me. You could argue that the alcohol problem doesn't end with just that drink in the home.

Just because someone may use a gun irresponsibly is not a good reason to take away my guns.

Just because someone may use marijuana irresponsibly is not a good reason to take away my marijuana.

Those two arguments are conceptually identical.

> By the way, when your said that "drugs [plural] can be used responsibly," are you saying that all drugs can be used responsibly, or just the one drug used in your example? I've noticed in previous discussions that you like to offer only one example (marijuana) when advocating the legalization of plural drugs. If your intent is to advocate the legalization of plural drugs, lets get off this marijuana smoke-screen and talk about the more serious drugs. For example, I'd really love to see you explain how crack, cocaine, or heroin, can be used responsibly.

I talk about my experiences, Dwight. I've never used crack or heroin. But, when I was younger, half of Silicon Valley used cocaine. I used it responsibly. I knew it was addictive so I didn't use it often enough to become addicted. What do you think the world did before cocaine was made illegal? Coca Cola once contained cocaine. Education, knowledge, and treatment are the keys to the drug problem, not the war on drugs which has turned out to be a war on private citizens.

> And how can you say that you used marijuana responsibly when you used that illegal drug with children in your home - children who would have lost their mother and father if that illegal activity resulted in a jail sentence? Doesn't sound even remotely responsible to me.

Again, just because unfair laws exist doesn't make it right. There is wholesale violation of the drug laws and citizens are losing respect for the government that is enforcing them. Most of my friends at all the CA companies I worked for used illegal drugs. Do you avoid oral sex with your wife just because it is illegal? Do you teach your kids that missionary style is the only proper position for sex?

```
The purpose of the drug laws is not to keep people from using drugs.
Their purpose is power, control, and confiscation of private property.
If we don't stand up for our rights, we are going to lose them.

I found little in your comment to agree with since it consisted mostly
of a question. Certainly your post addressed the material concerning
credentials because you questioned whether specific credentials should
be required.

Let's see if we happen to be in agreement. Would you agree to the
statement, "Larry Klose has no experience as an attorney, no experience
in the formulation of U.S. foreign or domestic policy and little
experience as a radio amateur."?

>There are no state militias, there are only "paramilitary organizations"
>that claim to be state militias.

I beg to differ. Please refer to "www.sgaus.org." This is the site for the State Guard Association of the United States.

Many states (of which Tennessee is one) have state militias such as the "Tennessee State Guard", "Georgia Defense Force", etc, that are LEGALLY CHARTERED state militias and organized under the authority of the Adjutant General of the various states.

These organizations recognize the Governor as the Commander in Chief of thier specific organization, have NO federal role, and may not be deployed or mustered as federal units, and comply with the various orders and regulations of the parent force, usually the National Guard.

They are the ONLY legal "militias" in the United States, unless you care to also count the United States Coast Guard Auxiliary and the United States Air Force Auxiliary (CAP) as part of those organizations. Both are "paramilitary" organizations, but DO have a federal role and are under the control of the parent organization. (USCG and USAF)

Neither. That particular expression is one of the more inert ones I've seen used here. Now if on the other hand he had called you a doofus, then that would have made me really mad. :-)

> You're right. And we also love to assign blame today. Few seem to understand that accidents happen all the time, but that does not necessarily mean someone at fault. It reminds me of the woman who sued the city because a tree limb fell on her during a wind storm (the tree was on city property). I cannot imagine how anyone could hold the city responsible for a wind storm or tree limb. However, the court did exactly that - the woman won.

Standard tort law - a property owner has a duty of care toward passersby or persons on the property - lawfully or otherwise - to maintain the trees in such condition that a wind storm would not break off a limb and cause injury.

This is the kind of case that everyone studies in first-year law school.

(I'm surprised that the city didn't settle outright - that's why cities carry insurance. Perhaps the amount of the claim was outrageous and therefore the city litigated THAT issue.)

> CB operator.

No kidding. You asked for an example. The law (HR-2346) makes USE illegal. My example intentionally showed a misapplication of the law because you asked what would constitute a violation that leads to a 42 USC 1983 suit..... Clearly, the cop in my example disregarded what the law said ("illegal use" and "FCC licenseholders exempt") and acted anyway.

I disagree. It is an amateur issue should an amateur be "misclassified" as a CB'er and [improperly] subjected to the law. That's why some of us are bitching about it. The average person doesn't know the difference. It gets worse when considering that there is an overlap of equipment used in both services.

How 'bout we do a trial run first. We'll move Charlie Manson from his
accomodations here California over to your house, and you can watch
after him 24/7, and you can pick up his tab.

Sound pretty good?

Agreed! This is one of the main reasons for the hostility some amateurs display
towards CBers.

> That's why some of us are
>bitching
>about it. The average person doesn't know the difference.

A problem the amateur radio service has suffered from for more than 30 years. The general public does not think more highly of radio amateurs because of this confusion.

> It gets worse
>when
>considering that there is an overlap of equipment used in both services.
>

Except for antennas, transmission lines and power supplies, what equipment is used in both services? CB equipment must be type accepted for that service. Modifying it for ham use means it is no longer cb gear.

Why would an amateur give a rip about what CBers do? I couldn't care less, just as I don't care what FRS or GMRS or any other xxRS does. It's the FCC's job to take care of, not mine, not the local deputy Barney Fife, nor the USCG Auxiliary.

Lots of STUFF to do at www.ab7sl.com such as...

Downloadable IOTA List - updated 30-Apr-2001
- on IOTA List Page of site listed above

All - NEW - W9INN antenna page!!

1. Ham Radio Links (some unusual)
2. Several Ham Radio Web Rings !
3.AB7SL Biography
4.Personal Photos
5.Station Description
6.Software Page (downloads)
7.The DX Page (w / Live - DX cluster links)
8.Downloadable IOTA List (updated weekly)
9.W7NH - Elmer Tribute
8.Prescott Arizona Photos
9.Online DX Logbook
10.3D Art Gallery (downloads)
11.Music Page (downloads)
12.Frequently Asked Questions
13.Free-For-All Links Page
14.Guestbook
15.Many Equipment Photos
16.Downloadable DXCC Countries List
17.Downloadable ITU Prefixes List
18.W9INN Antennas Page

On Mon, 30 Apr 2001 03:43:55 GMT, Bill Sohl wrote:

>>The attorneys at the FCC who helped to write HR-2346 were wrong.

The only function of the attorney at the FCC (with whom I have been on a first name basis for over 20 years) was to make sure that the FCC wasn't being stabbed in the back too badly by this dilution of jurisdiction (so he told me).

>>The attorneys on capital hill who sponsored the bill were wrong.

  The only consideration of the above was to mollify the good burghers
  of Beloit, Wisconsin who badgered Sen. Finegold until he put the
  original bill in. The rest of the process was the usual "you
  co-sponsor mine, I'll co-sponsor yours" bill-rolling.

  (And after all the hoopla, why hasn't Beloit passed a local
  ordinance??)

>>The attorneys on capital hill who voted to pass the bill were wrong.

  Members of The Congress know not and care less about CB
  enforcement, which to them has less importance than does
  cleaning the manhole covers in a Federal parking lot. Those
  who did even look at it saw it from the "enlightened" standpoint
  of "good, they can do the work and we won't have to pay for
  it".

>>The attorneys who handed the bill to the president to sign were wrong.

  IIRC that sort of work is done by a clerk who is performing a
  ministerial act, i.e. one mandated by law or procedure with no
  discretion or initiative required.

All of that effort was a complete waste
>>of time - the new law is absolutely unenforceable.
>
>I agree!

  Make that two.....

Under present law, it is perfectly legal to OWN a Texas Star CB
Linear Amp, as long as there is no actual or implied use.

>"simpler" time of US amateur radio . . . He can do so using only
>ordinary, less-advanced vacuum tube technology of the 1930s, . . .
>he will have to depend on OOK CW when using simpler equipment . . "

OOK CW is simpler technology. It was the simplest mode for
radio way back in time. What is it about that that is so hard to
understand?

>>I'm puzzled by the "scads of ops back into cw" as the "reason"
>>(implied) for the FT-817's success.
>>
>No, you have it ass backward as usual Lenny, it's the success of the
>817 which is apparently luring a noticeable number of ops into running
>cw who don't normally run the mode.

So, a wideband, ALL-MODE, portable transceiver "lures CW ops?"

There should be all sorts of QRP radios out there that feature CW
at slightly less price. Why aren't those more attractive to CW
ops?

>Hey Lenny, remind me sometime to get you up to speed on the realities
>of advertising. I venture to guess that 99% of the 817s sold never get
>anywhere near the trails.

Of course. There are very few SUVs on the road today that are
used off-road. (a non-radio analogy)

On the other hand, the Stoner Goral Company has sold a number
of little transceivers to private maritime users as well as amateurs.
Elecraft sells some nice little transceivers are comparable and lower
prices, too.

Since CW is primarily a mode used on HF by amateurs, why is
there a "reason" that CW ops would flock to an HF-VHF-UHF
ALL-mode, low-power transceiver? Why wouldn't they flock to
an HF-only transceiver?

>To answer the core question five watt radios
>don't squirt much of a signal on the HF bands so cw is preferable to
>the other modes for blatently obvious reasons.

Heh. Better check out the specs for the SGC products then.
:-)

>>The FT-817 won't fit into a shirt pocket but maybe a coat pocket.
>>Hopefull two pockets on the coat since the other pocket has to
>>hold the key and antenna wire. [it is 5.3"W x 1.5"H x 6.5"D]
>>
>. . . I have a couple two-pocket Eddie Bauer denim shirts . .

Don't all CW ops have brand name shirts with big pockets?
:-)

>>Was this all-mode, "all-band," portability state of the art in 1956?
>>If so, or not, how did such technology affect standards and
>>practices of that time, a whole generation after Maxim's demise?
>>
>Beats me, why would anybody care Lenny??

Dick Carroll seems to care a lot. He wants "leadership" a la HPM style when HPM led only from 1914 to 1936. Was there a lot of technology in radio back then compared to now? Were there a lot of modes, bandplans, standards and conventions then as compared to now?

Seems like the "standard" response from "CW ops" is that "return to yester-year" nostalgia when life was simpler, more straightforward, fewer options, and everyone was "in their place" following those who "knew better." As expected, I got one of those "replies." :-)

Shall I save some tuna tins for you, Brian? I can throw in a couple of 2N2218s and a color burst crystal. You can use those in a high-tech added-doubler-stage to be rockbound on 40m at 7159 MHz. :-)
